**LEVERAGING INNOVATION TO BECOME
AN ENERGY EFFICIENCY SUPERPOWER**

The United States is now an energy superpower - number one in natural gas production and soon to be number one in oil production. But what will it take for us to be an energy efficiency superpower? We have made great strides over the last 25 years, but other countries rank higher when it comes to energy efficiency. How do we close the gap?

We'll explore leading energy efficiency technologies, policies and business models that can accelerate progress in the United States and other countries - plus provide an engaging platform for networking and private discussions.
