# Minerals Sustainability Division Team (HQ)

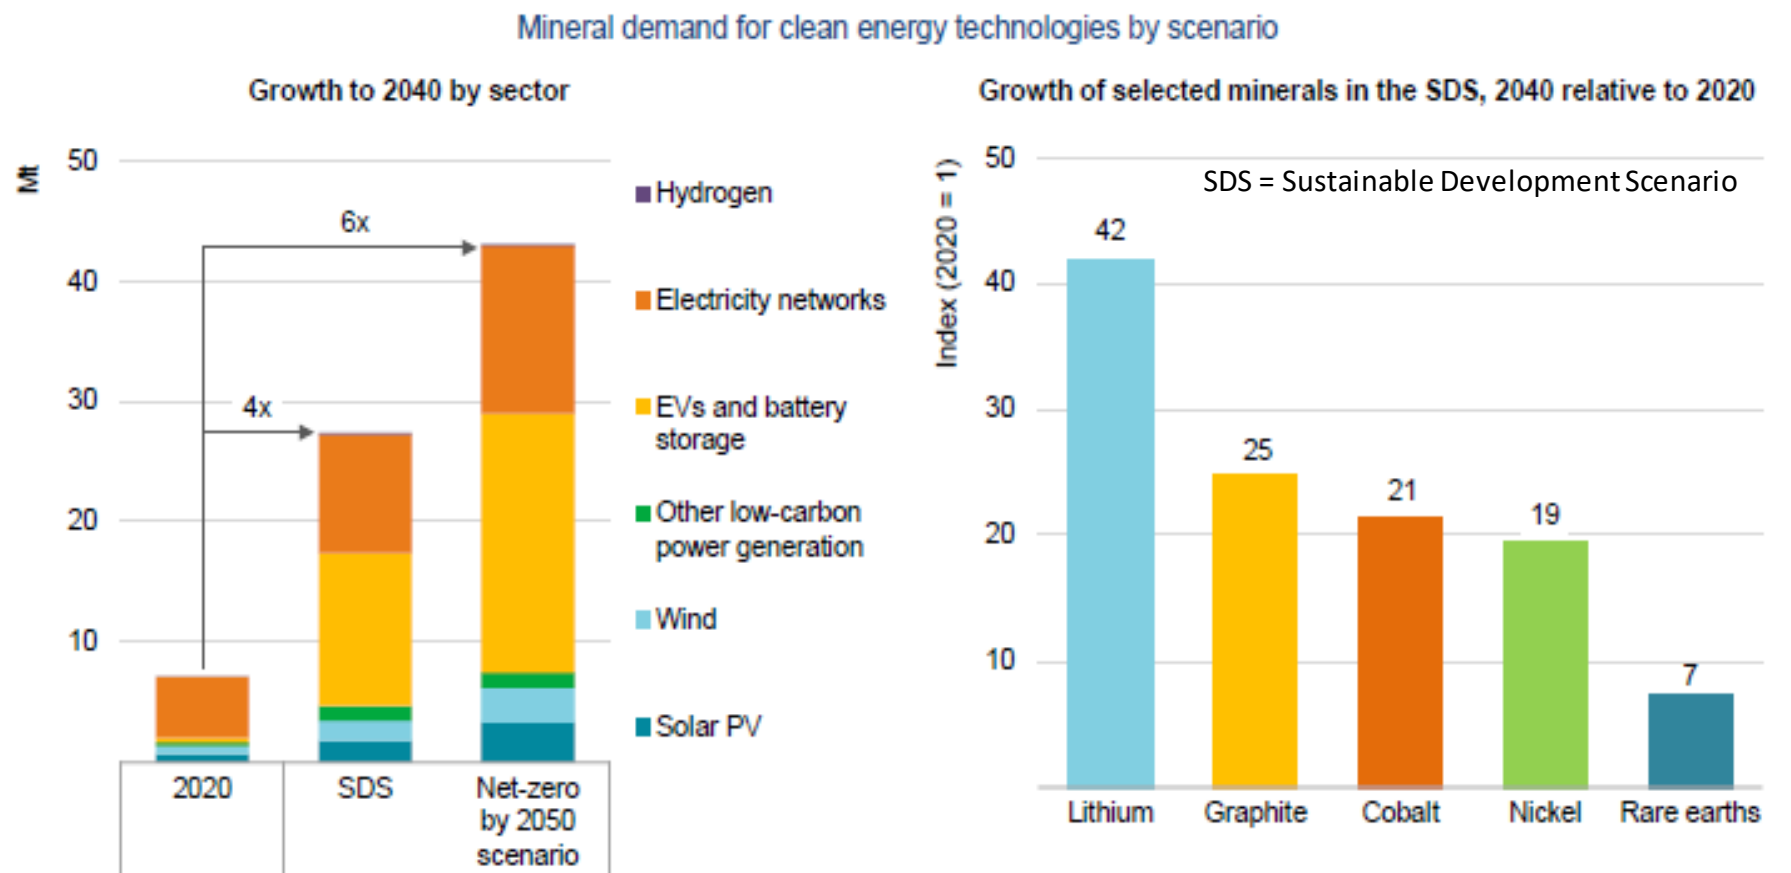

- Grant Bromhal – Director (Acting)
- Sarah Forbes – Director (on Detail to CEQ)
- Traci Rodosta
- Anna Wendt
- Evan Granite
- Savannah Rice

U.S. DEPARTMENT OF  
**ENERGY**

Fossil Energy and  
Carbon Management

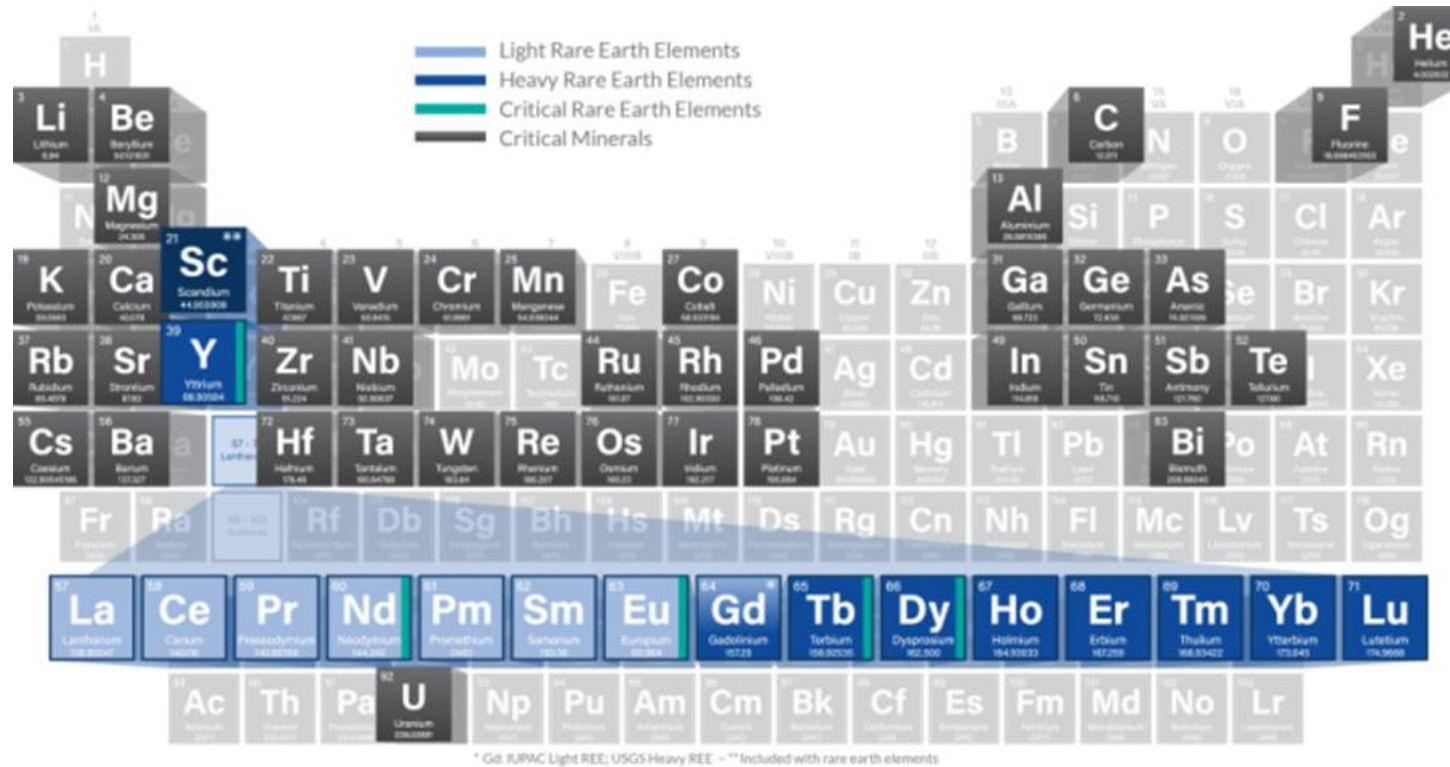

# Challenge: Significant Projected Growth for Clean Energy

Notes: Mt = million tonnes. Includes all minerals in the scope of this report, but does not include steel and aluminium. See Annex for a full list of minerals.

IEA, 2021

# Challenge: Lack of Domestic Supply Chains

- Import-dependent (>50% from foreign source) on 32 of 35\* critical minerals
- Import-reliant (100% from foreign source) for at least 14 critical minerals

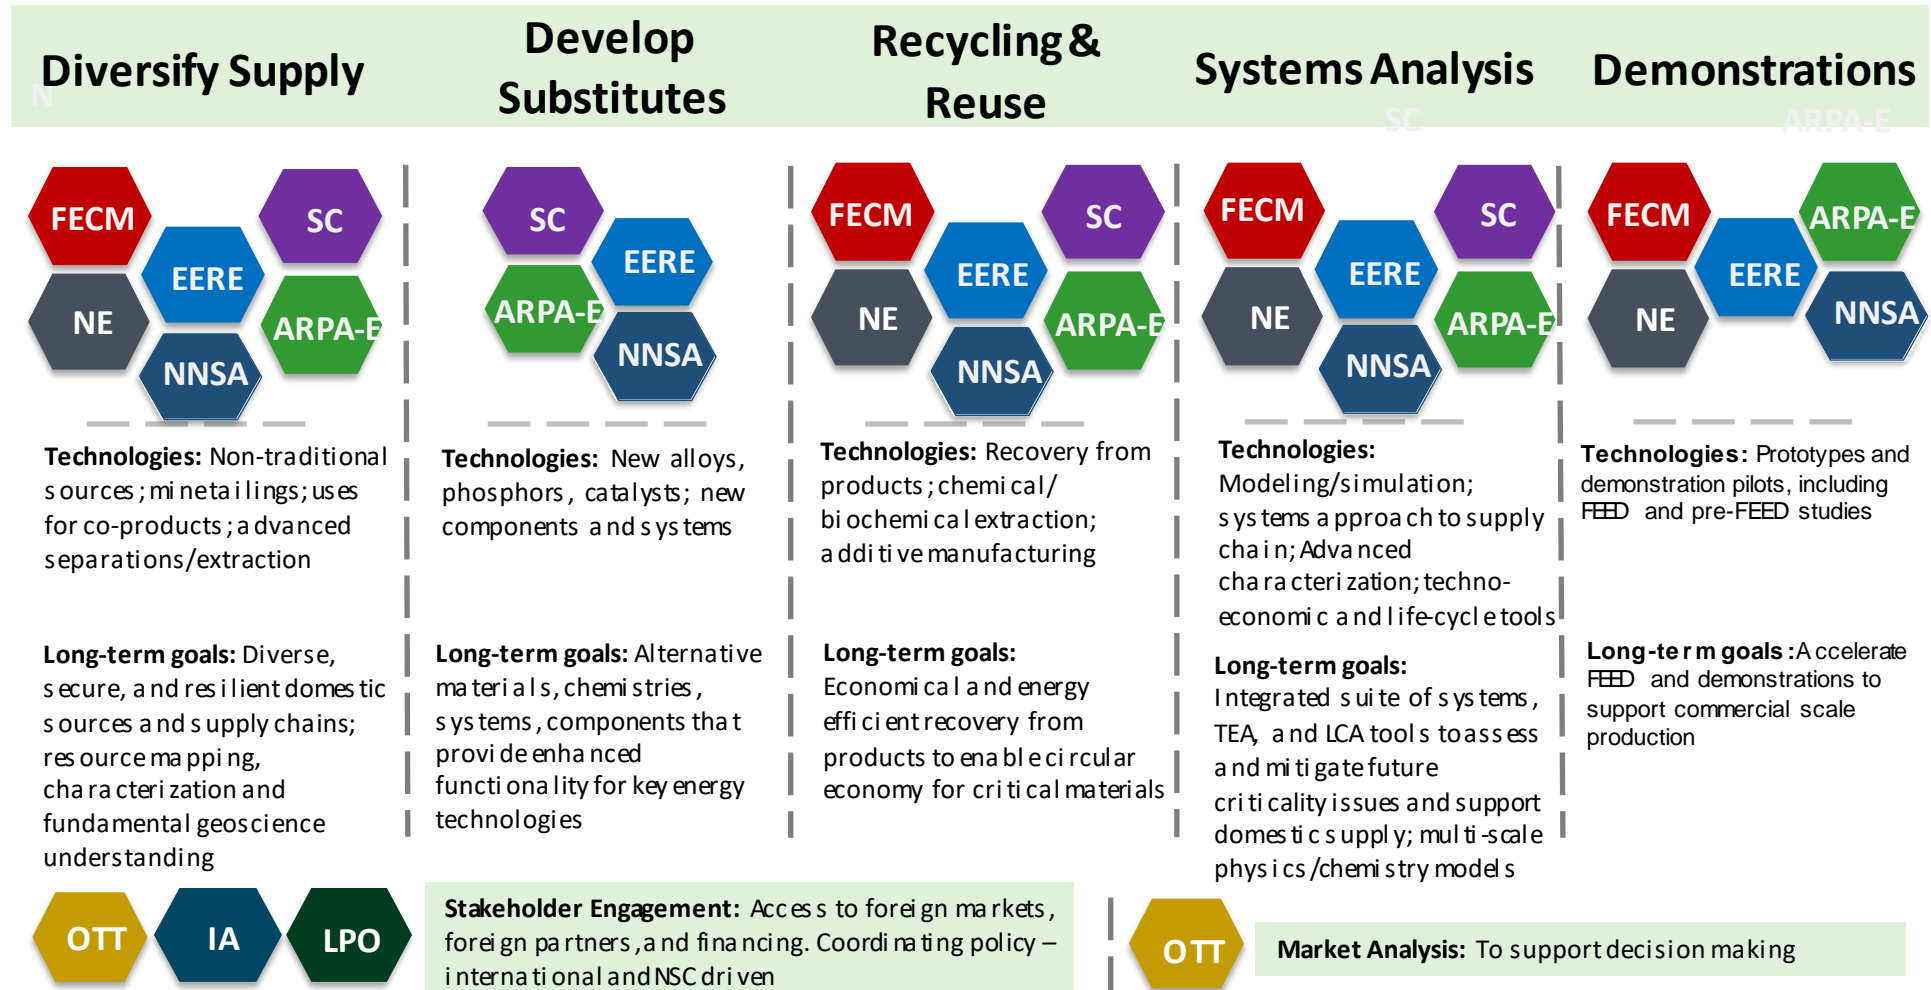

U.S. DEPARTMENT OF  
**ENERGY**

Fossil Energy and  
Carbon Management

\*Source: USGS Minerals Commodity Summaries

# DOE Strategy to Address Critical Materials Challenges

U.S. DEPARTMENT OF  
**ENERGY**

Fossil Energy and  
Carbon Management

# Government-Wide Engagement

- Minerals Sustainability Division (MSD) actively participates in the National Science and Technology Council (NSTC) Subcommittee on Critical Minerals
- Relationships with EPA and DOI (e.g., USGS and OSMRE) are critical to reaching our goals
- International engagements are important both on our technology development front, and in establishing standards for sustainability
- MSD Leadership in the ISO on Lithium and REE standards

NSTC Subcommittee Members

U.S. DEPARTMENT OF  
**ENERGY**

Fossil Energy and  
Carbon Management

# Minerals Sustainability Division—Vision and Mission

## VISION

To catalyze an environmentally and economically sustainable critical minerals and carbon ore resource recovery industry in the United States that will support:

- Clean energy deployment, including creating domestic manufacturing jobs;
- Secure, diverse, resilient, domestic critical minerals supply chains; and
- Environmental and social justice stewardship through co-production- and reclamation-based research and technology development.

## MISSION

To support the U.S. transition to a carbon-free economy and a domestic clean energy manufacturing industry by leading the federal government's efforts to:

1. Characterize and assess domestic critical mineral and carbon ore resources from fossil energy-related byproducts and related resources;
2. Develop advanced resource extraction, processing, and extractive metallurgical technologies; and
3. Evaluate the co-production potential of critical minerals and carbon ore for high-value products.

# Principles of Waste Minimization and Circularity

Reclaiming, recycling  
waste materials

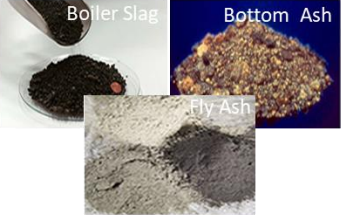

Maximizing use of  
feedstock materials

## Unconventional & Secondary Sources

Coal Refuse Piles

Coal Combustion Residuals

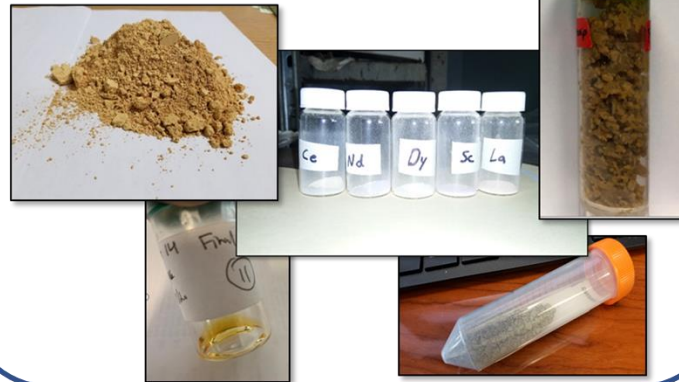

Acid Mine Drainage & Sludge

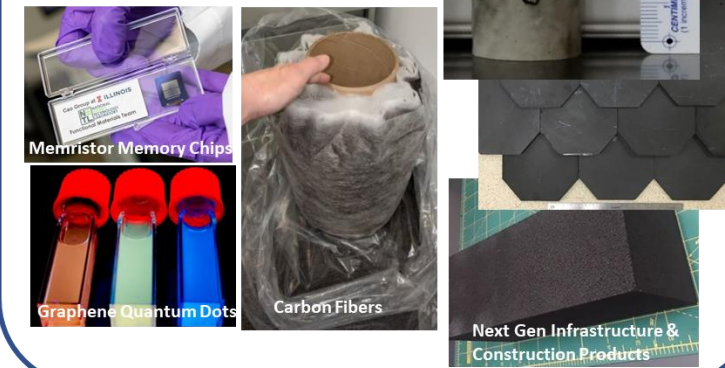

Produced Waters & Extracted Brines

## Extraction, Separation, and Processing of REEs and Critical Minerals

## Manufacturing of High Value, High Growth Carbon Products

U.S. DEPARTMENT OF  
**ENERGY**

Fossil Energy and  
Carbon Management

# MSD Strategy

## Pillar 1

### Resource Characterization & Technology Development

- Characterization for opportunities
- Resource assessment and predictive capabilities
- Web-based platform for integrated database system with AI/ML

## Pillar 2

### Sustainable Resource Extraction Technology Development

- Transformation, conventional and unconventional extraction technologies
- Integration of industrial beneficiation/concentration methods and technologies
- Remediation of existing sites and abandoned mine residuals

## Pillar 3a

### Processing, Refining, & Alloying Technology Development

#### Critical Materials

- Advanced extraction, purification, and reduction technologies through refining and alloying materials
- Enable commercial production through innovations
- First mover and second-generation large-scale pilot projects

## Pillar 3b

### Processing and Manufacturing Technology Development

#### Carbon Ore

- Housing and infrastructure development
- Advanced carbon material (carbon fiber, graphene, and nanomaterial) production
- Reinvest in critical (graphite and silicon) supply chains

## International Engagements, Standards and Supply Chain Development

### Ni, CO, Cr for Superalloys

- Identify co-production sources to meet increased demand in these metals
- Application of innovative processing, refining, and alloying technologies to increase purity from the waste materials

### Carbon Ore to Products

- Assessment and characterization of coal and waste materials
- Environmentally responsible extraction and beneficiation
- Co-production of high purity carbon and critical material products

U.S. DEPARTMENT OF  
**ENERGY**

Fossil Energy and  
Carbon Management

# Pillar 1: Resource Characterization & Technology Development

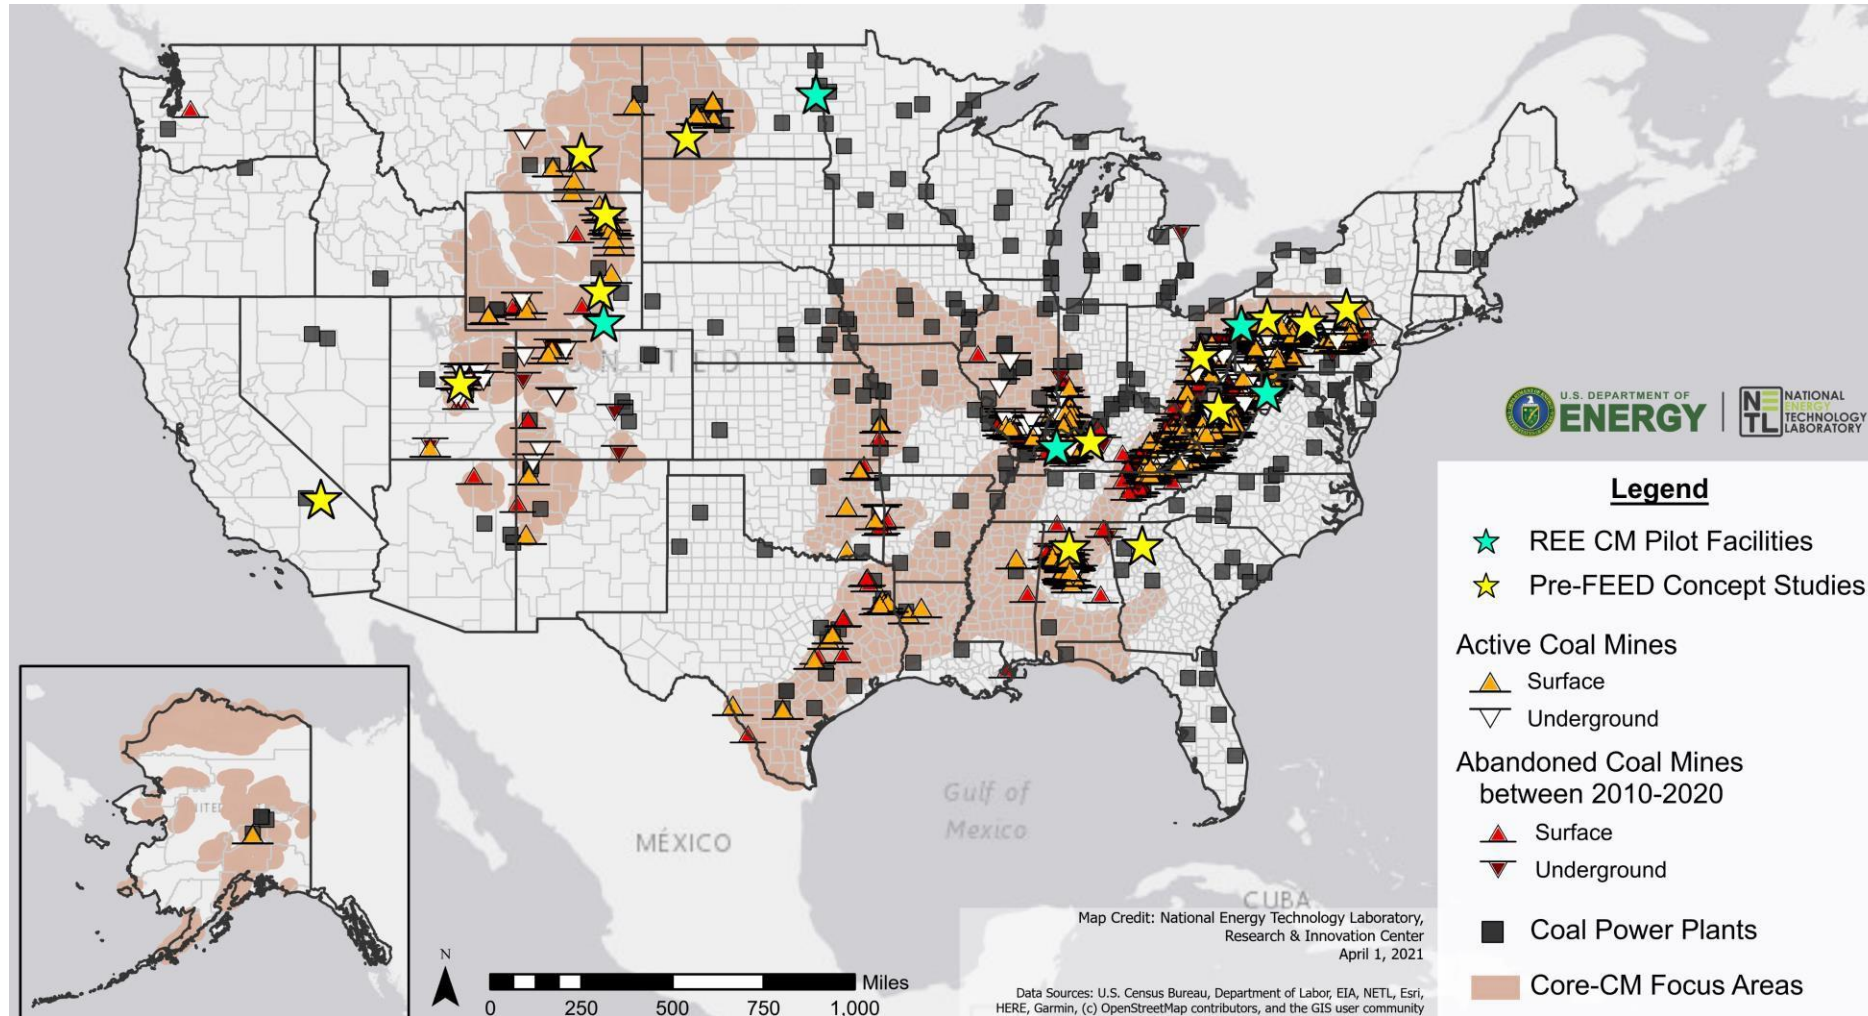

## **Resource Characterization & Technology Development**

---

- Characterization for opportunities
- Resource assessment and predictive capabilities
- Web-based platform for integrated database system with AI/ML

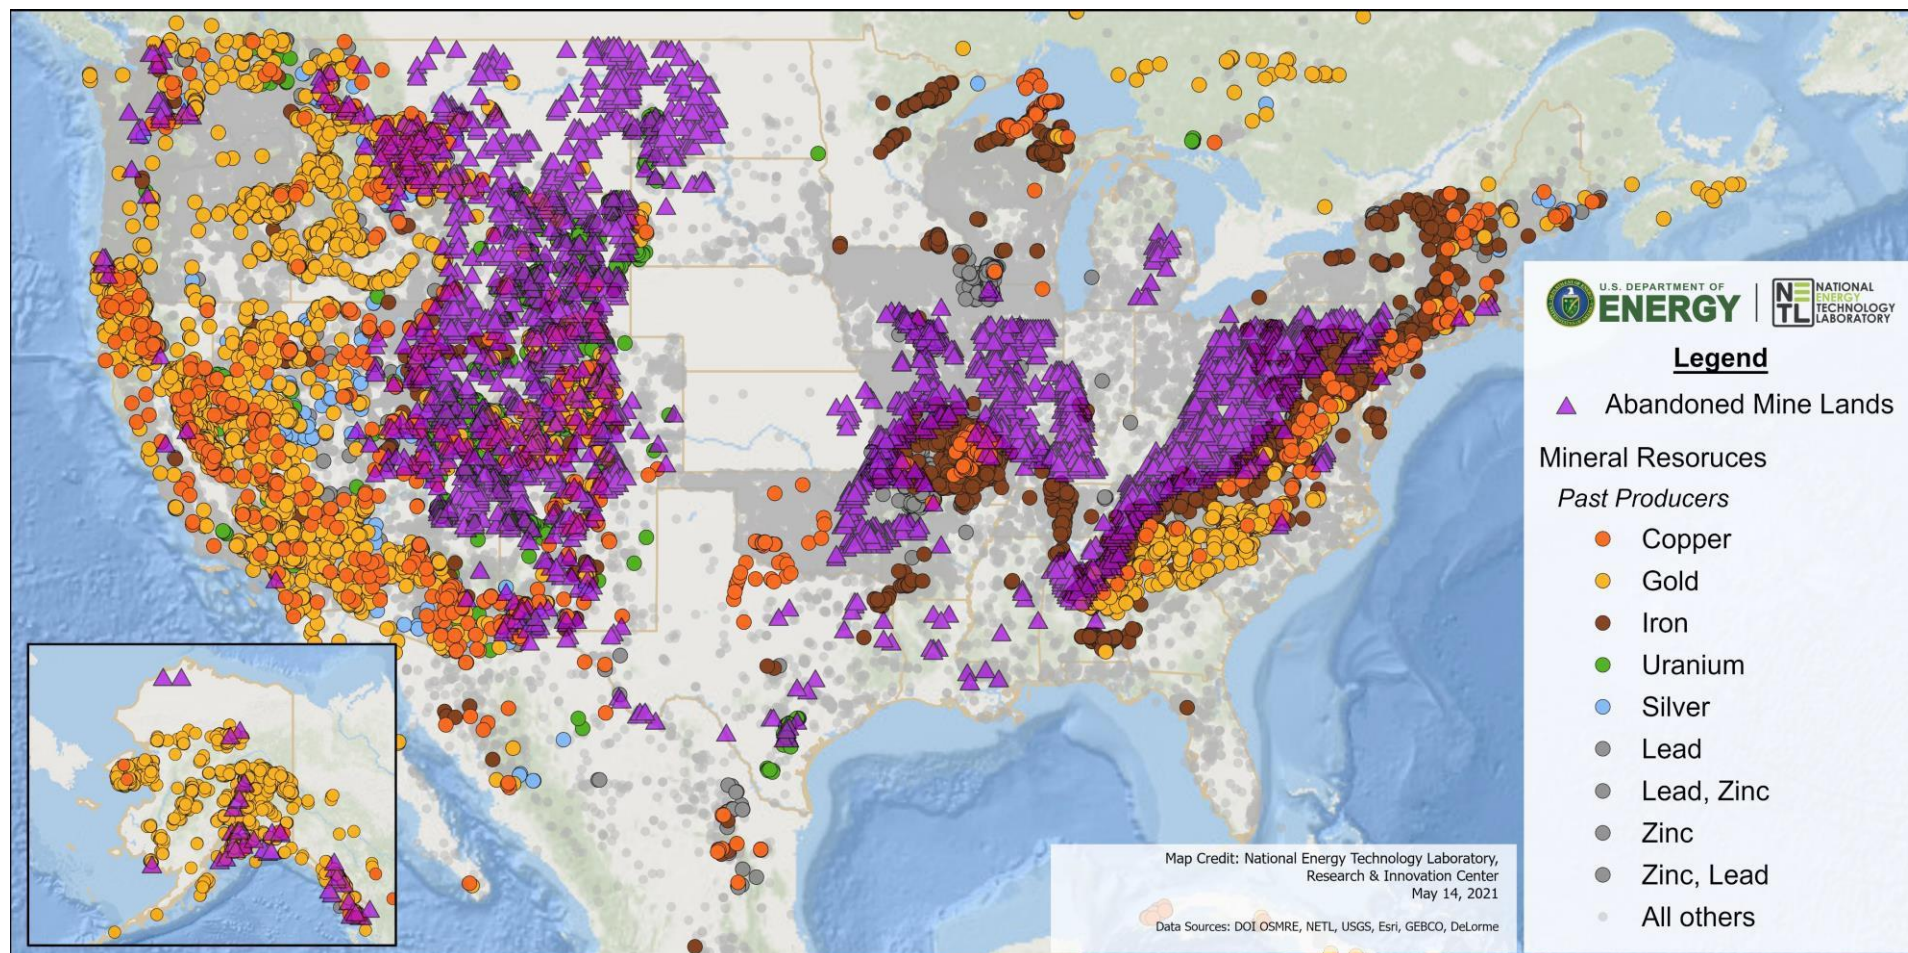

# Unconventional and Secondary Sources Opportunity

U.S. DEPARTMENT OF  
**ENERGY**

Fossil Energy and  
Carbon Management

# Abandoned Mines Opportunity

USGS MRDS lists 64,883 sites as past producers, inactive metal mines

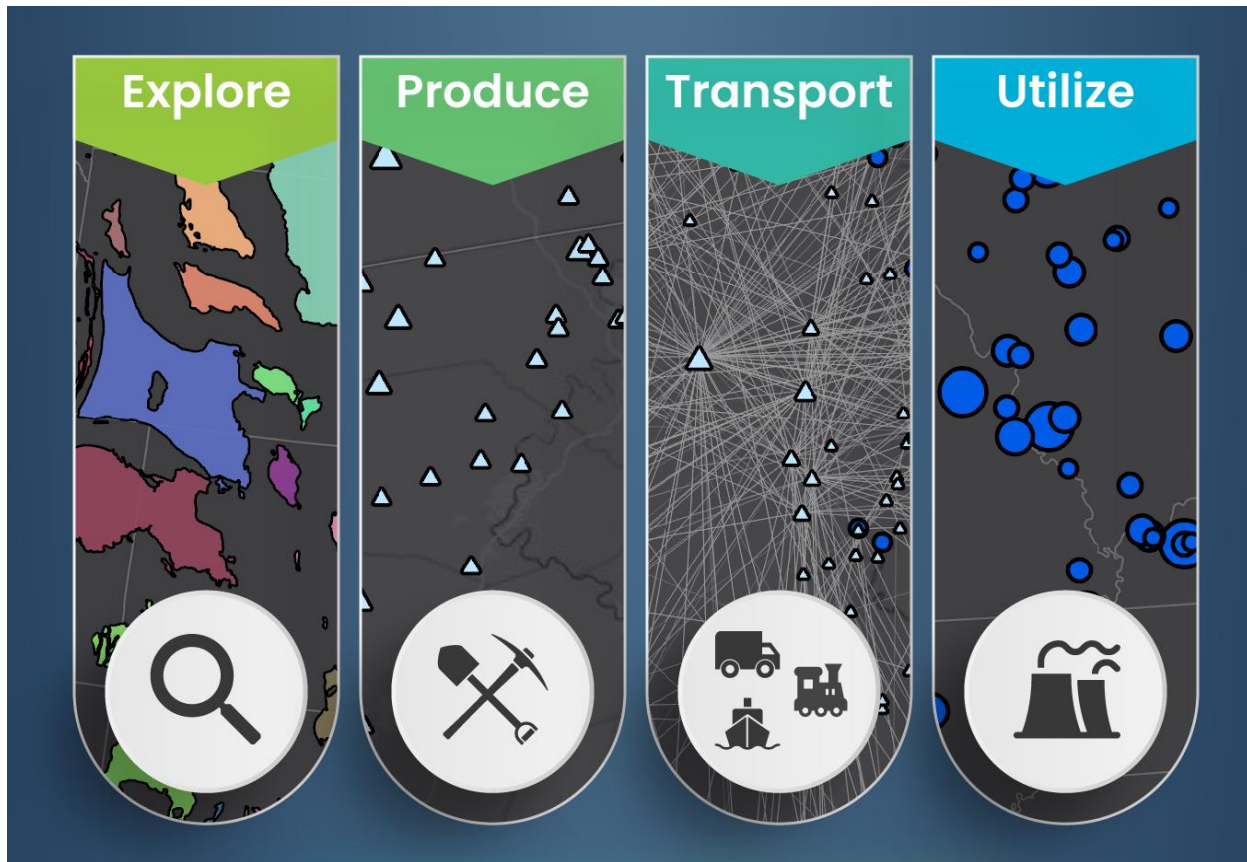

U.S. DEPARTMENT OF  
**ENERGY**

Fossil Energy and  
Carbon Management

# The Importance of Data

## URC Assessment Method: Developing a Geo-data Science Driven Approach to Assess REEs in Coal and Related Feedstocks

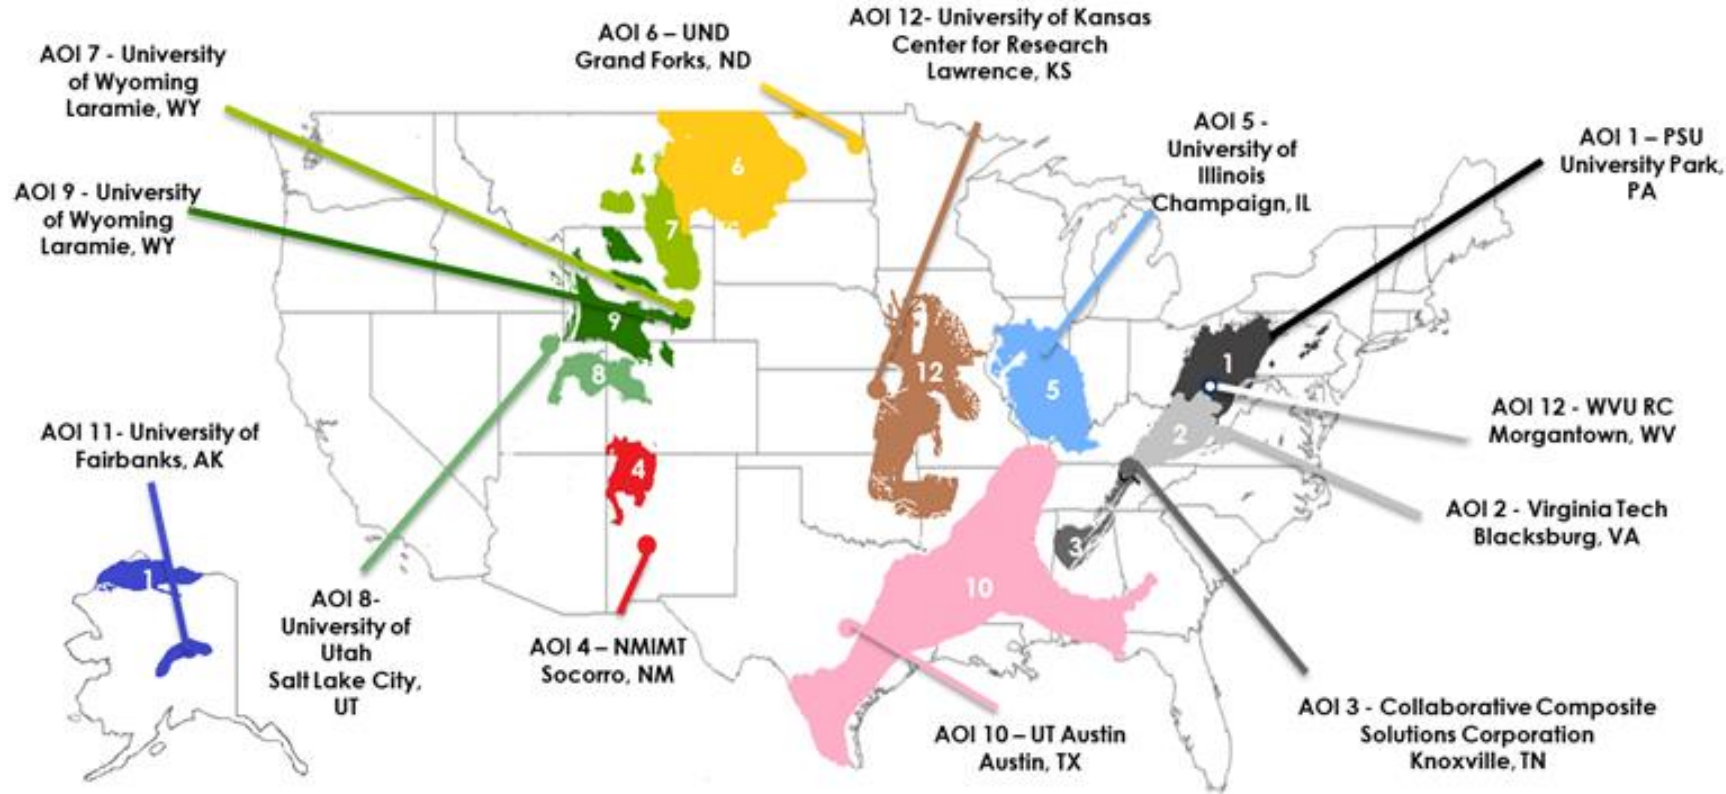

- Systematic data driven approach for identifying REE deposits in sedimentary rocks
  - Identify domestic deposits to unlock the potential for a domestic supply chain
  - Predicting REE Resources from Byproducts

Federate databases across the government

# CORE-CM Regional Initiatives

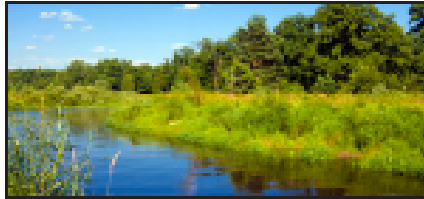

Building coalitions to develop and implement strategies that accelerate and realize the full economic potential of carbon ore and critical minerals across the U.S.

Regional  
Innovation  
Centers

- Address the upstream and midstream CM supply chain and downstream manufacturing of high-value, nonfuel, carbon-based products, ores and critical minerals (feedstocks, infrastructure, regulations, workforce)
- Co-located with economically stressed communities in need of clean energy jobs and will provide the foundation for educating next generation technicians, skilled workers, and STEM professionals.

# Pillar 2: Sustainable Resource Extraction Technology Development

## **Sustainable Resource Extraction Technology Development**

---

- Transformation, conventional and unconventional extraction technologies
- Integration of industrial beneficiation/concentration methods and technologies
- Remediation of existing sites and abandoned mine residuals

# Extracting the Most from a Variety of Feedstocks...

## A Daunting Problem

Other Potential Feedstocks

- Large Number of Possibilities
- Relies on Expensive Sampling Data
- Addressing Multiple Similar Feedstocks
- Predict Location of Best Materials
- New Approach – Machine Learning/Artificial Intelligence

Coal and Coal  
Byproducts

Produced  
Water

Mine  
Tailings

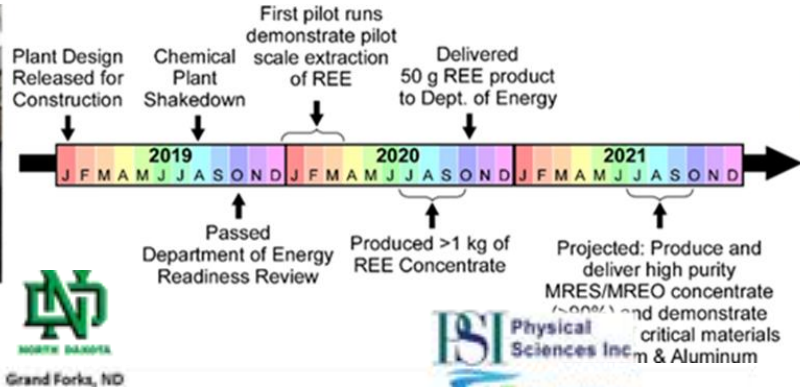

U.S. DEPARTMENT OF  
**ENERGY**

Fossil Energy and  
Carbon Management

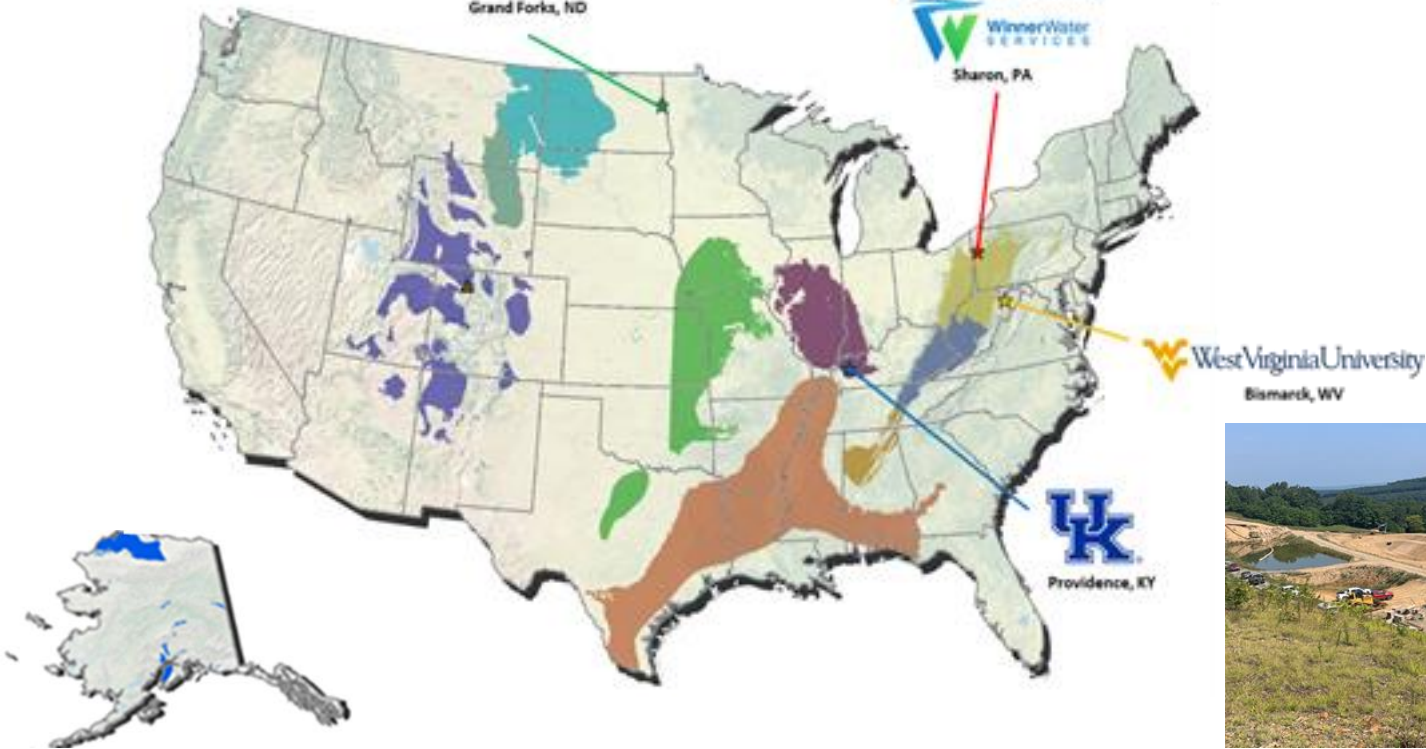

# Small Scale Pilots—Proving Technical Feasibility

Former Westinghouse Torpedo Manufacturing Facility (Dec 2018)

REE Recovery Pilot Plant (Jan 2021)

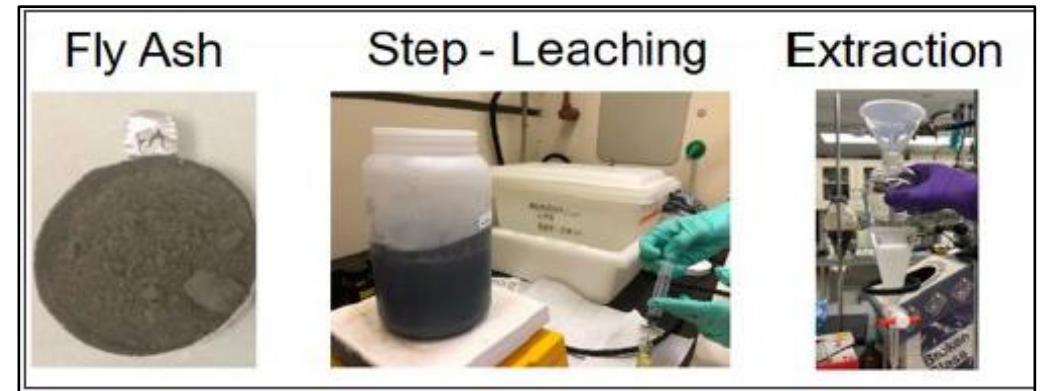

U.S. DEPARTMENT OF  
**ENERGY**

Fossil Energy and  
Carbon Management

# Key Extraction Targets

- **Develop and validate** extraction technologies for unconventional feedstocks
  - Coal and coal byproducts
  - Produced and waste water
  - Other feedstocks
- Catalyzing development of **transformational technologies**
  - Reducing toxic chemicals
  - Targeted extraction (e.g., drilling, in-situ leaching, biomining, agromining)
  - Novel filters/membranes
  - Application of AI/ML technologies
- Combined **remediation** and extraction
  - Critical Minerals
  - Carbon Ore
  - Maximize Value of All Byproducts
- Generate **best practices** to prioritize
  - Risk assessment
  - Resource concentration
  - Sustainability

# Pillar 3a: Critical Mineral Processing, Refining, and Alloying Technology Development

## Processing, Refining & Alloying Technology Development

---

### Critical Materials

- Advanced extraction, purification, and reduction technologies through refining and alloying materials
- Enable commercial production through innovations
- First mover and second-generation large-scale pilot projects

# Significant REE Production Potential Demonstrated

## From Small Scale Pilots

	Coal <sup>1</sup>	Coal Refuse <sup>2</sup>		Coal Combustion Ash <sup>3</sup>			Acid Mine Drainage from Appalachian Basin <sup>4</sup>	
	Domestic Production in 2016 (tons)	Actively Produced (Appalachia)	Landfilled	Actively Produced (2016)		Landfilled (Since 1991)	Sludge	Raw AMD
				Flyash (tons)	Bottom Ash (tons)	Coal Combustion Products		
Resource Estimate	728,000,000	~360 million ton	Estimated 2 Billion Tons in PA Alone	37,800,000	10,100,000	~1.5 billion tons	Unknown.	1.5 to 6.6 million gpm
Assumed REE Concentration	at 62 ppm low side <sup>5</sup>	62 - ~700 ppm (Low Estimate 62 ppm)		80 - 1200 ppm (~400 ppm average) <sup>6</sup>			~660 to 750 ppm (708 ppm average)	< 0.5 ppm
Potential REE Produced (tons /year)								
100% Recovery	49,800	24,600	136,700	16,670	4,450	661,000	-	807 - 3560
50% Recovery	24,900	12,300	68,300	8,330	2,230	331,000	-	404 - 1780
20% Recovery	10,000	4,920	27,300	3,330	891	132,000	-	161 - 711
Challenges	Most of the coal is combusted	REE concentrations can vary greatly between layers within a coal seam This variation can translate to variations within the coal.		REE concentrations vary greatly depending on the coal that is combusted within the power plant. The combustion process increases the concentration of REEs in the combustion ash but also makes it more difficult to extract.			Acid mine reclamation sites are distributed throughout a region.	Very low concentrations of REE.

# Assessing Economic Feasibility at Larger Scale

## Large-Scale Pilots-

Pre-FEED studies for 1-3 tonnes/day MREO for individual separation through metal production

Contractor	Feedstock	Region of Feedstock
West Virginia University	Acid Mine Drainage	Northern/Central Appalachian Coal and Montana Copper Mine
MP Materials	Refuse Heap Leaching	Kentucky Coarse Mine Refuse and AMD Sludge
Energy Fuels	Coal Measures Sediments (Existing Mine)	New Mexico
University of North Dakota	Lignite (Existing Mine)	North Dakota
Winner Water Services	PCC Fly Ash	Georgia - Plant Gorgas
Tetra Tech - PA	Appalachian Underclays	Pennsylvania
Texas Minerals	Appalachian (Anthracite) Underclays	Pennsylvania (Luzerne County) and Jeddo Coal Eckley North
Materia USA	Appalachian Underclays	Pennsylvania (Clearfield County)

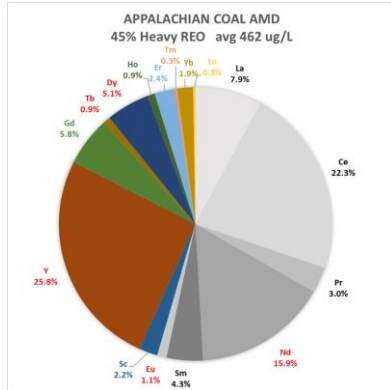

U.S. DEPARTMENT OF  
**ENERGY**

Fossil Energy and  
Carbon Management

# Example: CM/REE Integrated AMD Project

## Field validation of an integrated AMD treatment and CM/REE plant:

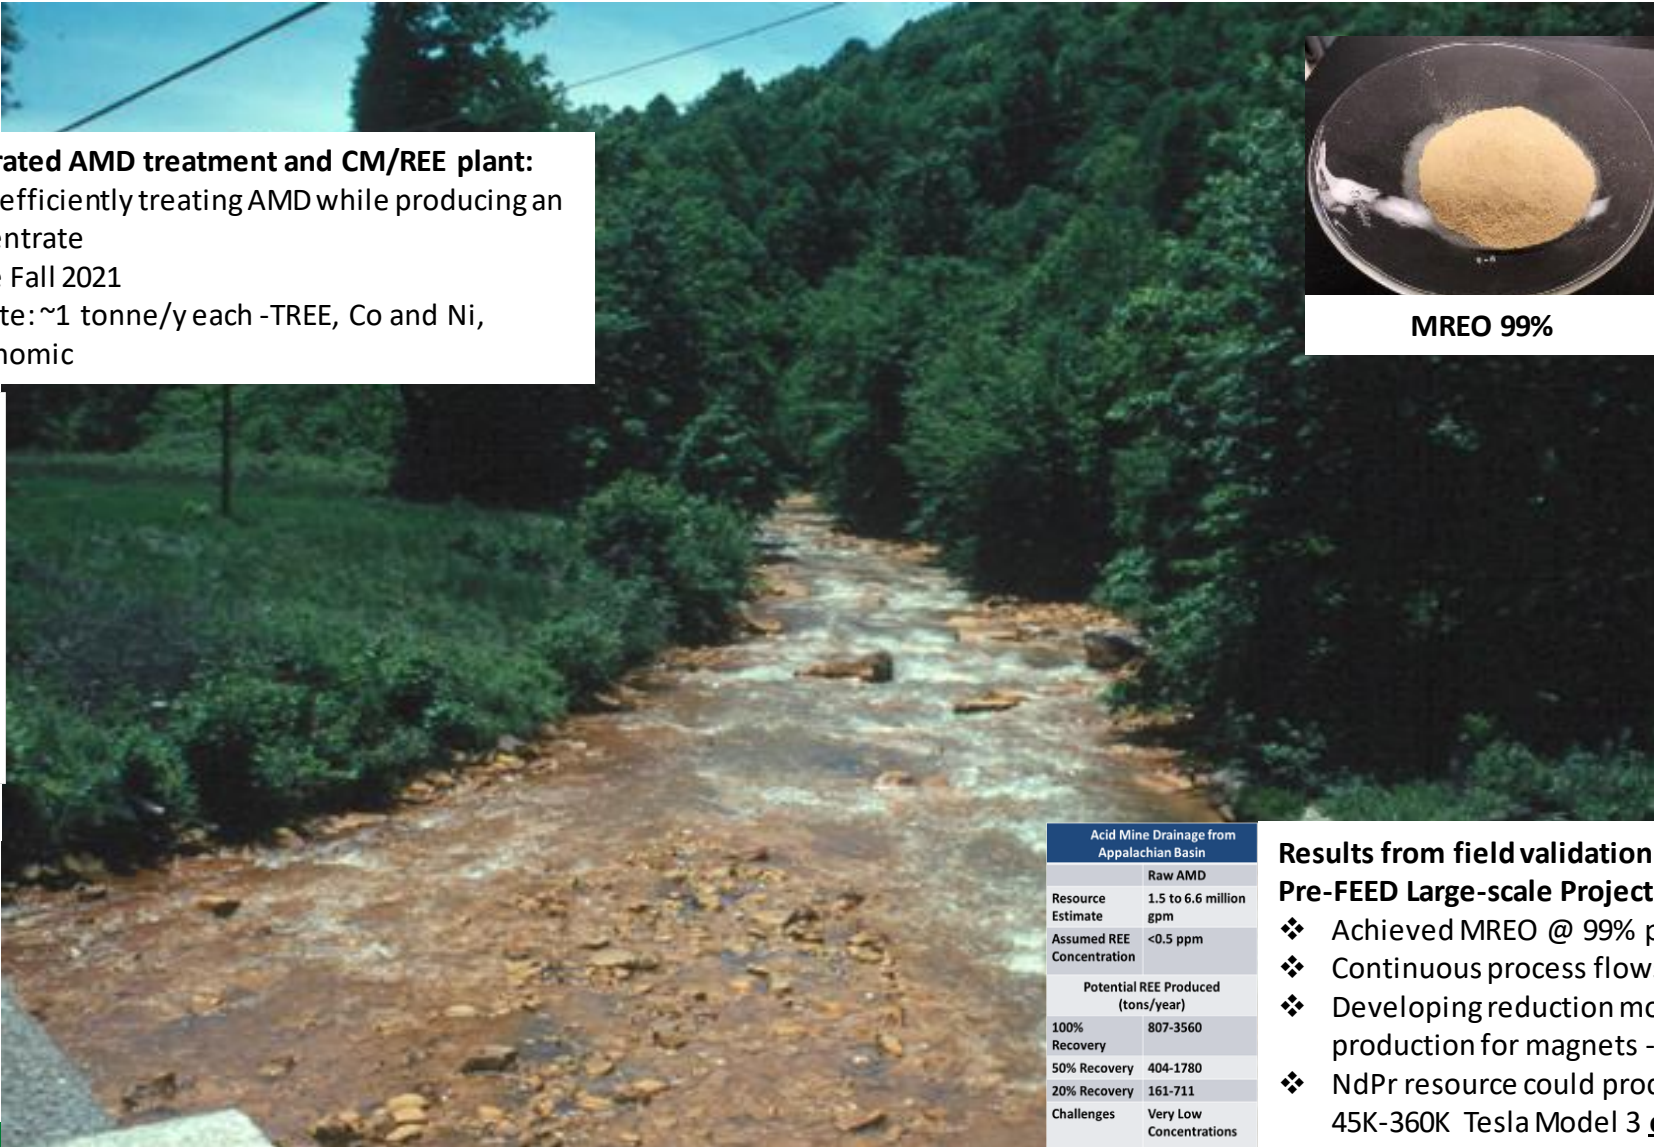

- ❖ Continuous process for efficiently treating AMD while producing an enriched CM/REE concentrate
- ❖ Planned operation: Late Fall 2021
- ❖ Potential production Rate: ~1 tonne/y each -TREE, Co and Ni, ~27 tonne/y Mn--if economic

45% HREE

MREO 99%

Acid Mine Drainage from Appalachian Basin	
	Raw AMD
Resource Estimate	1.5 to 6.6 million gpm
Assumed REE Concentration	<0.5 ppm
Potential REE Produced (tons/year)	
100% Recovery	807-3560
50% Recovery	404-1780
20% Recovery	161-711
Challenges	Very Low Concentrations

## Results from field validation pilot-project will inform Pre-FEED Large-scale Project:

- ❖ Achieved MREO @ 99% purity using solvent extraction
- ❖ Continuous process flowsheet—feedstock agnostic
- ❖ Developing reduction module for potential metal production for magnets -- NdPr and SmCo
- ❖ NdPr resource could produce (yearly) EV motors for 45K-360K Tesla Model 3 or 37K-299K Chevy Bolt

U.S. DEPARTMENT OF  
**ENERGY**

Fossil Energy and  
Carbon Management

Partners: Rockwell Automation, TenCate Corp., Virginia Polytechnic Institute and State University, Tom Laroche, and West Virginia Department of Environmental Protection

# Key Processing Targets and Opportunities

- Ensure sustainable processing technologies
  - Minimize emissions
  - Reduce chemical use
- Catalyze design, construction, and operation of **First Mover** facilities
  - 1-3 t/day MREO and MRES + CM
  - Other primary products
  - Converting commercial technologies for use
- Novel **transformational technology** development and validation
- “**Dating service**” for companies—bringing industries together throughout the supply chain
- System Optimization—high-power computing/design throughout the supply chain
- Develop **best practices**/lessons learned to accelerate technology dissemination
- Catalyze the deployment of **Next Generation** facilities for high purity refined materials/metals

# Pillar 3b: Carbon Ore Processing and Manufacturing Technology Development

## Processing and Manufacturing Technology Development

---

### Carbon Ore

- Housing and infrastructure development
- Advanced carbon material production(carbon fiber, graphene, and nanomaterial)
- Reinvest in critical (graphite and silicon) supply chains

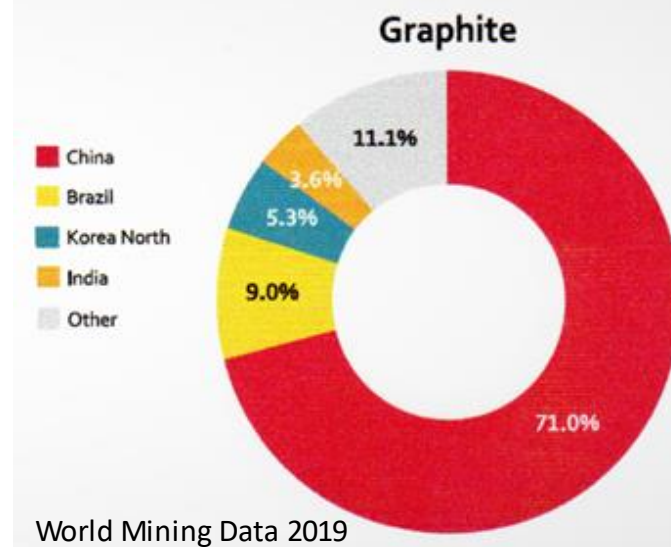

# Graphite is critical to future energy transition

The U.S. imported 58,000 tons of natural graphite in 2019 –  
Predominantly from China

World Mine Production & Reserves for U.S. & 4 Top Countries – Graphite (tons)			
	Mine Production		Reserves
	2018	2019	
U.S.	-----	-----	NA
China	693,000	700,000	73,000,000
Mozambique	104,000	100,000	25,000,000
Brazil	95,000	96,000	72,000,000
Madagascar	46,900	47,000	1,600,000
World Total (rounded)	1,120,000	1,100,000	300,000,000

<https://pubs.usgs.gov/periodicals/mcs2020/mcs2020-graphite.pdf>

China leads Natural Graphite production since the early 1990's

**3 billion tons of minerals and metals, including graphite, will be needed to deploy clean energy**

- Recycling and reuse is not be enough to meet the demand
- Production would need to ramp up more than 450% by 2050

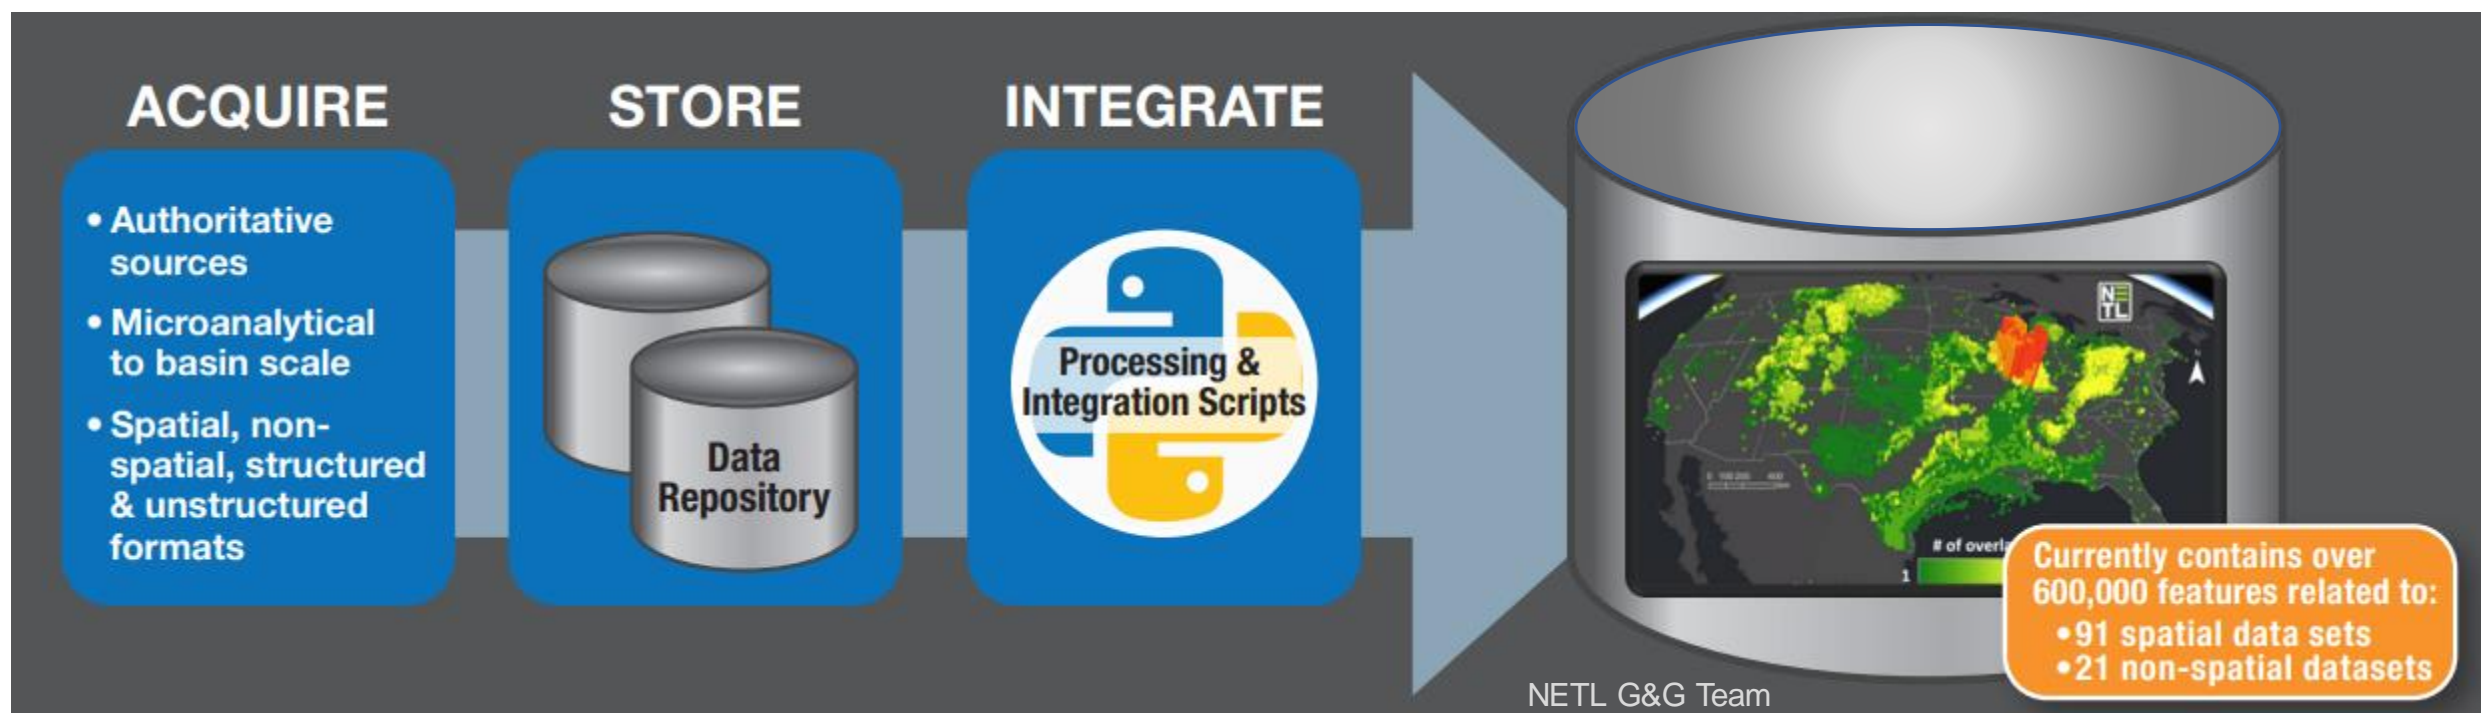

U.S. DEPARTMENT OF  
**ENERGY**

Fossil Energy and  
Carbon Management

# Carbon Ore Resource Database (CORD)

CORD is designed to optimize coal sources with consumer needs and identify key coal properties for end products

Optimizing coal sources with consumer needs and identifying key coal properties for end products.

# Carbon Ore Processing Opportunities

Opportunities toward a clean energy transition -- Advanced processing of carbon ore and associated by-products for the development of everyday and high value carbon products

## Next-Gen Construction & Infrastructure Materials

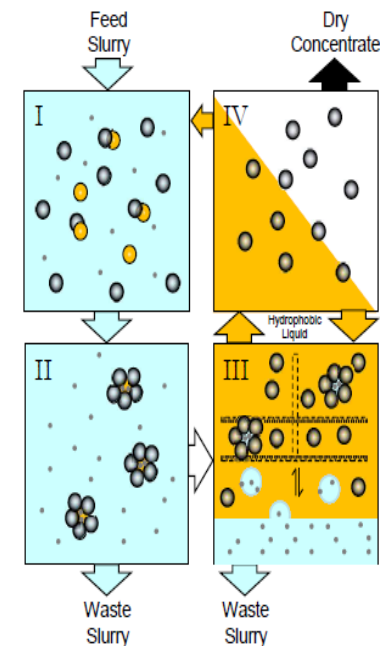

## Carbon Fibers from Coal Tar Pitch

## Nanomaterials

## Waste Recovery

- Generated predominantly from *coal waste and refuse* – toward remediation
- Enable domestic manufacturing of strategic materials to encourage job creation
- Ensure the health and safety of the environment and people around the use and disposal of carbon-based products

U.S. DEPARTMENT OF  
**ENERGY**

Fossil Energy and  
Carbon Management

# Crosscutting: International Engagements, Standards, and Supply Chain Development

---

## International Engagements, Standards and Supply Chain Development

---

### Ni, CO, Cr for Superalloys

- Identify co-production sources to meet increased demand in these metals
- Application of innovative processing, refining, and alloying technologies to increase purity from the waste materials

### Carbon Ore to Products

- Assessment and characterization of coal and waste materials
- Environmentally responsible extraction and beneficiation
- Co-production of high purity carbon and critical material products

# International Engagement and Standards Development

**Responsible stewardship of critical materials is a domestic and international issue requiring high environmental standards across the entire supply chain**

DOE engages in ISO efforts to improve sustainability in global critical material supply chains

- ISO TC 298 Rare Earth Elements
  - U.S. proposed developing a sustainability standards for rare earth mining, separation and processing to include environmental, economical and societal impacts
  - Working Group 5 has been established specifically for sustainability, and will be beginning work soon
- ISO TC 333 Lithium
  - New technical committee that is still developing strategic business plan, but is meant to include the full supply chain, excluding LIB as end products
  - Sustainability proposal put forth by the U.S. and is currently posted for a 12-week ballot

OSTP NSTC CMS, International Bilaterals/Trilateral interactions are opportunities to coordinate responsible development of supply chains
