

# Cyber Threat Targeting Critical Energy Infrastructure is Evolving: A Move From Cyber Security to Cyber Resilience is Needed

“... Countries have the capability to successfully launch a cyber-attack that could shut down the electric grid in parts of the United States” Admiral Rodgers - NSA Director testimony to Congress, Nov. 2014

It's only a matter of the when, not the if, you are going to see a nation state, a group or an actor engage in destructive behavior against critical infrastructure of the United States,”  
Admiral Rogers, Director, NSA, US Cyber Command, CNET, March 5, 2016

# Digital Ghost: An Industrial Immune System for Critical Energy Infrastructure

**Self Healing Game Changer** - Successfully demonstrated Digital Ghost's ability to - Detect, Localize and Neutralize advanced cyber attacks in various critical energy infrastructures and systems

**A Move from Security to Cyber Resilience** - Digital Ghost combines over 38+ innovative patents that combines artificial intelligence, cyber-physical resilience and other advanced threat mitigation solutions

**Cyber Resilience & Optimization;** While most cybersecurity solutions increase costs and reduce functionality, Digital Ghost has the potential to improve asset performance and reduce costly faults from all **cyber-physical hazards**.

## Detect

**Human Immune system** Detects pathogens

**Industrial Immune system** Detects anomalous behavior

## Locate

**Human Immune system** Where an attack is occurring

**Industrial Immune system** Which sensor is being attacked

## Neutralize

**Human Immune system** Ability to kill pathogens

**Industrial Immune system** Can replace a compromised sensor

Digital Ghost uses detailed computer simulation models called Digital Twins to train sophisticated algorithms that provide Detection, Localization and Neutralization.

Science + Expertise  
with strong 38+ Patent Filings

99% Detection Accuracy

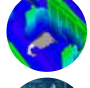

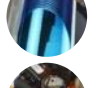

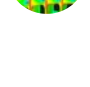

- **Physics-based transient model** used in training DG, key for accurate predictions
- **Deep machine learning** to establish boundaries between normal and abnormal operating zones
- **Controls and Safety know-how** to maximize the accuracy of DG, ensure robust & safe operation, and enable neutralization

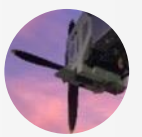

# GE Research... interdisciplinary R&D to scale

## TECHNOLOGY DOMAINS

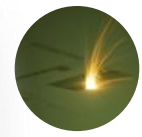

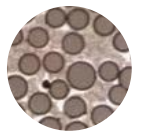

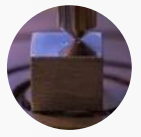

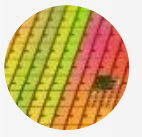

-  Artificial Intelligence
-  Biology & Applied Physics
-  Controls & Optimization
-  Edge Computing
-  Electronics & Sensing
-  Electric Power
-  Materials
-  Mechanics & Design
-  Robotics & Autonomous Systems
-  Software & Analytics
-  Thermosciences

## PRODUCT

-  2 Cent Wind
-  Next Gen Narrowbody
-  Additive Machines
-  Gas Turbine Leadership
-  70GWh Offshore WTG
-  Plug & Play MR
-  Renewable Reservoir
-  Hybrid – Electric Flight

## HORIZONTAL

-  Additive
-  Artificial Intelligence
-  CMC
-  Controls/ Secure Edge
-  Service Technology
-  Digital Twin & Cyber
-  Specialty Materials
-  SiC

## EXPONENTIAL

-  Autonomous Imaging
-  Bioelectronic Medicine
-  Industrialized Blockchain
-  3rd Wave AI
-  Quantum Sensing & Computing
-  Trusted Autonomy

A unique competitive advantage for GE
