U.S. House bill seeks \$8 billion for abandoned oil and gas well cleanup

By Nichola Groom

3 MIN READ

(Reuters) - A U.S House of Representatives Democrat introduced a bill on Thursday authorizing \$8 billion to plug and clean up abandoned oil wells nationwide, a measure aimed at creating jobs for oil and gas workers and reducing climate-warming emissions.

2021-2031

Orphaned Well Cleanup and Jobs Act

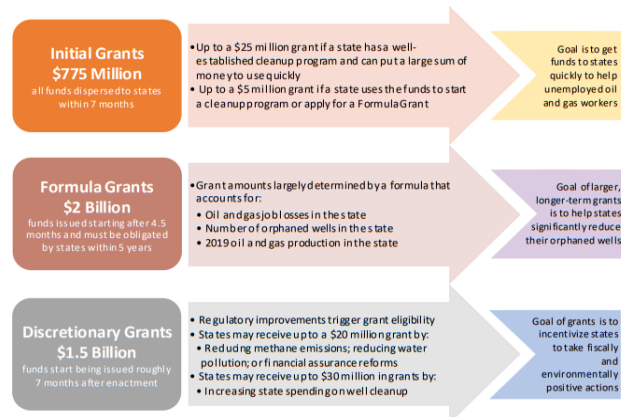

Across the country, over 56,000 known "orphaned" oil and gas wells (abandoned wells with no responsible party for cleanup) can leak methane, contaminate groundwater, and create safety risks. Even before the economic consequences of the COVID-19 pandemic, federal agencies and states responsible for plugging and reclaiming these wells had limited funding for cleanup. Under the *Orphaned Well Cleanup and Jobs Act*, **over \$4.6 billion** would go towards putting people to work cleaning up these sites. This reclamation and restoration work will help stimulate rural economies, create jobs, and cut down on pollution.

FUNDING AMOUNTS

- **\$4.275 billion** for orphaned well cleanup on state and private lands
- **\$400 million** for orphaned well cleanup on public and tribal lands
- **\$17 million** for related research, development, and implementation

STATE GRANTS

Most documented orphaned wells are on state and private land, and the bulk of funds in the bill are dispersed to states through three types of grants administered by the Department of the Interior (DOI):

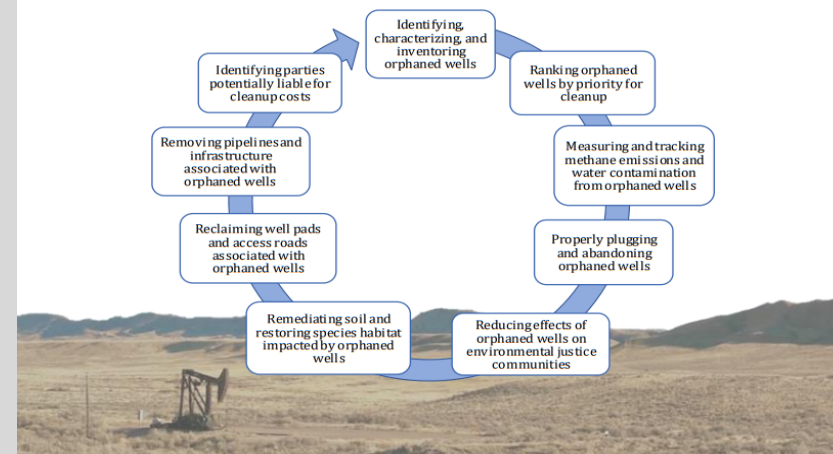

PUBLIC LANDS AND TRIBAL GRANTS

In addition to state grants, the bill directs funds to DOI to cleanup orphaned wells on public lands and creates a grant program within the Bureau of Indian Affairs to help Tribes cleanup orphaned wells:

CLEANUP ACTIVITIES

The bill allows states, tribes, and federal agencies to use a variety of steps to find, assess, and clean-up orphaned wells and reduce the impacts of those wells to nearby communities and the environment:
