## Utility Exchange Program

*(Pakistan Distribution Companies)*

### ***SAFETY***

*By: Walt Booker, Manager*

*Safety & Technical Training*

- \* **Safety Mission Statement**
- \* **Safety Philosophy - Principals**
- \* **Best Practices**
- \* **Incident Investigation**
- \* **Safety Audit**
- \* **Questions**

*The United Illuminating Company*

# Safety Mission Statement

The United Illuminating Company is firmly committed to protecting the public and our employees from injury through safety training and awareness programs.

This commitment is accomplished by constructing and operating our equipment and work facilities in accordance with a comprehensive safety program that is consistent with regulations, current technology and sound safety business practice.

UIL HOLDINGS CORPORATION

*The United Illuminating Company*

# UI Safety Philosophy – Safety Principles

The following six safety principles govern UI's approach toward safety and are used in all decisions regarding safety. To achieve continuous safety improvement, all employees, from management to hourly workers, will need to know, understand and accept these principles as the standard reference for a safe work environment.

# All injuries can be prevented

- \* Belief is cornerstone of our safety approach
- \* Governs our attitude to unsafe acts and conditions
- \* Establishes responsibility for reporting unsafe conditions
- \* Causes us to investigate incidents that could have caused injury

# Management is responsible for preventing injuries

- \* Provide tools, equipment and PPE
- \* Provide safety training
- \* Hold employees accountable for working safely

# All operating exposures can be safeguarded

- \* UI Safety Manual
- \* OSHA Regulations
- \* Operating procedures
- \* NESC
- \* Work practices

*The United Illuminating Company*

# Training employees to work safely is essential

- \* OJT
- \* Enhanced skills training
- \* Continuous refresher training

# Prevention of personal injuries is good business

- \* Time away from work
- \* Costs of injuries to the business
- \* Morale

# Working safely is a condition of employment

- \* Applies to all employees
- \* Important aspect for assessing employee's work
- \* Impacts chances for promotions and raises
- \* Persistent disregard can lead to dismissal

# Best Practices

# Incident Investigation

- \* Identifies the root cause of the accident or near miss
- \* Results are communicated through out the company
- \* Prevent Recurrence
- \* Improve Your Management Safety
- \* Demonstrate Your Commitment to Safety

# Safety Audit

- \* Identifies unsafe acts and conditions before an injury takes place.
- \* Maintains standards by ensuring that everyone follows the rules and procedures you already have and showing you where your rules and procedures are insufficient.
- \* Measures the effect of safety education by showing how far it has improved work behavior.
- \* Reveals weaknesses in the safety program.

## **Safety Audit (cont'd.)**

- \* Motivates supervisors and hourly employees by giving the results of their safety efforts in a clear, measurable form. Supervisors can see where they are going and plot their progress.
- \* Increases safety awareness.

**Energy Use Analysis**  
Learn more about how I use energy.

Save Time, [Pay Online](#) - With UI's free online payment service, you pay your bills from the convenience of your home or office. It's reliable, secure and so easy.

### Bill Highlights

- Your electric usage decreased for this bill.
- Your energy charges were \$ 9.23 lower for this bill.

### Bill Analysis

Still have questions about this bill? Find out more about why your bill has changed.

### How does my usage compare?

Usage Comparison

Electric Use (MWh)

Month	Electric Use (MWh)
April, 2008	1,044
April, 2009	803

### Bill History

View and graph up to 24 months of information from your bills.

### Meter Highlights

- Your projected bill as of 5/3/2009, is \$177
- Based on actual billing data, as of: 5/3/2009 --This represents 26 days of usage in your current bill cycle.
- Your energy usage to date is: 776 kWh
- Average Daily Expense: \$6.84/day
- Your Projected Bill for this bill period is: \$175 - \$263 -- This is an estimate of your next bill based on your rate and energy usage. However, the actual bill amount may or may not fall in the projected bill range listed here. Factors such as weather, length of the billing cycle, energy usage, alternate supplier pricing and cost saving measures can impact the actual bill you'll receive for the billing period.
- Next Bill: You will receive your bill around 5/10/2009.

## Rate Comparison-TOD

**Rate Comparison Calculator**  
You can compare the benefits of a new rate plan and compare it with a new energy-saving strategy. We'll use your current bill and meter data to analyze your savings under various rate plans that you can choose.

My current rate plan:  
You are currently on the following plan: Standard Residential Rate  
This is the default rate plan for all residential customers.

**Compare Plans:**

- Choose a new rate plan to compare: Time-Of-Use Residential
  - Lower prices during off-peak hours
  - Weekday off-peak hours: mornings until noon & evenings after 6:00 pm
  - Weekends are always off-peak.
- Shift Energy from On-Peak to Off Peak
  - No Change.
  - We are not in our wars, doing the best we can.

**Annual Cost Comparison**

Your estimated annual savings: **\$140**

View monthly results - including costs, savings, & energy use. [View Details](#)

## Bill Analysis

Summary | Details

Electric Meters: 014013142

	Selected bill: 8/07/2007	Last month: 7/05/2007	Impact
Billings Days:	32 days	30 days	+\$34
Basic Service Charge:	\$12.12	\$12.12	No Change
Average Cost per kWh:	\$0.2082 / kWh	\$0.2084 / kWh	-\$1
Average Use per Day:	81.75 kWh / day	71.12 kWh / day	+\$86
Analyze Usage Change			
<b>Total Electric Charges:</b>	<b>\$556.83</b>	<b>\$456.91</b>	<b>+\$99.92</b>

This is a detailed comparison of your electric use and charges. The Bill Impacts show how much each of the factors - Bill Period, Fixed Charges, Average Cost, and Average Use changed your bill. Click any item with a "T" to learn more. Choose Analyze to find out what caused your usage to change.

**8/07/2007 Bill Highlights**

- Energy Charges:** Your energy charges were \$99.92 higher for this bill.
- Electric Usage:** Your electric usage increased for this bill.
- Weather:** The weather may have increased your bill by \$50 - \$83.
- Billing Period:** The billing period for this bill is longer as compared to the previous bill.
- Electric Rate:** Your electric rate decreased this month.
- Other Charges:** Other "non-energy" charges totaling \$2.00 are included in this bill.

**Bill Analysis**  
Still have questions about this bill? Find out more about why your bill has changed.

## Remittance

- EZ Pay Project:
  - Implement bill print, ACH and credit card solution to improve UI's remittance process
  - Mitigate uncollectible risk
  - Provide Smart Technologies to improve customer satisfaction and Reduce Operating Cost
- Business Need:
  - Improve Revenue Cycle Service process
  - Improve Cash Flow
  - Mitigate Uncollectible Risk
  - Improve Customer Satisfaction

## Benefits

- Process Improvement
  - Disconnect / Reconnect process
- Multiple payment options
  - Non-enrolled one-time payments
    - Channels - web, IVR, & live agent
    - Payment Types – ACH, Credit, & Debit
  - Enrolled Web Payment
    - Payment Types – ACH only
    - Integration with My Account (Aclara)
  - Soft Post – Near Real-Time SAP Integration
- Implement Bill Print Solution
  - Bill Management
  - Bill Print, Insertion, and Mailing

The United Illuminating Company

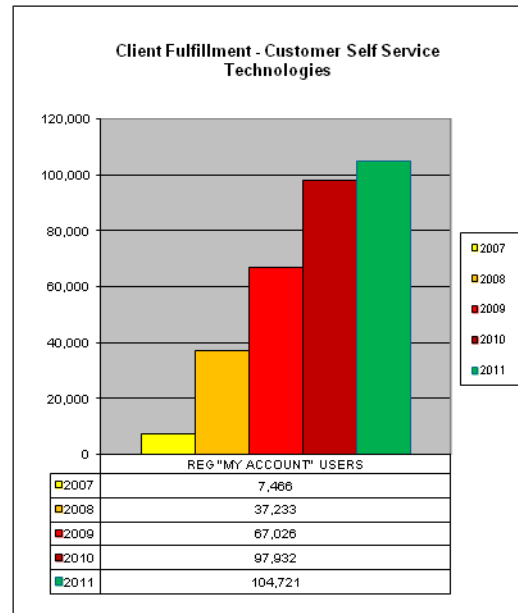

# EZ Pay Project

## Results

- Utilization of online payment channels
- Increase in registered "My Account" users
- Increase utilization of web/IVR

- Identified projects with clear need
- Full 10-yr forecast for Gas Distribution CapEx
- IT-related shared services projects are in UIL Corporate

**Total UI = 1,663 M Pak Rupees – Total UIL = 2,738M Pak Rupees**

## 2012-2021 CapEx by Category

### Electric Distribution

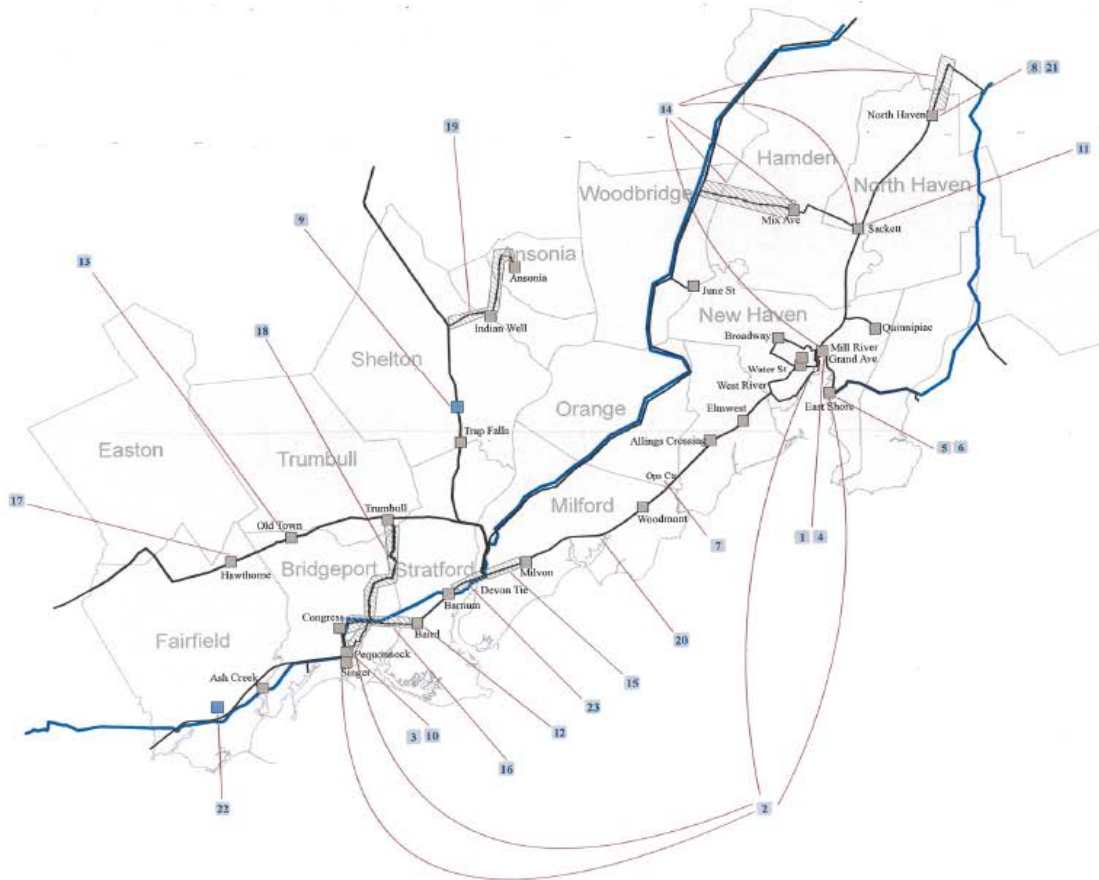

### Electric Transmission

### Gas Distribution

Year	Project Description	Status
2012	1 Grand Avenue 115 kV Switching Station Modernization	In-Service
	2 ISO-NE Synchrophasor, Phasor Measurement Unit Installation	Construction
	3 Pequotnock 115 kV Bus System Upgrades, Bay 1 - Control Room Relay Replacement - 115 kV Bus System 03 kA upgrade - Disconnect switch replacements	Planned
2013	4 8300 Line Reconfiguration Project	Planned
	5 East Shore 115/13.8 kV Substation, Distribution Capacity Upgrade	Planned
	6 East Shore Substation, 115 kV Circuit Breaker and Switch Replacement	Planned
	7 SCADA Master Station Replacement	Planned
8 North Haven Substation, Capacitor Bank TRV Mitigation	Construction	
2014	9 New Pootatuck (Shelton) 115/13.8 kV Substation	Planned
	10 Pequotnock 115 kV Fault Duty Mitigation, Phase 1	Proposed
2015	11 Sackett 115/13.8 kV Substation, Distribution Improvements	Planned
2016	12 Baird 115/13.8 kV Substation Upgrade or Replacement	Concept
	13 Old Town 115/13.8 kV Substation Upgrade or Replacement	Concept
	14 SWCT, New Haven Area 115 kV Transmission Upgrades - Glen Lake - Mix Ave 115 kV 1610 Lane Reconductoring - Sackett: Phase Shifter Removal, 115 kV Capacitor Bank Replacement, Terminal Upgrades - Mix Ave: 115 kV Capacitor Bank Addition, Terminal Upgrades - North Haven - Wallingford 115 kV 1630 Lane Reconductoring - Grand Ave: 115 kV Capacitor Bank Addition	Concept
	15 SWCT, Devon Tie - Milvon 115 kV RR Line Reconductoring/Upgrade	Concept
	16 SWCT, Congress - Baird 115 kV RR Line Reconductoring/Upgrade	Concept
	17 SWCT, Hawthorne 115 kV Capacitor Bank (2) addition	Concept
2017	18 SWCT, Trumbull - Pequotnock 115 kV Transmission Upgrades	Concept
	19 SWCT, Naugatuck Valley 115 kV Transmission Upgrades	Concept
	20 FAC-008 Long Term Remediation Project (2016-2022)	Concept
	21 North Haven 115/13.8 kV Transformer Replacements (LTC's)	Concept
2019	22 New Fairfield 115/13.8 kV Substation	Concept
2022	23 SWCT, Barnum - Devon Tie 115 kV RR Line Reconductoring/Upgrade	Concept

## Central Facility – UI Office & Operations Building

- Consolidate all UI “Work Centers” onto a single site referred to as the Central Facility
- Under construction
- Planned in-service 2012

## Splice Chamber Remediation

- Rebuild deteriorated underground splicing chambers
- In progress
- Annual program over 10 years

~ \$8M per year

## Network Infrastructure Replacement

- Addresses aging network infrastructure to reduce hazards associated with equipment failure
- In progress
- Annual program over 10 years

~ \$5M per year

## Distribution Transformer Replacement Program

- Infrastructure program to replace transformers due to poor physical condition, inadequate capacity, that could potentially contain levels of PCBs
- In progress
- Annual program over 10 years

~ \$7M per year

# 2012-2016 Average Rate Base Forecast

### Rate Base \$M (Excluding GenConn Equity Investments):

**2012-2016  
CAGR 7.3%**

*Gas  
Distribution:  
4.1%*

*Electric  
Transmission:  
9.2%*

*Electric  
Distribution:  
11.6%*

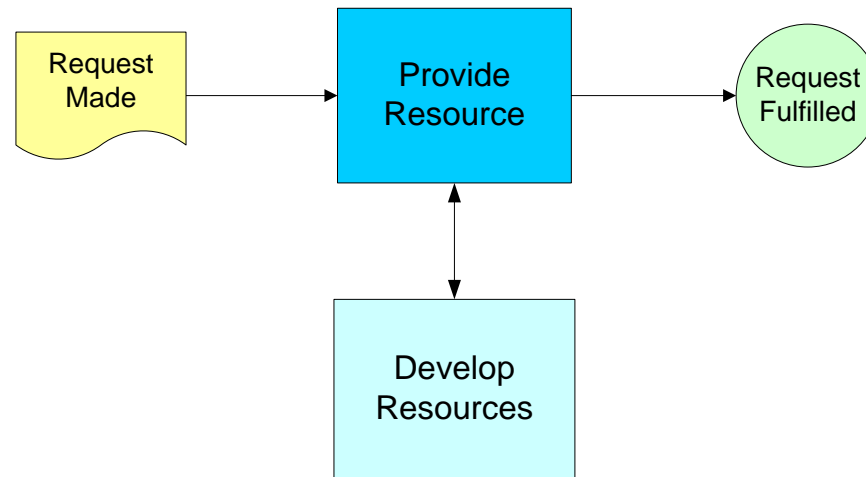

- EPE & ESO Aging Workforce Profile
- Current Programs
  - Internship
  - New Engineer Development
- Recommendations to Close the Gap

Our processes help provide and develop necessary resources to support the 10 Year Plan and sustain the operational needs of the company.

- The charts portray the number of persons who have reached the age of 62 as of that year. These positions require a degree and are not union.
- The line and scale on the right show the cumulative number of persons who have reached the age of 62 over the five year period.

# New Engineer Development Program Resource Projection & Gap

**G  
A  
P\***

\* Does not include any non-retirement attrition

# Providing A Trained, Competent Workforce

We have established Programs to attract and develop new talent:

## I. External Recruitment

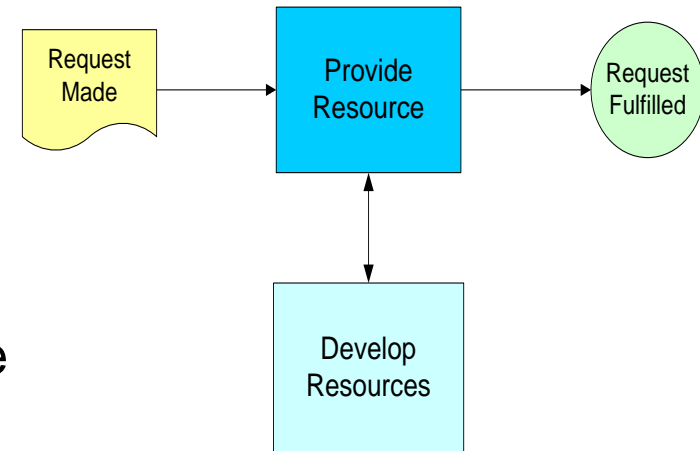

- The Marketplace & Graduating Seniors

## II. UI's Internship Program

- 11 out of 17 Engineering positions were

## III. Engineering Development Program

- 14 have 'graduated' into the mainstream

The United Illuminating Company

UConn

# New Engineer Development Program: Resources for 10 Year Plan

*We need to accelerate and expand our:*

## 1. Recruitment

- Project managers and “second career” engineers
- Engineers in targeted universities and colleges

## 2. Internship / Scholarship Program

- Recruit Local and Regional talent
- Include UNH

## 3. New Engineer Development Program

- Increase from 4 to 6 per year
- Build upon our success

We have:

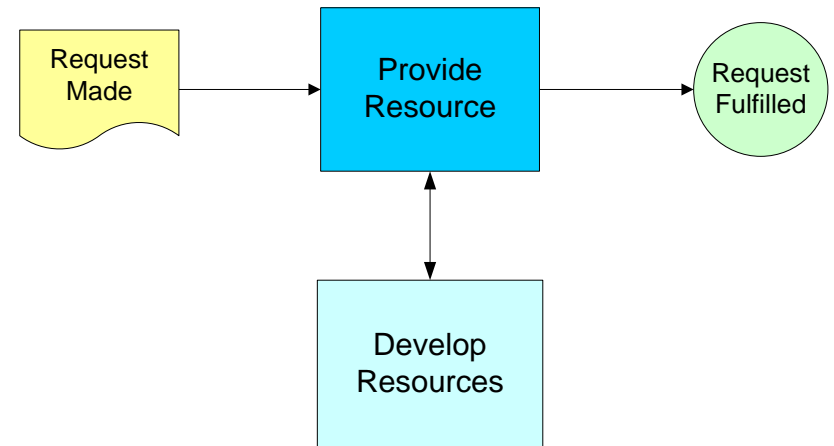

1. Proven processes that provide and develop resources to support the 10 Year Plan.

2. Engaged Employees

- Challenging Work
- Focused Development
- Advancement Opportunities

3. Commitment at all levels

- Engaged Management & Supervisors
- Implemented 2010 Adjustment Study
- Aligned to UIL Scorecard, the 10 Year Plan and our core business.

## Utility Exchange Program

*(Pakistan Distribution Companies)*

## ***LONG TERM PLANNING AND POWER REQUIREMENTS***

*By: Bob Manning, Manager*

*System Integrity*

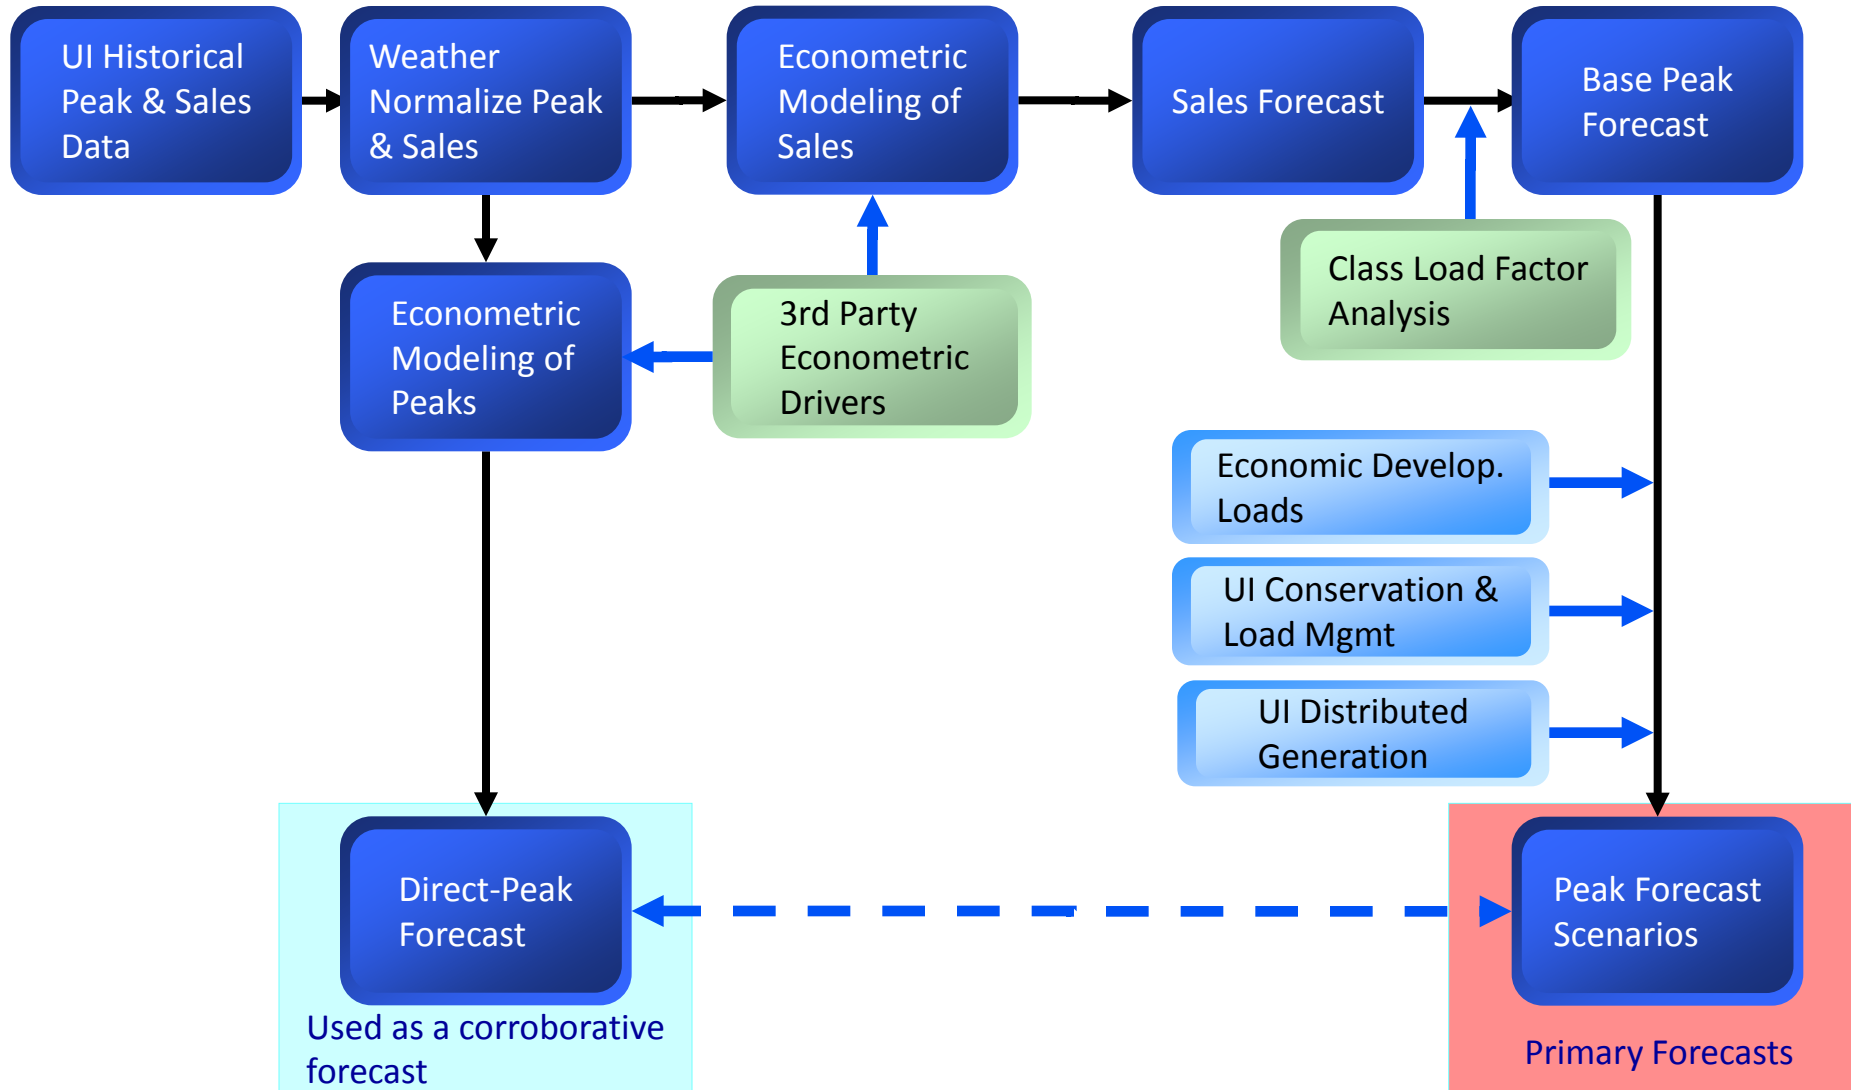

- ❖ Analyze Capacity of Existing Substations
- ❖ Input into the Ten Year Plan
  - Financial Forecasting
  - Manpower Forecasting
- ❖ Meet Required In-Service Dates of Multi-Year Projects
  - New Substations
  - Substation Expansions
- ❖ Meet Regulatory Requirements
  - ISO-NE
  - CSC

## Load Forecast Methodology

The United Illuminating Company

# Why Weather Normalize?

## UI Historical System Peak

# Weather Normalization and THI

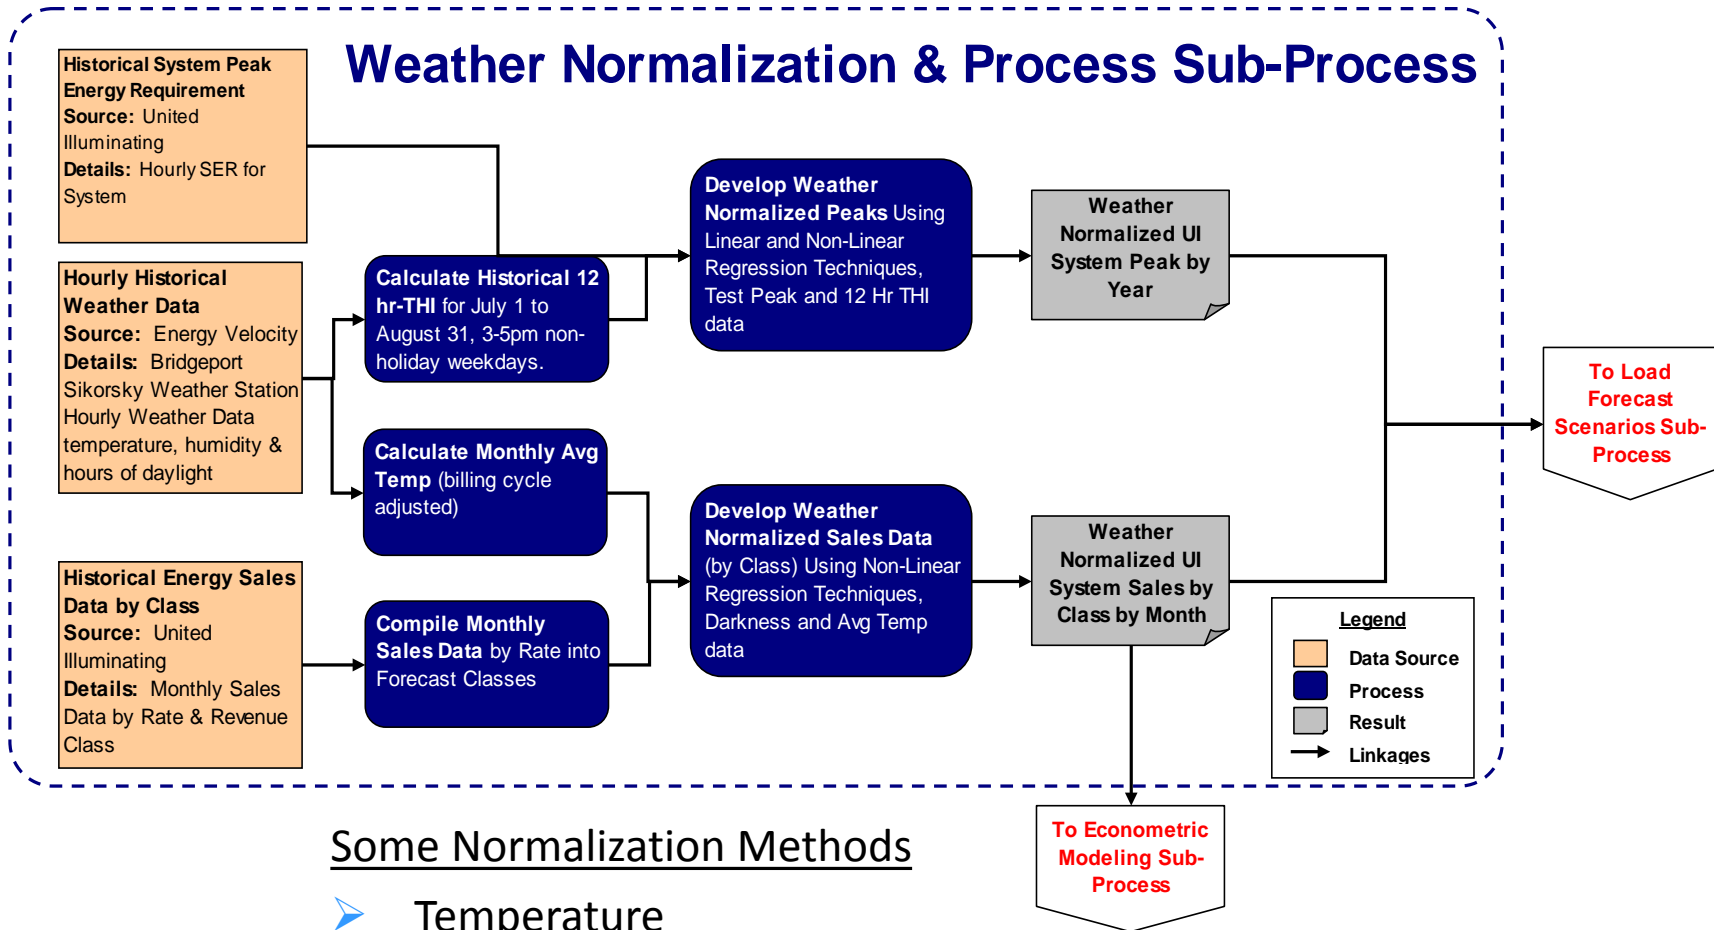

Actual & Normal Peak vs. the 12-HR Average THI

	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011
90/10 Normalized Peak	1,292	1,322	1,318	1,351	1,364	1,428	1,456	1,464	1,467	1,395	1,366	1,386
Actual Measured Peak	1,157	1,324	1,310	1,281	1,201	1,346	1,456	1,298	1,301	1,253	1,369	1,398
12-Hr Avg THI	76.4	80.5	80.1	78.5	76.0	78.5	80.5	78.3	78.1	79.3	82.0	83.6

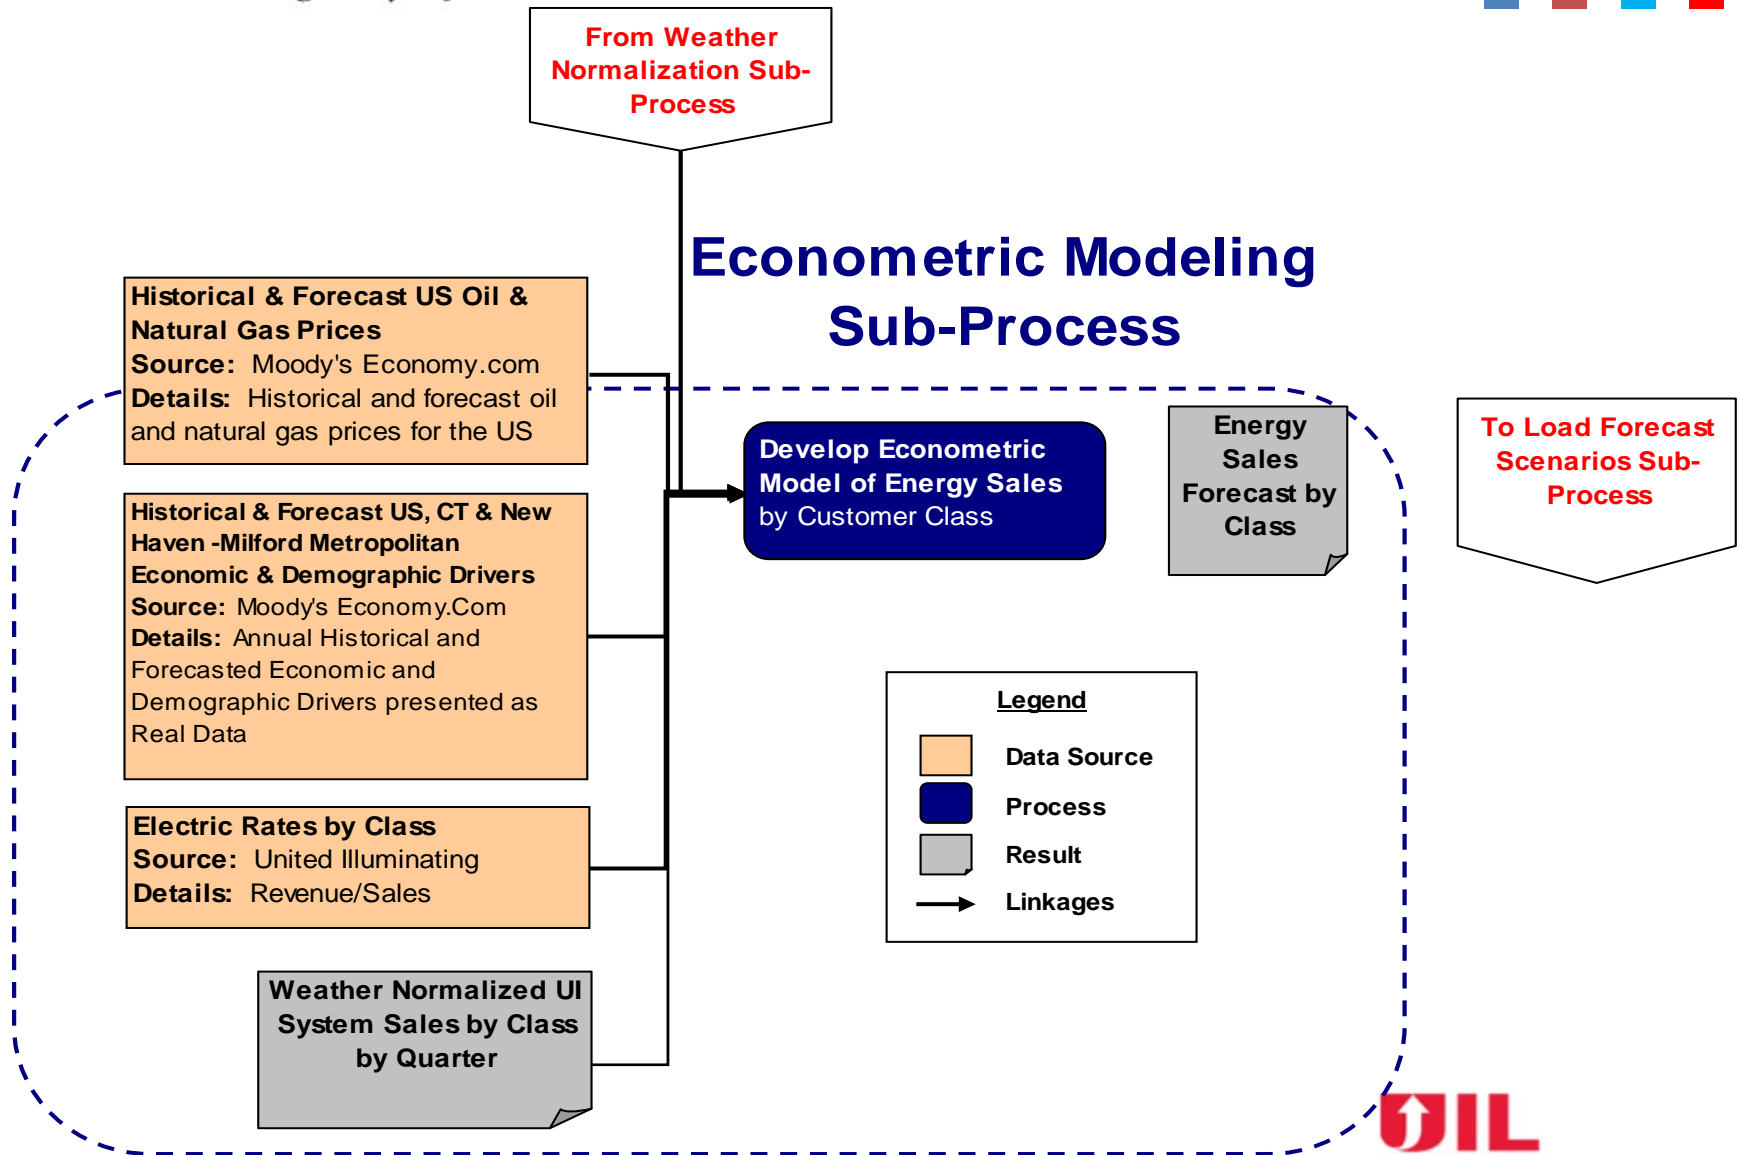

# Energy Sales & Peak Weather Normalization

## Energy Sales Forecast Classes

- Residential
- Small Commercial
- Mid Commercial
- Large Commercial
- Mid Industrial
- Large Industrial
- Commercial Area Lighting
- Industrial Area Lighting
- Street Lighting

## 2012 Forecasting Models

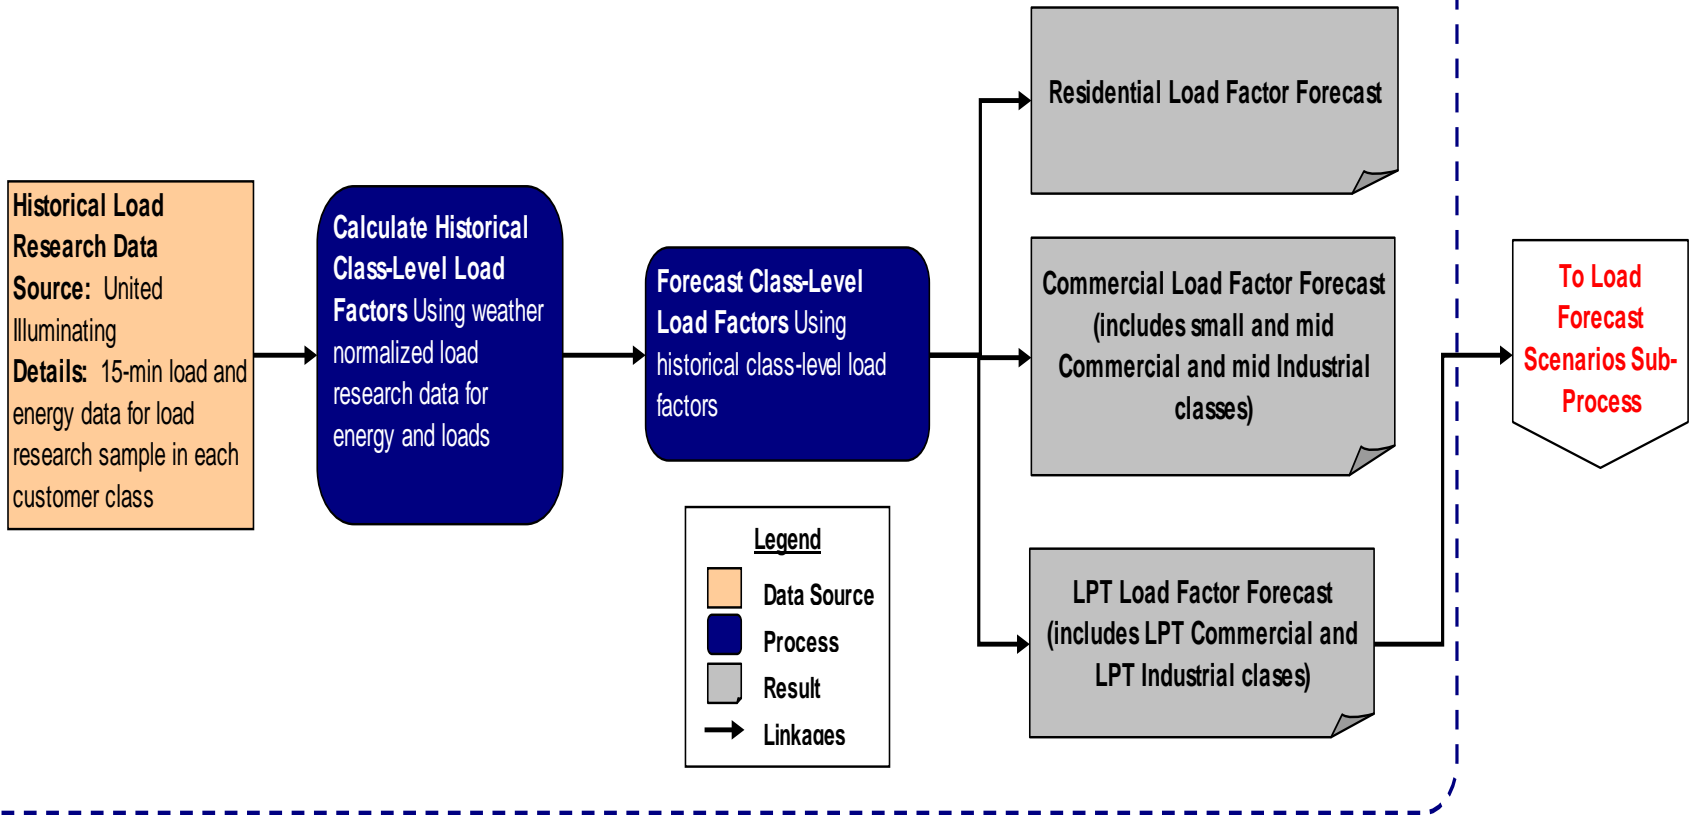

### Forecast Variables

- NH Civilian Labor Force
- CT Retail Sales
- CT Single Family Housing Starts
- U.S. GDP
- CT Bankruptcies: Bus-Ch-13
- CT Employ: Retail Trade
- NH Population
- U.S. Natural Gas Price

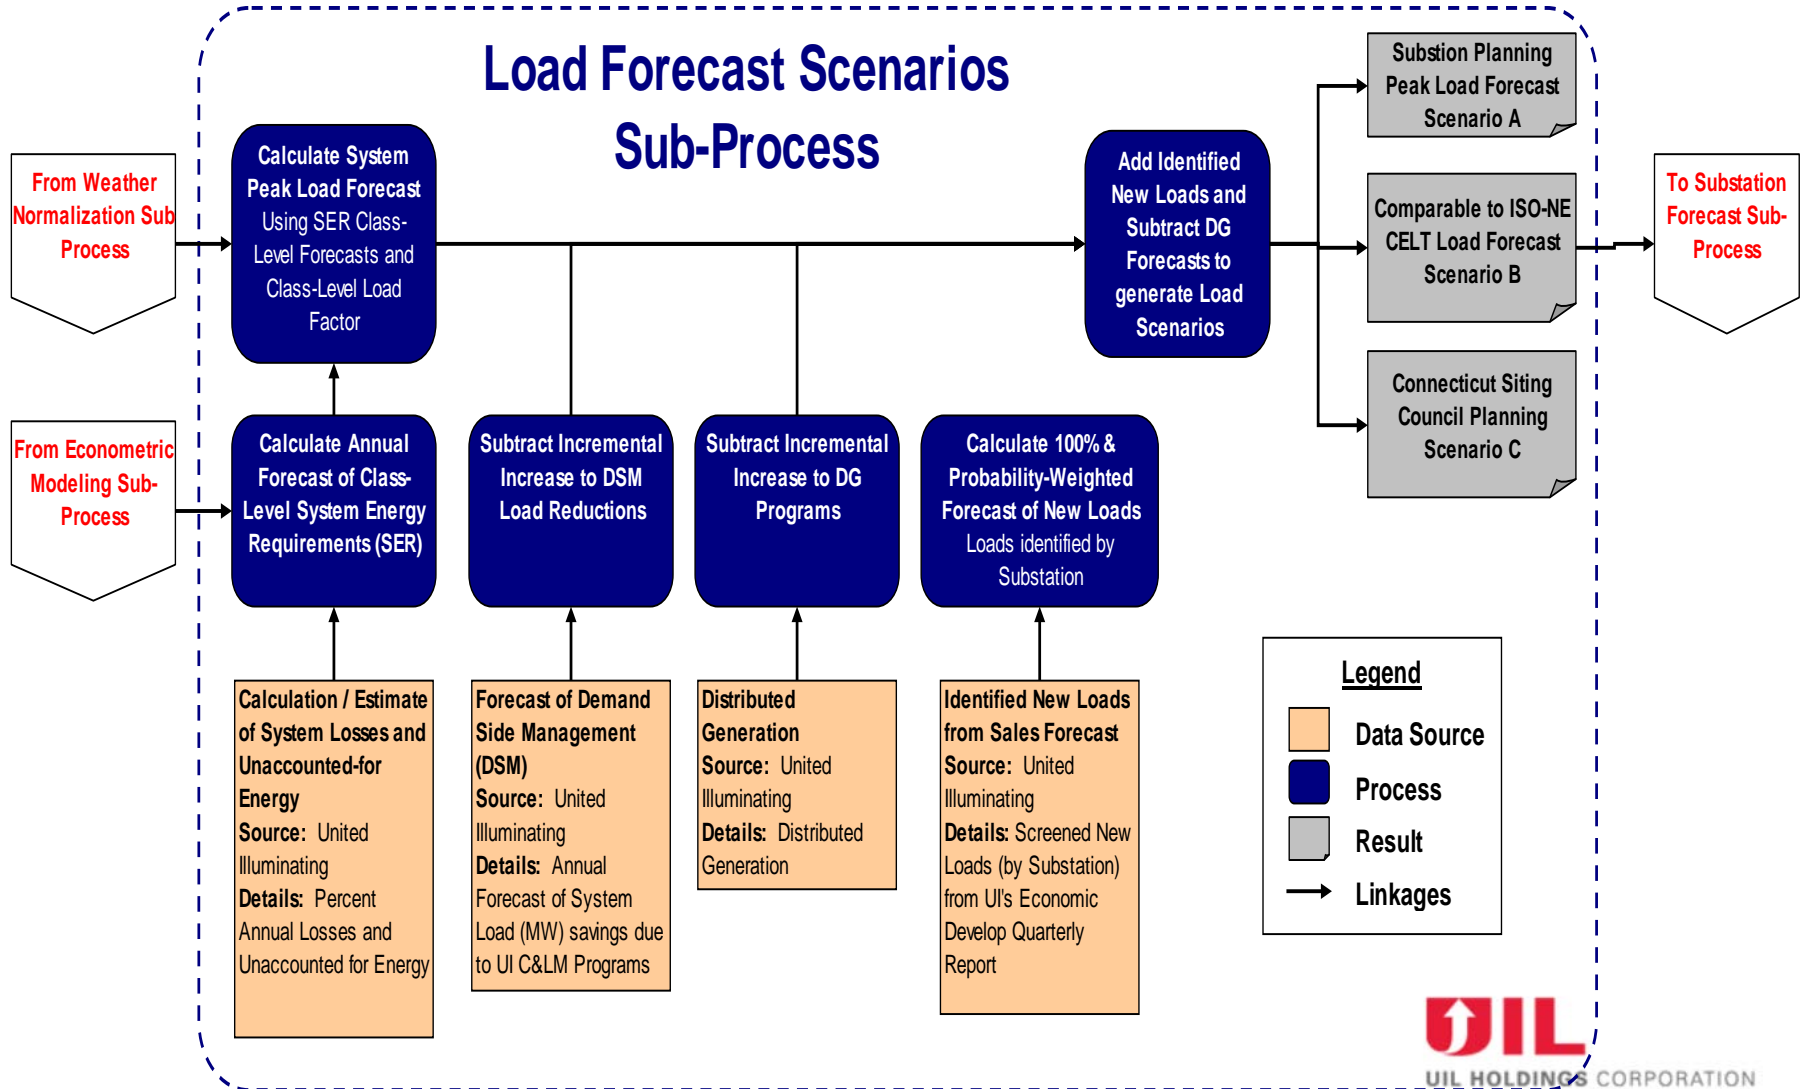

Variables Obtained from 3<sup>rd</sup> Party Sources  
Tested for Lags – Up to 4 Quarters

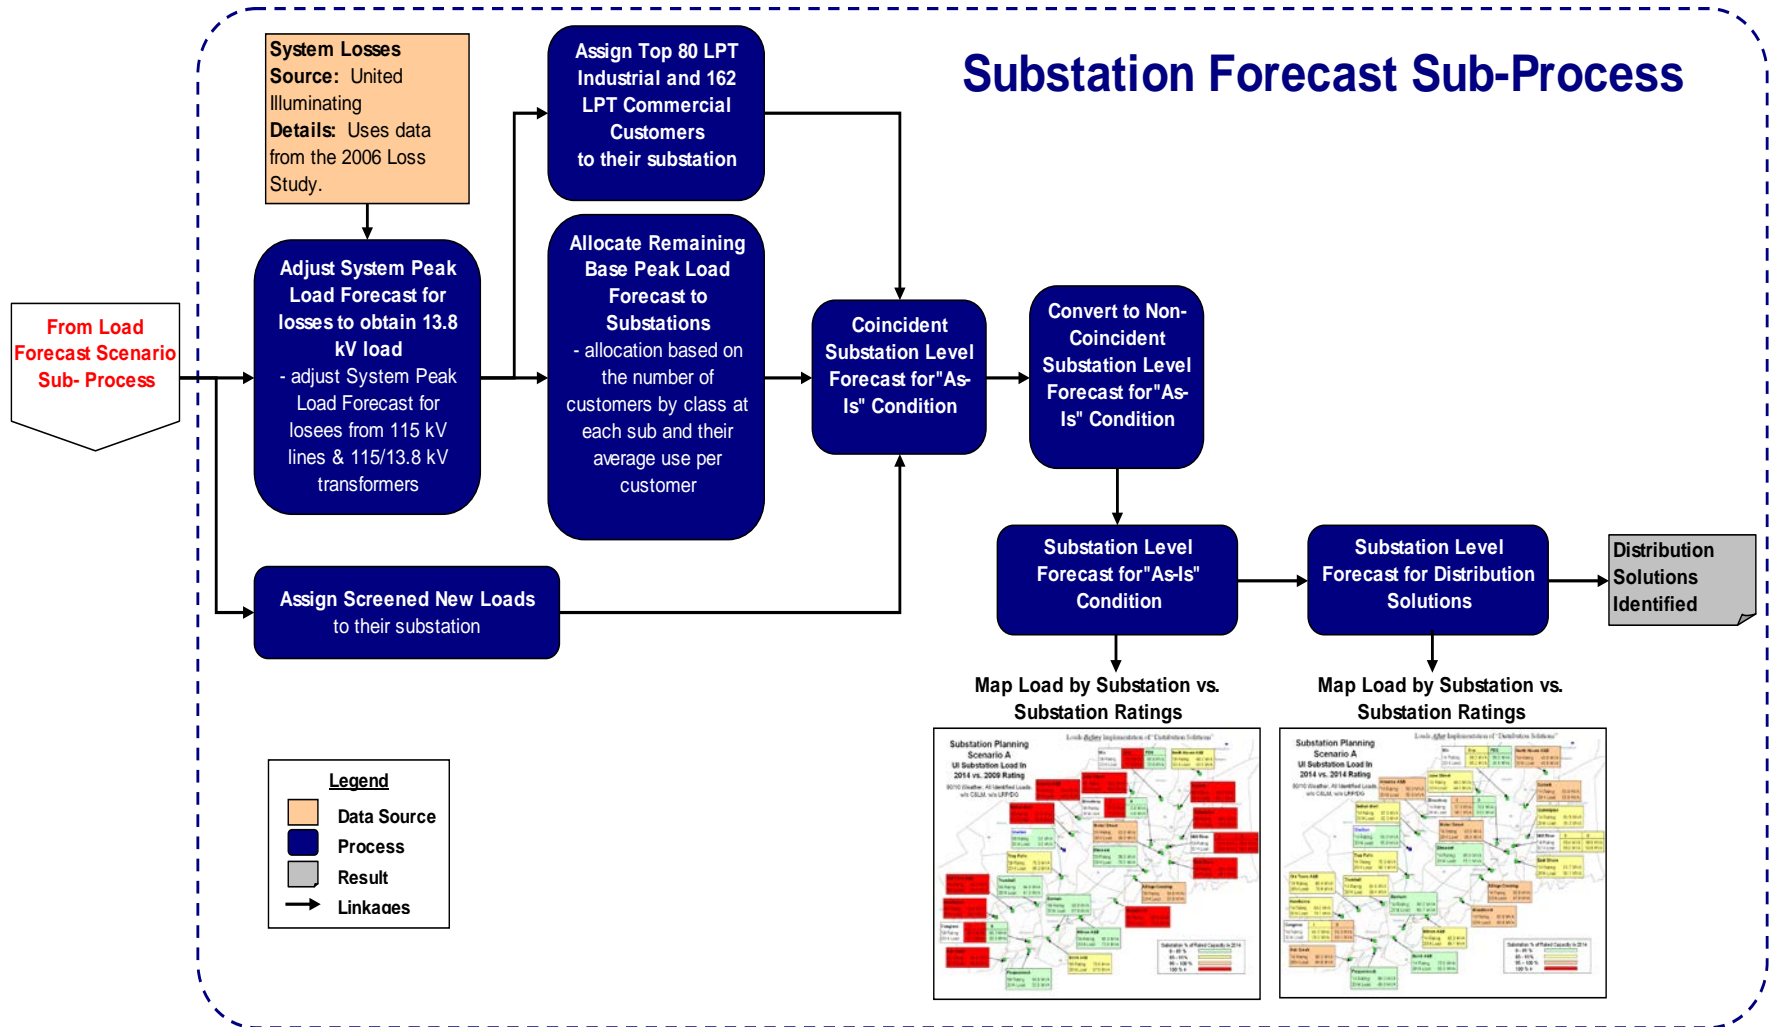

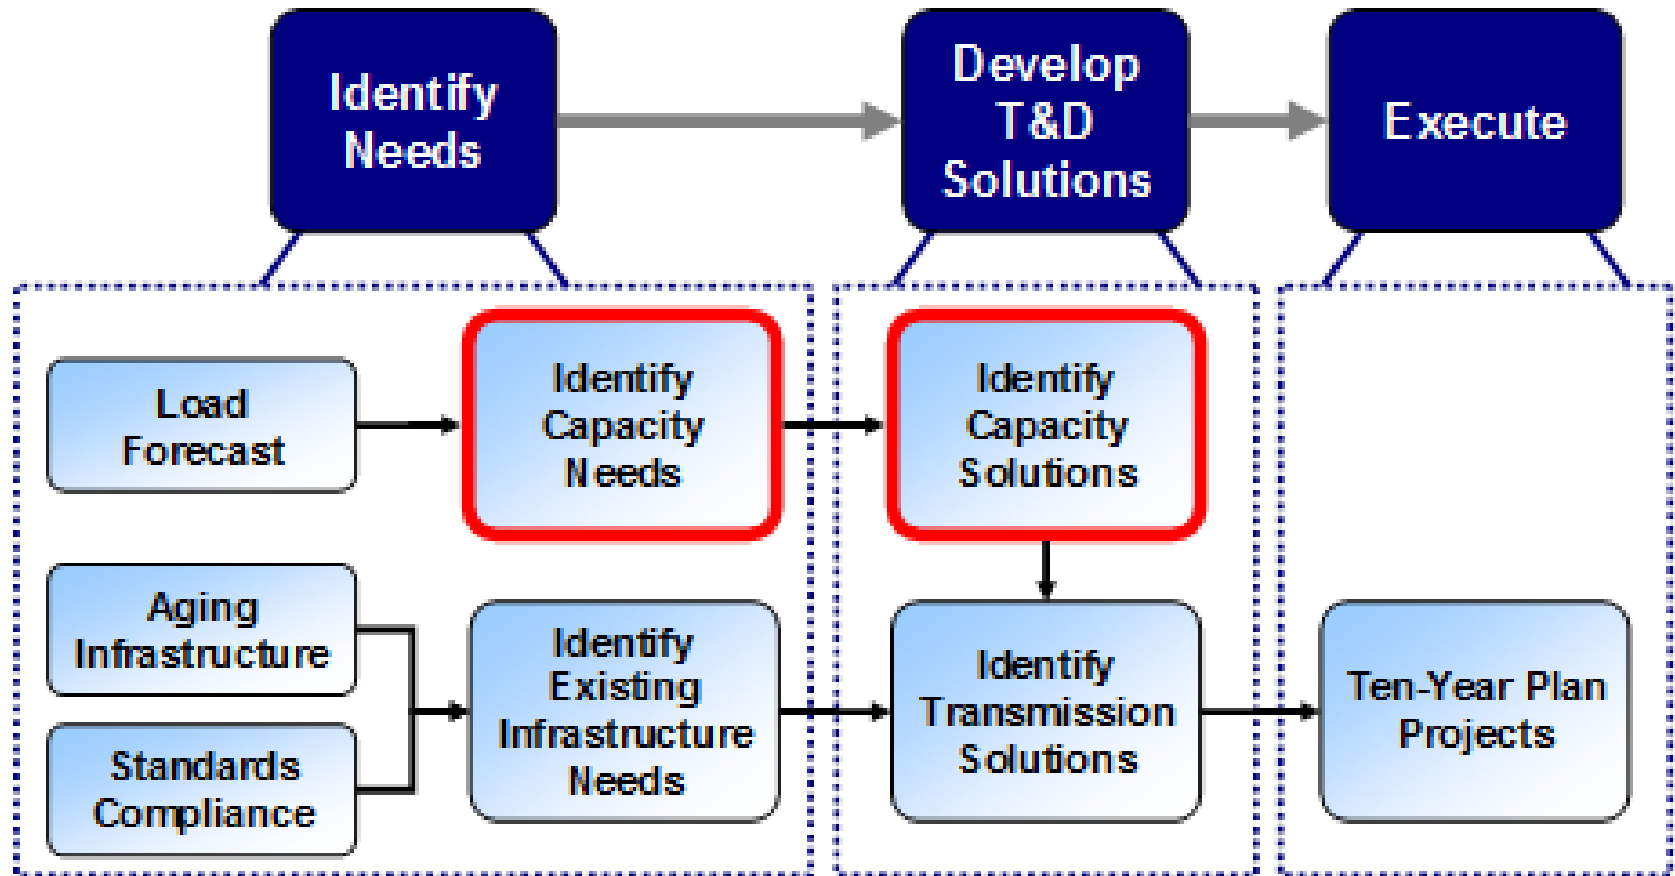

## Class-Level Load Factor Forecast Sub-Process

- Transferring load from one substation to another
- Increasing the capacity of existing substations
- Adding new substation capacity by constructing a new substation

## SCHEDULING PRIMAVERA

### Default Dashboard:

Primavera will open to your default dashboard, designed to provide information needed to manage your resources.

- Open Requests for Resources
- Resource Team Summary
- Project Schedules
- Resource Analysis Chart

The screenshot displays the Primavera P6 web interface for a user named 'Dist. Design Engineering'. The dashboard is organized into several panels:

- Open Requests for Resources:** A table showing project details, including Name, Unstaffed Units, and Staffed Units. The total unstaffed units are 10,112h and staffed units are 3,650h.
- Resource Team Summary:** A table listing resources, their primary roles, and the number of active projects. Resources include Anania, Claudio M., Arbono, Jacob M., Bonilla, Bryan J., Brickett, Isaac, Costabile, Peter C., Davis, Andre, Gagliardi, Robert J., Hackley, Richard A., Hart, Christopher M., and Lippone, Salvatore V.
- Project Statistics:** A table showing project scores for various projects, including 'TDPMD 10 CapEX'.
- Resource Analysis Chart:** A stacked bar chart titled 'Allocation for Dist. Design Engineers by Project' showing resource allocation across different projects.

### ***DISTRIBUTION INFRASTRUCTURE PLANNING***

*Robin Lyons, Lead Engineer*

*Infrastructure Planning*

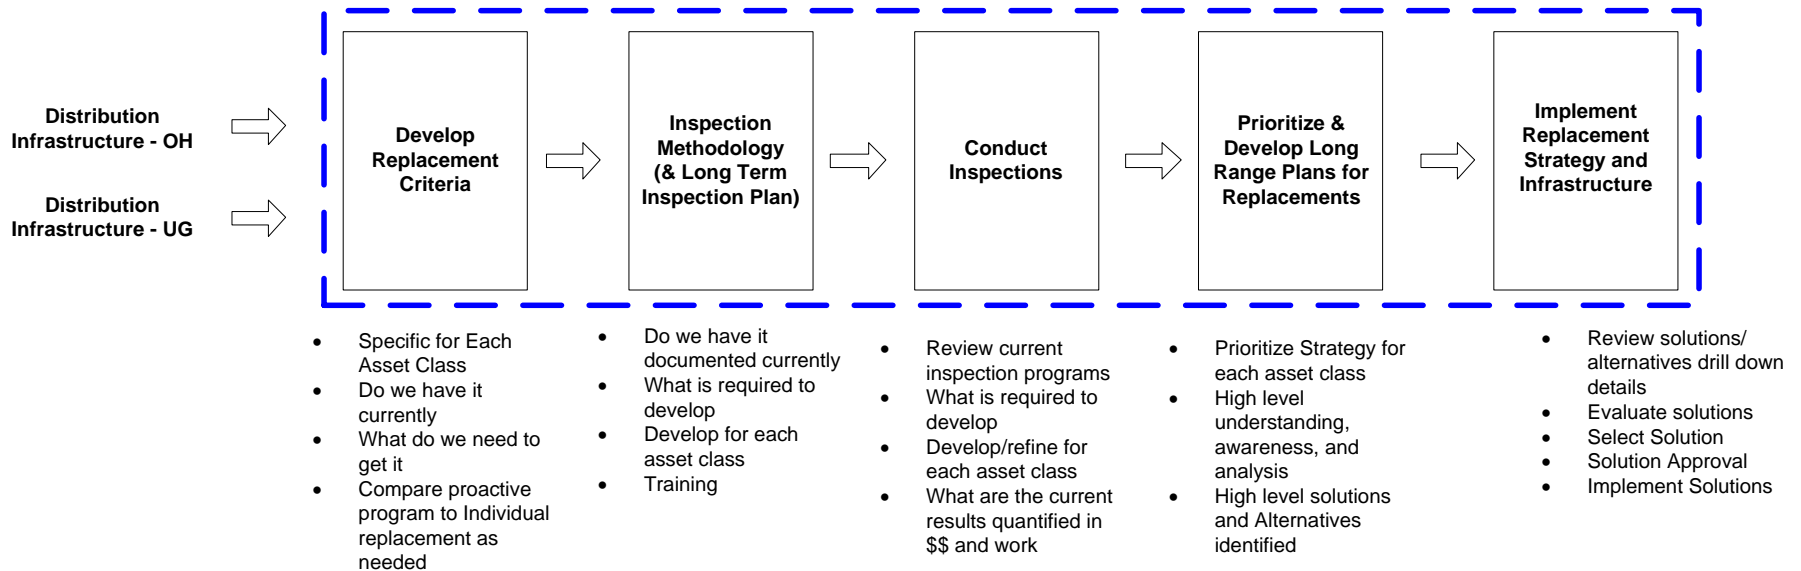

## Distribution Infrastructure Planning – Overview

- **This area develops short and long range plans to meet the infrastructure replacement requirements of UI's Distribution Ten Year Plan.**
- **The Infrastructure Planning (IP) Engineer has a central role in developing, planning and executing the strategic replacement of UI's aging distribution infrastructure.**
- **The Infrastructure Planning (IP) Engineer works closely with the Distribution Standards, System Integrity Planning, System Maintenance and Project Management areas to develop, plan and coordinate the inspection / replacement criteria, condition assessment methodology and analysis of selected types of electric equipment such as poles, splice chambers, vaults, cable, transformers, switchgear, etc.**

The United Illuminating Company

# Distribution Infrastructure Planning

The [Distribution Ten Year Plan](#) documents and projects capital expenditures associated with the proactive replacement programs over a “rolling” ten year period.

Each program is documented in three parts:

## 1. Program Overview

**Mark III Switchgear Remediation Program**

### Overview

- **Project Sponsor:** Chuck Eves
- **Project Manager:** Sue Ganci
- **Objective:** Remediate all 45 Mark II/III switchgear prior to failure, eliminating all of this type of switchgear by 2017
- **Business Need:** Maintain reliability by remediating the risk of extended multi-circuit service interruptions due to switch failure. UI has experienced four failures of these switches over the past 15 years, resulting in extended outages. Condensation and subsequent salt contamination will continue to occur as this switchgear is installed over open splicing chambers. As the contamination deposits on the porcelain insulator skirts, the risk of tracking and subsequent faulting of the switchgear increases.

- **In Scope:**
  - Switchgear replacement
  - Foundation work
  - Adjacent cable sections
  - Generator cots
- **Out of Scope:**
  - Relocation of switchgear
  - Redesign of distribution facilities
  - Cable replacement beyond adjacent sections of the switchgear
  - Maintenance

- **Replacement Strategy:**
  - Remediate switchgear installations by replacing Mark II/III switchgear with alternative switch designs
  - Total remaining Mark II/III switches(2012) = 31
  - Original Plan (2008): Remediate remaining Mark II/III switches by the end of 2017
  - Current Plan Status (2012): Remediate remaining Mark II/III by the end of 2015
- **Metric:** Switches remediated
- **Expected average units/year:** 6 Mark II/III switchgear units

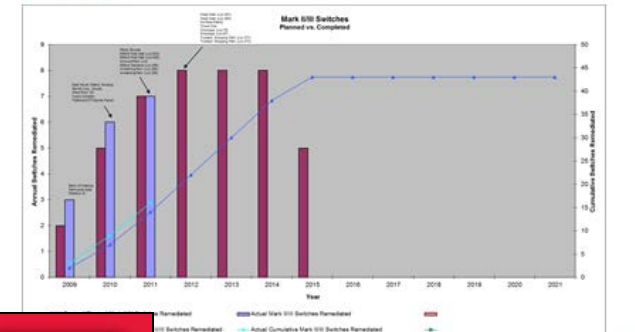

29

## 2. Metrics

**Mark III Switchgear Remediation Program**

### Metrics

**Mark III Switches Planned vs. Completed**

This chart shows the number of Mark III switches planned and completed from 2009 to 2021. The left Y-axis represents 'Actual Switches Remediated' (0 to 8), and the right Y-axis represents 'Cumulative Switches Remediated' (0 to 50). The X-axis represents the 'Year' (2009 to 2021). The legend includes: Planned (blue bars), Actual Switches Remediated (red bars), Cumulative Switches Remediated (green line), and Actual Cumulative Mark III Switches Remediated (blue line).

Year	Planned	Actual Switches Remediated	Cumulative Switches Remediated	Actual Cumulative Mark III Switches Remediated
2009	2	2	2	2
2010	4	4	6	6
2011	3	3	9	9
2012	4	4	13	13
2013	4	4	17	17
2014	4	4	21	21
2015	4	4	25	25
2016	0	0	25	25
2017	0	0	25	25
2018	0	0	25	25
2019	0	0	25	25
2020	0	0	25	25
2021	0	0	25	25

# UI Electric T & D

## Utility Exchange Program (Pakistan Distribution Companies)

### ***UI DISTRIBUTION STANDARDS***

*Mike Zaffina, Manager*

*Infrastructure Planning*

## What we do:

- I. Develop distribution construction and design standards for UI's electrical overhead and underground lines operating to 15,000 volts for use by the engineering and construction workforce.**
- II. Write engineering specifications for electrical equipment.**
- III. Create material specifications for various items; such as concrete products, poles, transformers, cable, etc.**
- IV. Serve as technical advisors (SME) for the application of electric equipment such as cable, transformers, switchgear, etc. to the engineering and construction workforce.**
- V. Follow updates in research and developments taking place in the power industry (Smart Grid, etc).**
- VI. Conduct root cause analysis on distribution equipment failures.**
- VII. Participate and represent UI on Industry associations (IEEE, ANSI, etc).**

*The United Illuminating Company*

# UI Distribution Standards

## Why do we need Standards?

- Safety of personnel and public
- Lower cost
- Uniform practices enhance productivity
- Conform to state & federal mandates

UIL HOLDINGS CORPORATION

*The United Illuminating Company*

## Construction Standards

- Tells you how to build and/or design it.
- Adherence to the National Electrical Safety Code (NESC) provides minimum safe clearances for the public and safe working clearances for the workers.
- Determines the most suitable means to provide a safe and reliable means to serve electrical loads.
- Considers required voltage, current and fault duty ratings.

UIL HOLDINGS CORPORATION

# UI Distribution Standards

- Example Construction Standard – Pole Top

12540 – Double Outrigger Arm
Std: 12540  
Pg 1 of 2

Lower limit of UI space on pole. See DCS 11515 for UI pole space allocation.

40" Min. NESC Safety Space

48" Phase – Neutral clearance required.  
56" Phase – Neutral clearance preferred.

UI Pole Tag  
See Note 5

**Notes:**

1. Use eight foot or ten foot crossarms as required to obtain adequate clearance from buildings, structures or to minimize the angle in the line.
2. Not for use with six foot crossarms.
3. See DCS-120 to determine guying requirements.
4. See DCS 12010 for corner feet calculations.
5. See DCS 11516 for UI pole space tag installation.

CONDUCTOR SIZE & TYPE	DOUBLE OUTRIGGER CROSSARMS DOUBLE PINS						
	AVERAGE SPAN LENGTH (FT)						
	100	125	150	175	200	225	250
	MAXIMUM ALLOWABLE CORNER FEET						
#4 CU	50	50	50	50	50	50	50
#2 CU	47	46	45	45	44	43	42
#2/0 CU	33	33	32	32	31	30	30
#4/0 CU	25	24	24	24	23	23	22
#1/0 AL	47	46	45	44	43	42	41
#4/0 AL	41	40	39	38	37	37	36
397.5 AL	19	19	19	19	18	18	18

Important: See DCS 12545 for corners exceeding these limits.

	<b>Distribution Standard Construction/Design</b>	Original	Revised	Revised	Revised

Cad File # Section - 125 Drawing # DS-12540-01 SEQ #: 040971 Revision 3/20/97 MEC

*The United Illuminating Company*

## Material Specifications

- Only required when an item isn't readily available via a catalog number
- Explains in detail the physical dimensions, type of material and strength requirements
- References to National Standards may be added (ASTM, ANSI, AASHTO, UL)
- Usually used for structures and hardware

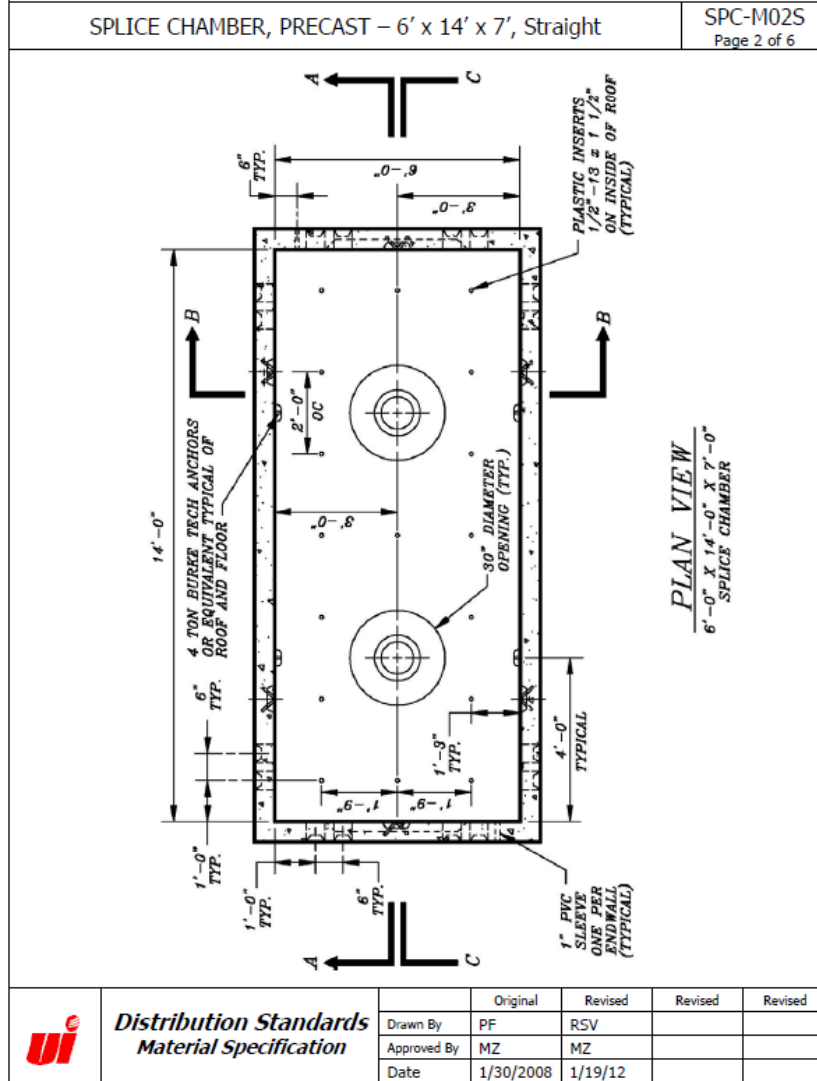

The United Illuminating Company

# UI Distribution Standards

- Example Specification – Splice Chamber

*The United Illuminating Company*

# UI Distribution Standards

## Distribution Equipment Specifications

- Similar to Material Specifications but are far more encompassing
- Covers transformers, cables, switchgear, radios, capacitors, oil etc.
- Items purchased to national standards; ANSI, IEEE, AEIC, ICEA

## Distribution Engineering Guides

These documents are intended to provide guidelines for the orderly development of overhead and underground systems design and construction, to meet the needs of our customers with an acceptable level of safety, reliability, flexibility, and economics.

### Example Topics Covered:

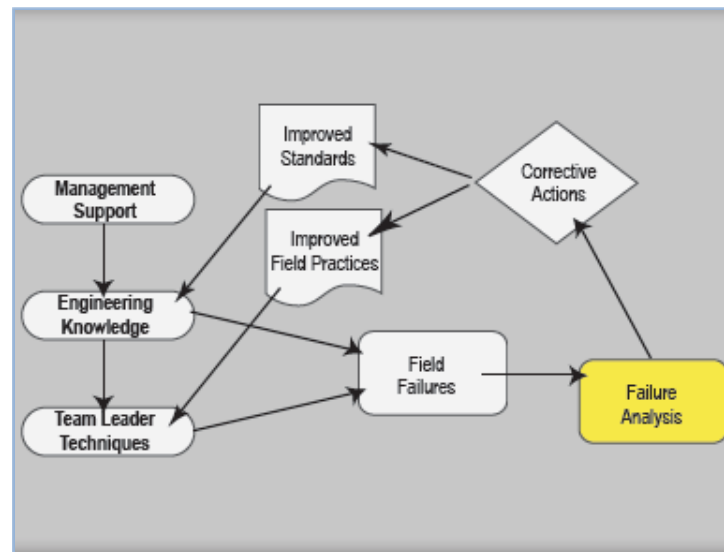

- Overhead Distribution Design
- Underground Design
- Grounding and Bonding
- Voltage Regulation

## Failure Analysis of Distribution Equipment

- Critical step toward maintaining and improving reliability.
- Provides a thorough understanding of what is failing and how to improve:
  - Standards, specifications and product selection
  - Field Practices
- Failure Analysis reports - central repository (UI - UER)

The United Illuminating Company

# UI Distribution Standards

## Example Investigation – Heat Applied Splice Failure

 <p>Layers not evenly shrunk.</p>	 <p>Wrinkled layers.</p>
 <p>Oil found between splice layers in heat shrink transition joints.</p>	 <p>Improper connector used CU connector on aluminum conductor. (Found on wye and straight splices)</p>
 <p>Arc proofing tape installed under splice jacket.</p>	 <p>Water intrusion.</p>

UIL HOLDINGS CORPORATION

*The United Illuminating Company*

## Other Document Types – References

- National Standards Library: ANSI, IEEE, AEIC, ICEA (current and historical)
- Equipment Catalogs and instructions docs (current and historical)
- Old UI Standards and Specs (historical)
- UI and Industry Engineering and research studies (current and historical)

# UI Electric T & D

## Utility Exchange Program (Pakistan Distribution Companies)

### ***SYSTEM TOOLS – GIS MAPPING OF DISTRIBUTION NETWORK***

*Peter Sampiere, Supervisor*

*GIS*

- Background
- Technical Details
- User Community
- Work Examples

**UI's GIS started as a mandate from the DPUC in 1985; the regulatory body wanted all of our assets stored in an electronic database.**

## Current GIS

- ESRI ArcGIS/ArcMap
- Telvent's ArcFM 9.3.1\*
- Oracle 10G
- Citrix
- ArcView 3.3 (GIS Lite)

\* - ArcFM is a GIS add-on that is tooled specifically for use by utilities. It allows users to trace circuits using connectivity, and uses a tool called feeder manager which makes certain changes to the data programmatically. It also comes with a feature called "Map Books," which allows us to better organize and print our standard map products.

- UI's GIS System is an As-Built, Normal Operating Condition, database. It is updated on a continuous basis. Extracts from our GIS are used in other applications, such as OMS, GIS Lite, and CYME.
- OMS is our Outage Management System
- GIS Lite is our GIS viewing tool, used primarily by our engineers
- CYME is a circuit analysis tool used by our planning area

Every night, Customer data is fed to our GIS from SAP, this information is then linked to our service points.

## Current Users

- 5 Full Time Editors
- 22 Concurrent ArcView Licenses

Our GIS is used by:

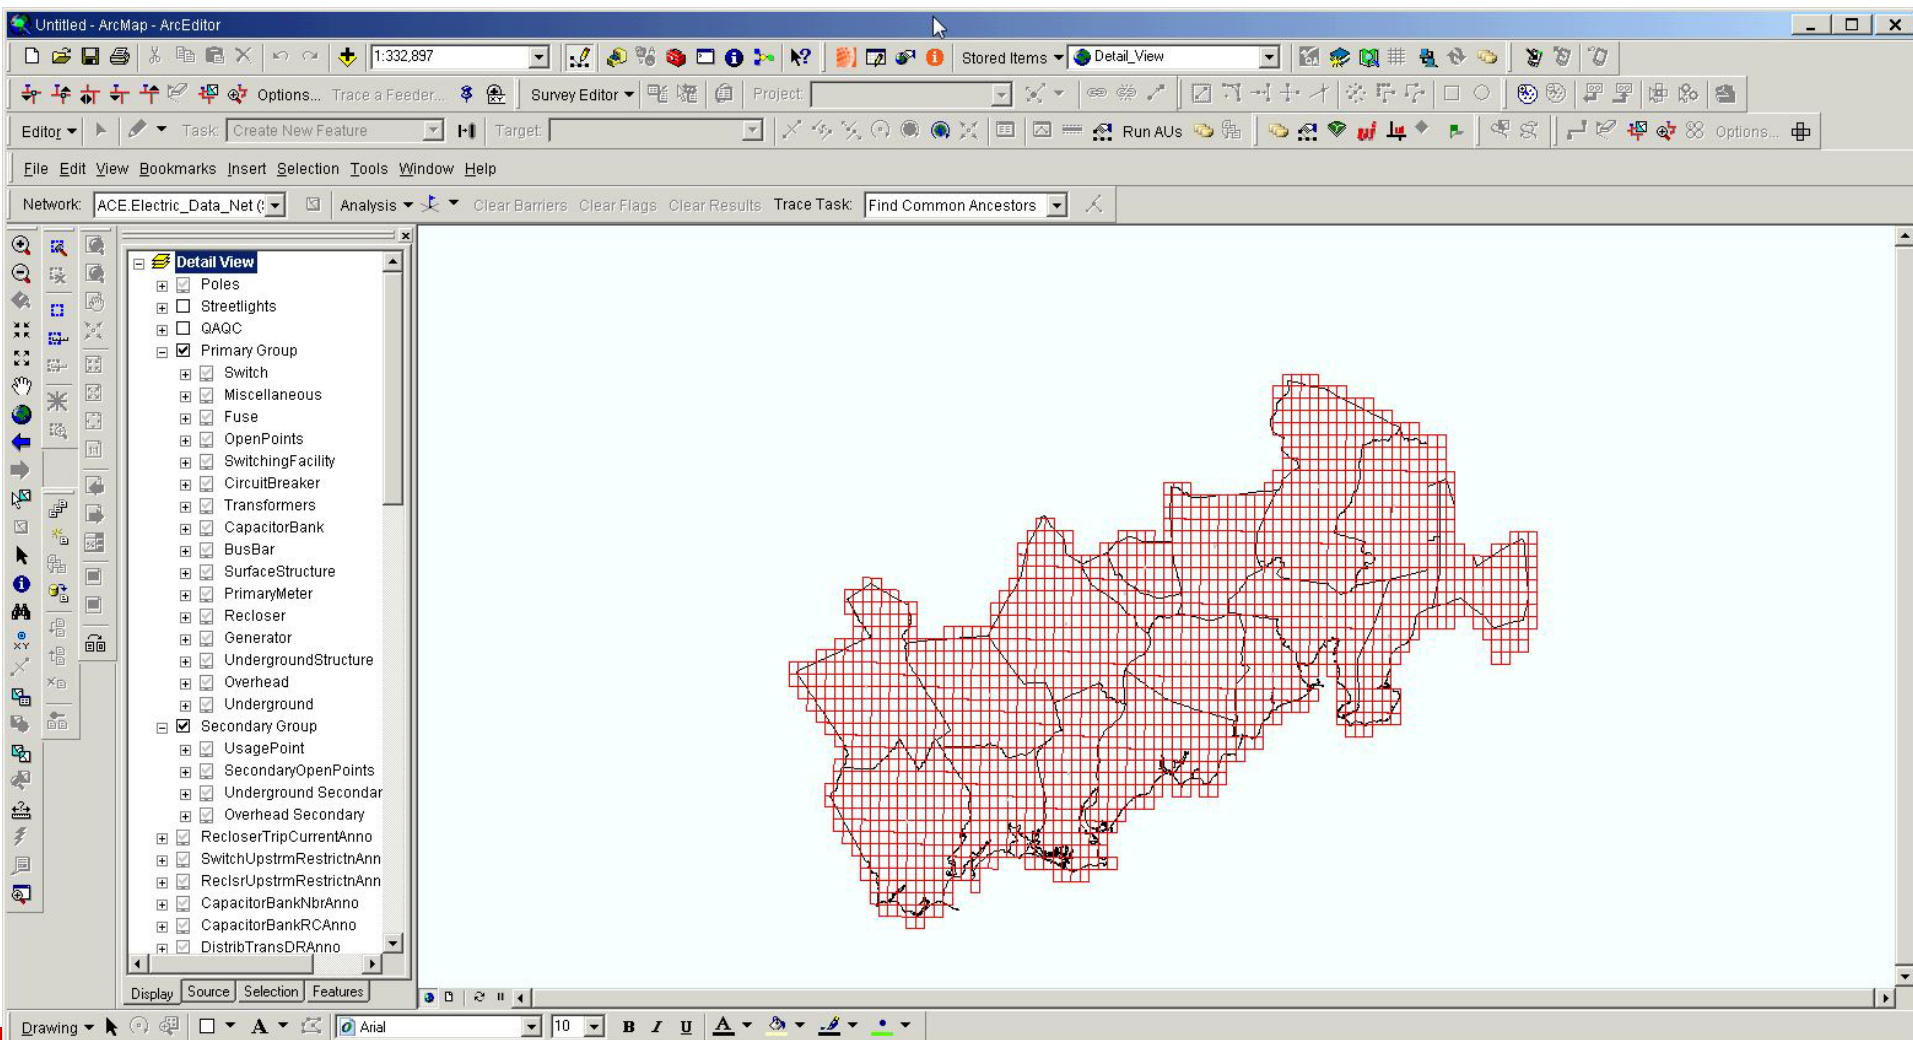

- Engineering Groups
- System Operations
- Maintenance
- Planning
- Construction
- Storm Restoration
- Lighting.

- Our various Engineering groups use GIS to reconfigure or design electrical circuits, using data extracts as well as maps.
- System Operations uses GIS extracts to populate the data in their OMS (Outage Management System), as well as paper maps as a backup system. The extracts for OMS are updated nightly.
- UI's Maintenance Department uses GIS for – Vegetation Management, Transmission Line Inspections, and Splicing Chamber Inspections. They also use data extracts, such as a cable miles report, and custom tree-trimming maps.
- The Planning Area uses GIS to map out and plan improvements to select circuits in our system. They take circuits extracted from GIS, and import them into our CYME circuit analysis application.
- The Construction area uses GIS maps for Work Requests and Field Inspections.
- Storm Restoration uses GIS extracts through the OMS system, as well as Storm Patrol Maps for our Damage Assessment Crews to take into the field to identify damaged equipment for our repair crews.
- Our Lighting Group can now use GIS to find Streetlights and Private Area Lights that we are billing, since all of our Lights are now in GIS.

UI uses Telvent's ArcFM, which is ESRI's ArcGIS customized for utilities.

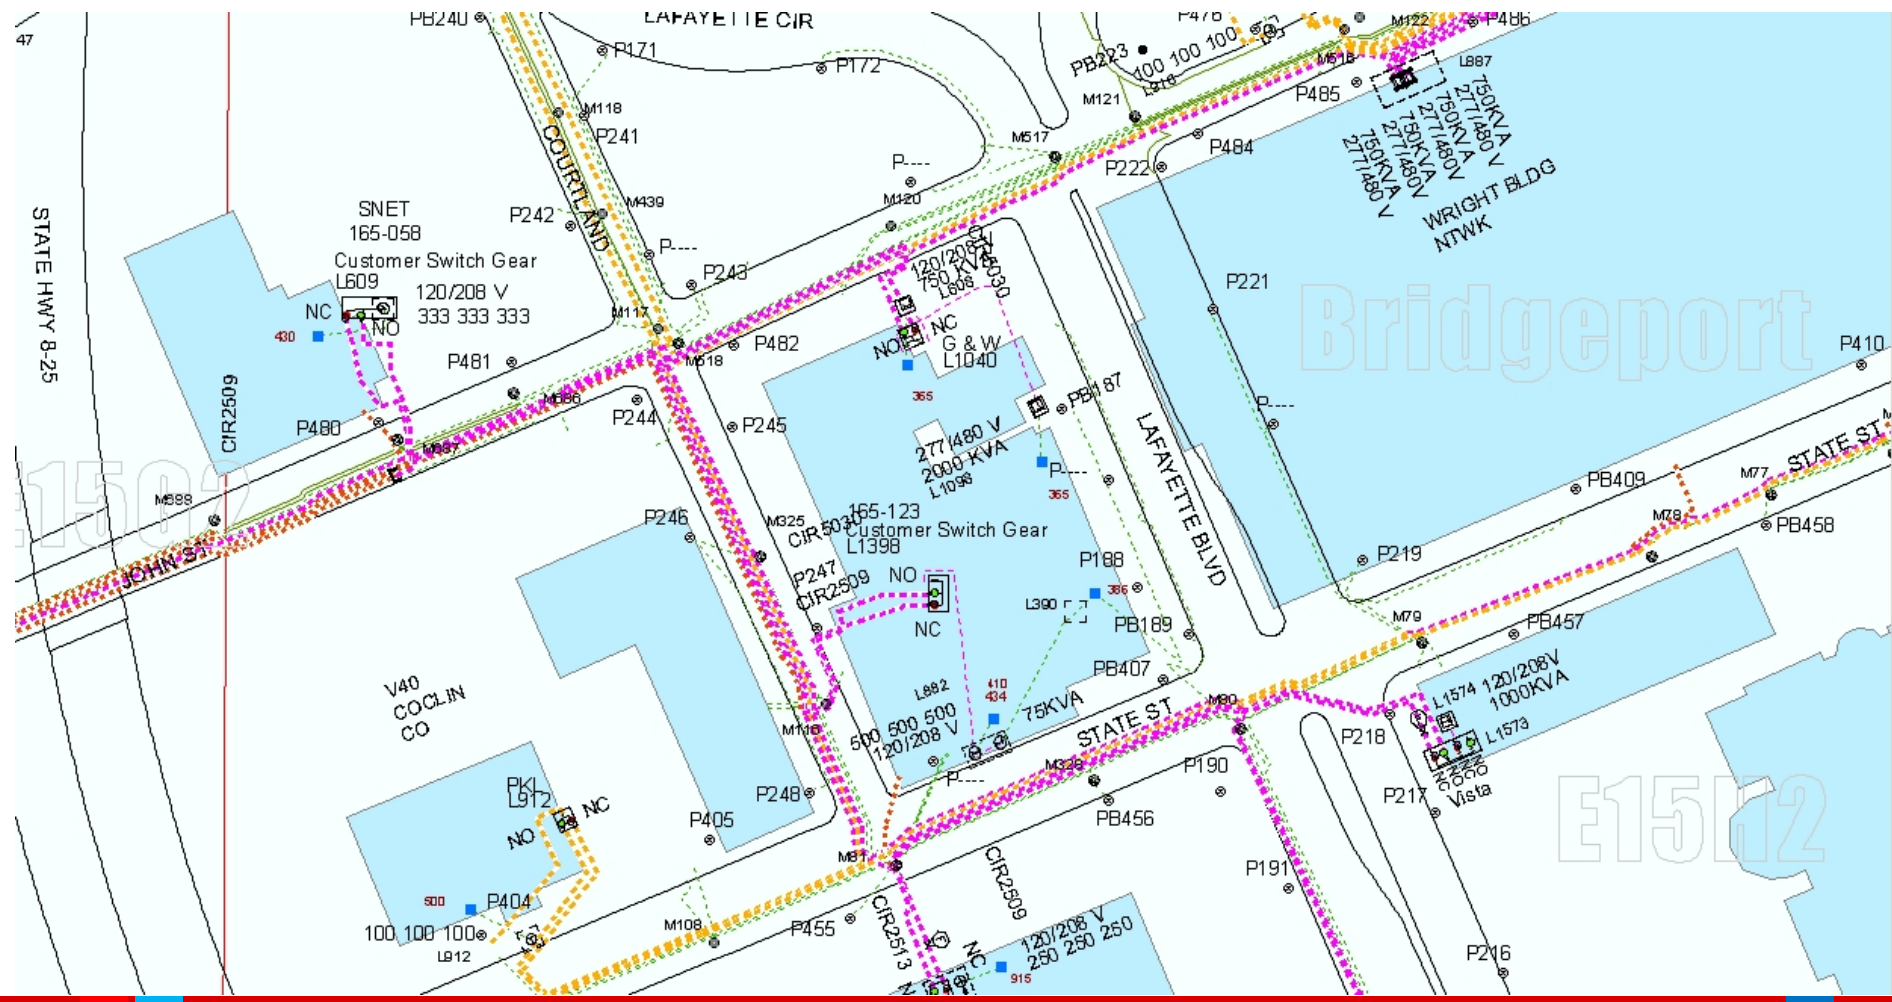

The United Illuminating Company

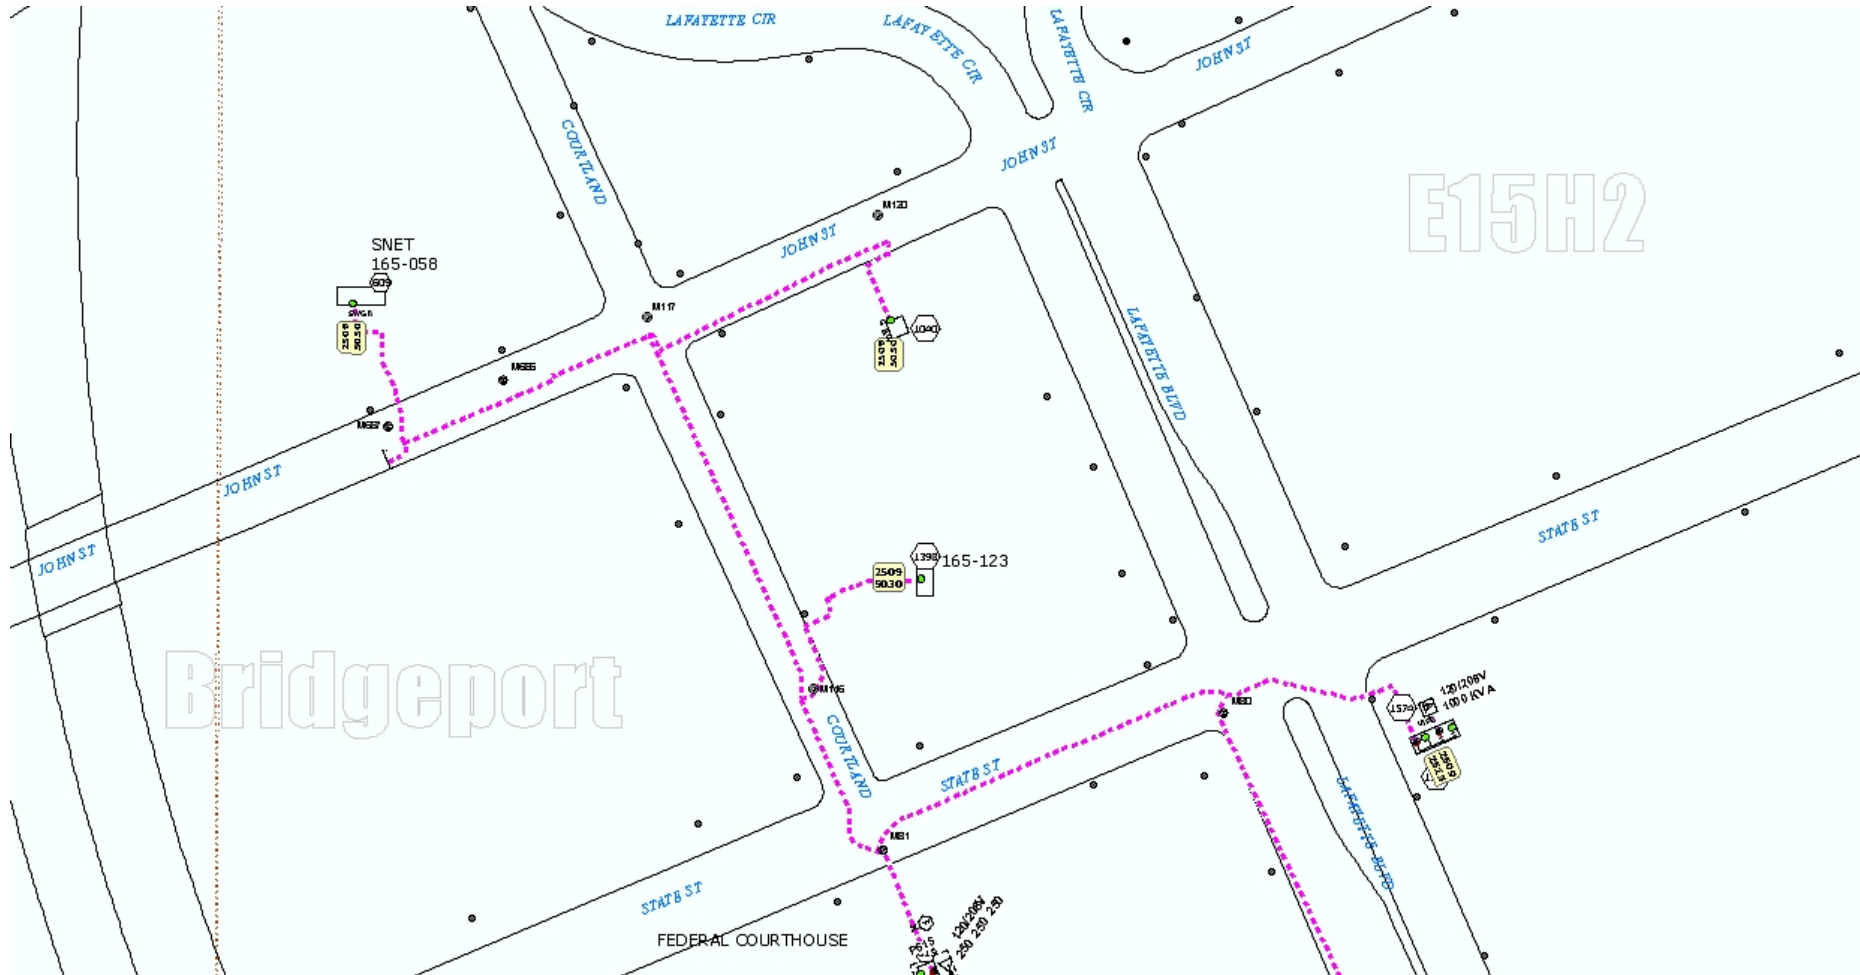

# Detail View

- The Detail View shows UI's assets from the Circuit Breaker, right down to the Meter.
- There are approximately 1700 Detail Maps that make up UI's Territory.
- Paper Detail Maps are still maintained as a back up system
- Detail Maps are 100' Scale

# Primary Circuit (PCM) View

- The Primary Circuit View shows a filtered view of UI's Assets; from the Circuit Breaker, down to the Transformer/Switch Level, No Secondary Features.
- There are approximately 400 PCM's, one map(s) per circuit.
- PCM's vary from one sheet to as many as eleven sheets.
- The Scale Factor of PCM's varies by circuit.
- There are also paper PCM maps hanging in the System Operations Center.

- The Feeder Mainline Map (FMM) shows UI's assets from the Circuit Breaker to major tie-points (i.e. Air-break Switch, Recloser, Vista Switch, Etc.)
- There is No Secondary on a FMM
- The original goal of the FMM was to fit the extent the circuit's Feeder on one sheet, but for readability reasons, a small amount have two sheets.
- UI's definition of Feeder is 3 Phase, un-fused open wire or cable.

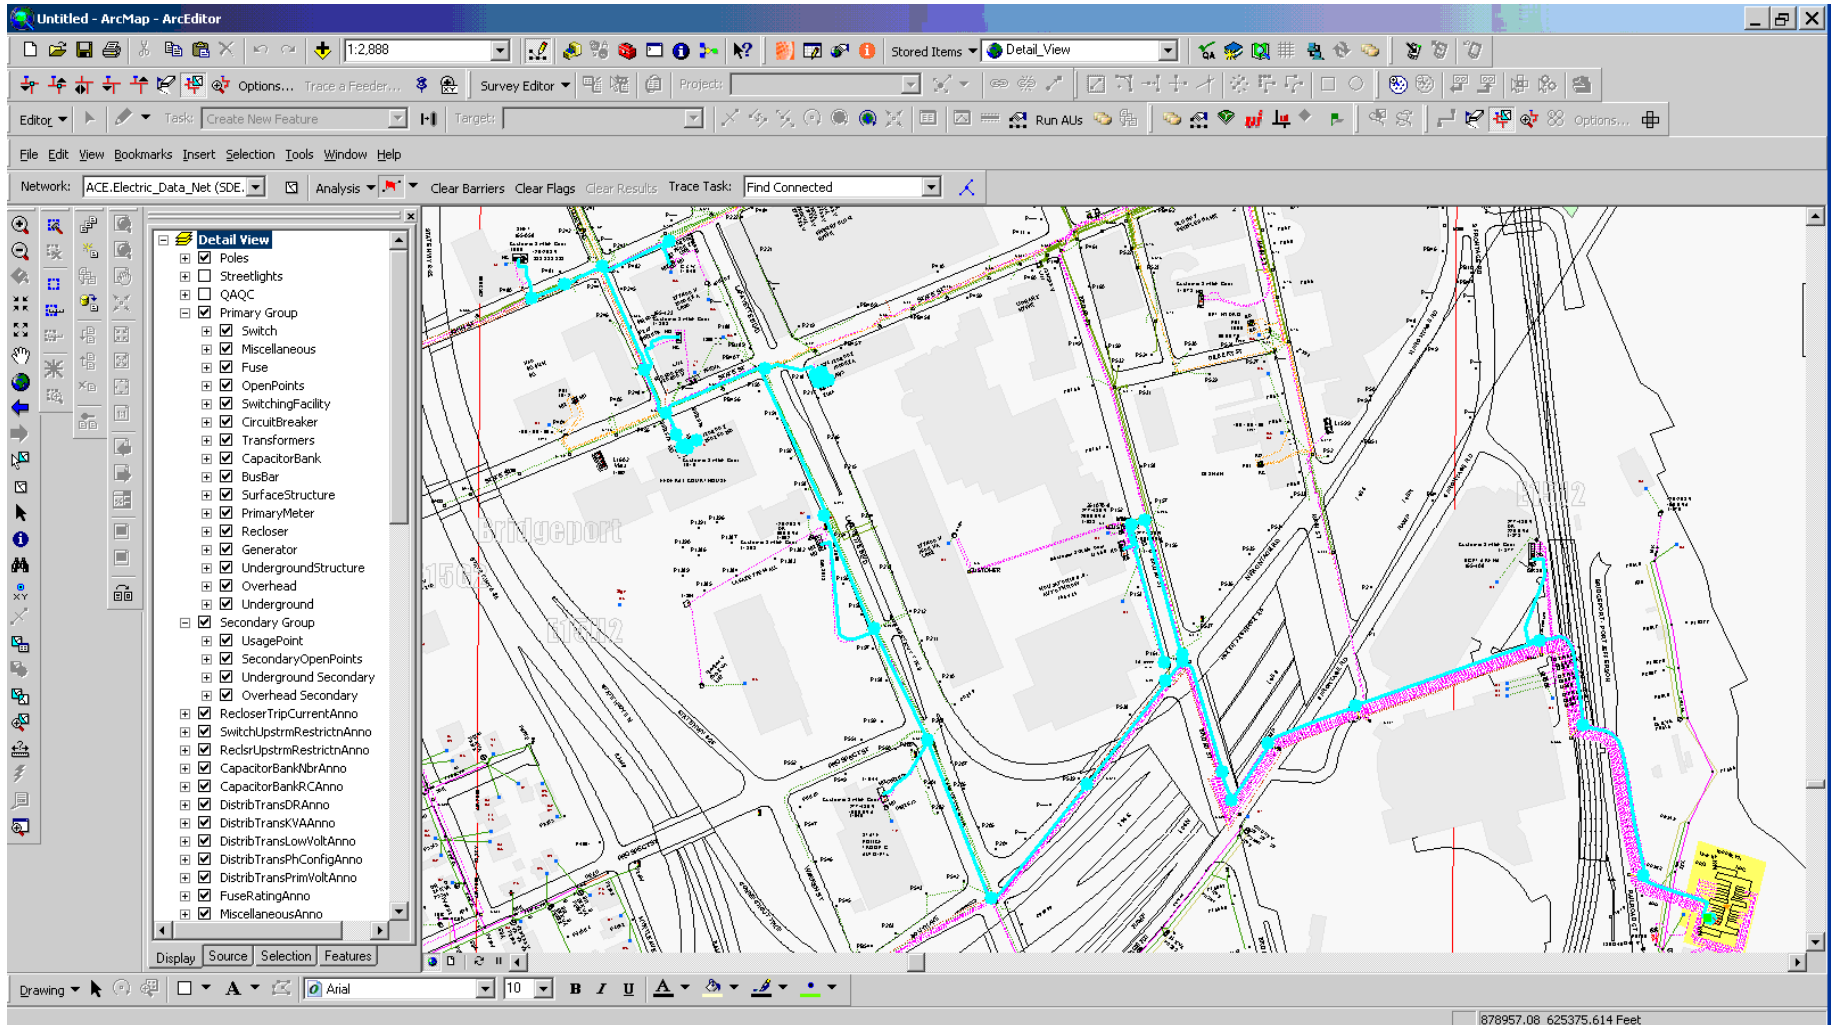

The United Illuminating Company

# GIS - Trace

The “Find Connected” trace finds all features connected to the selected circuit

# UI Electric T & D

## Utility Exchange Program (*Pakistan Distribution Companies*)

### ***UI PROTECTION & CONTROL***

*Bob Pellegrini, Manager*

*Protection & Control*

- System P&C Engineer
- What do we do?
- Design systems to “PROTECT” people and equipment from harm during times of electrical faults or when electrical devices and or equipment fails or is damaged.

- Protection Systems
- Fuses and/or Protective Relays constantly monitor the power lines to check for problems.
- Their Job is to instantly disconnect power lines during times of unplanned system events to protect equipment and personnel
  - Lightning
  - Pole Hit
  - Hurricane or other weather events
  - Equipment Failure
  - Human error

## Substations

- Protection & Control Equipment.
- Electronics to Protect Equipment and Personnel
- Controls to operate system equipment.
- Circuit Breakers
- Switches
- Transformers
- Telecommunications Equipment
- Fiber optic Nodes and equipment.
- SCADA Equipment

The United Illuminating Company

UIL HOLDINGS CORPORATION

The United Illuminating Company

©1995 Niagara Mohawk Power Corporation

UIL HOLDINGS CORPORATION

*The United Illuminating Company*

# Protection and Control

## Transmission Protection Characteristics:

- **Interconnected Transmission Grid as opposed to Distribution**
- **High Energy requires fast detection (1/4 cycle) sectionalizing and elimination of system disturbances**
- **Higher level of transmission complexity requires more sophisticated protection designs**
  - **Microprocessor based relays for speed, SOE , and recording capability**
  - **Independent primary and backup relay protection schemes**
  - **Physically Independent communication channels**
  - **Separated Physical control panels (Primary and backup separated in control room)**
  - **Separated and independent control cables**
  - **Digital Fault Recorders (DFR's) required to record relay events due to speed of operation**
  - **Reclosing employed; 90% faults lightning and temporary**

UIL HOLDINGS CORPORATION

## **Distribution Protection Characteristics:**

- **Radial circuit designs; not as complex as Transmission**
- **Circuits connected together only during switching**
- **High fault currents; Open bus ties; Arc Flash**
- **Reclosers used for fast restoration on mainlines**
- **Communication to pole top devices through hybrid Fiber RF Solution**
- **Side tap fuses**
- **Relays coordinate with all field devices; Customer switchgear, pole top reclosers,**
- **Distributed Generation permitted**
  - **Fault Current analysis**
  - **Interconnection Agreement**
  - **Impact analysis**
  - **Relay design and coordination study**

# UI Electric T & D

## Utility Exchange Program

*(Pakistan Distribution Companies)*

**SCADA**

*Bryan LaPerle, Manager*

**SCADA**

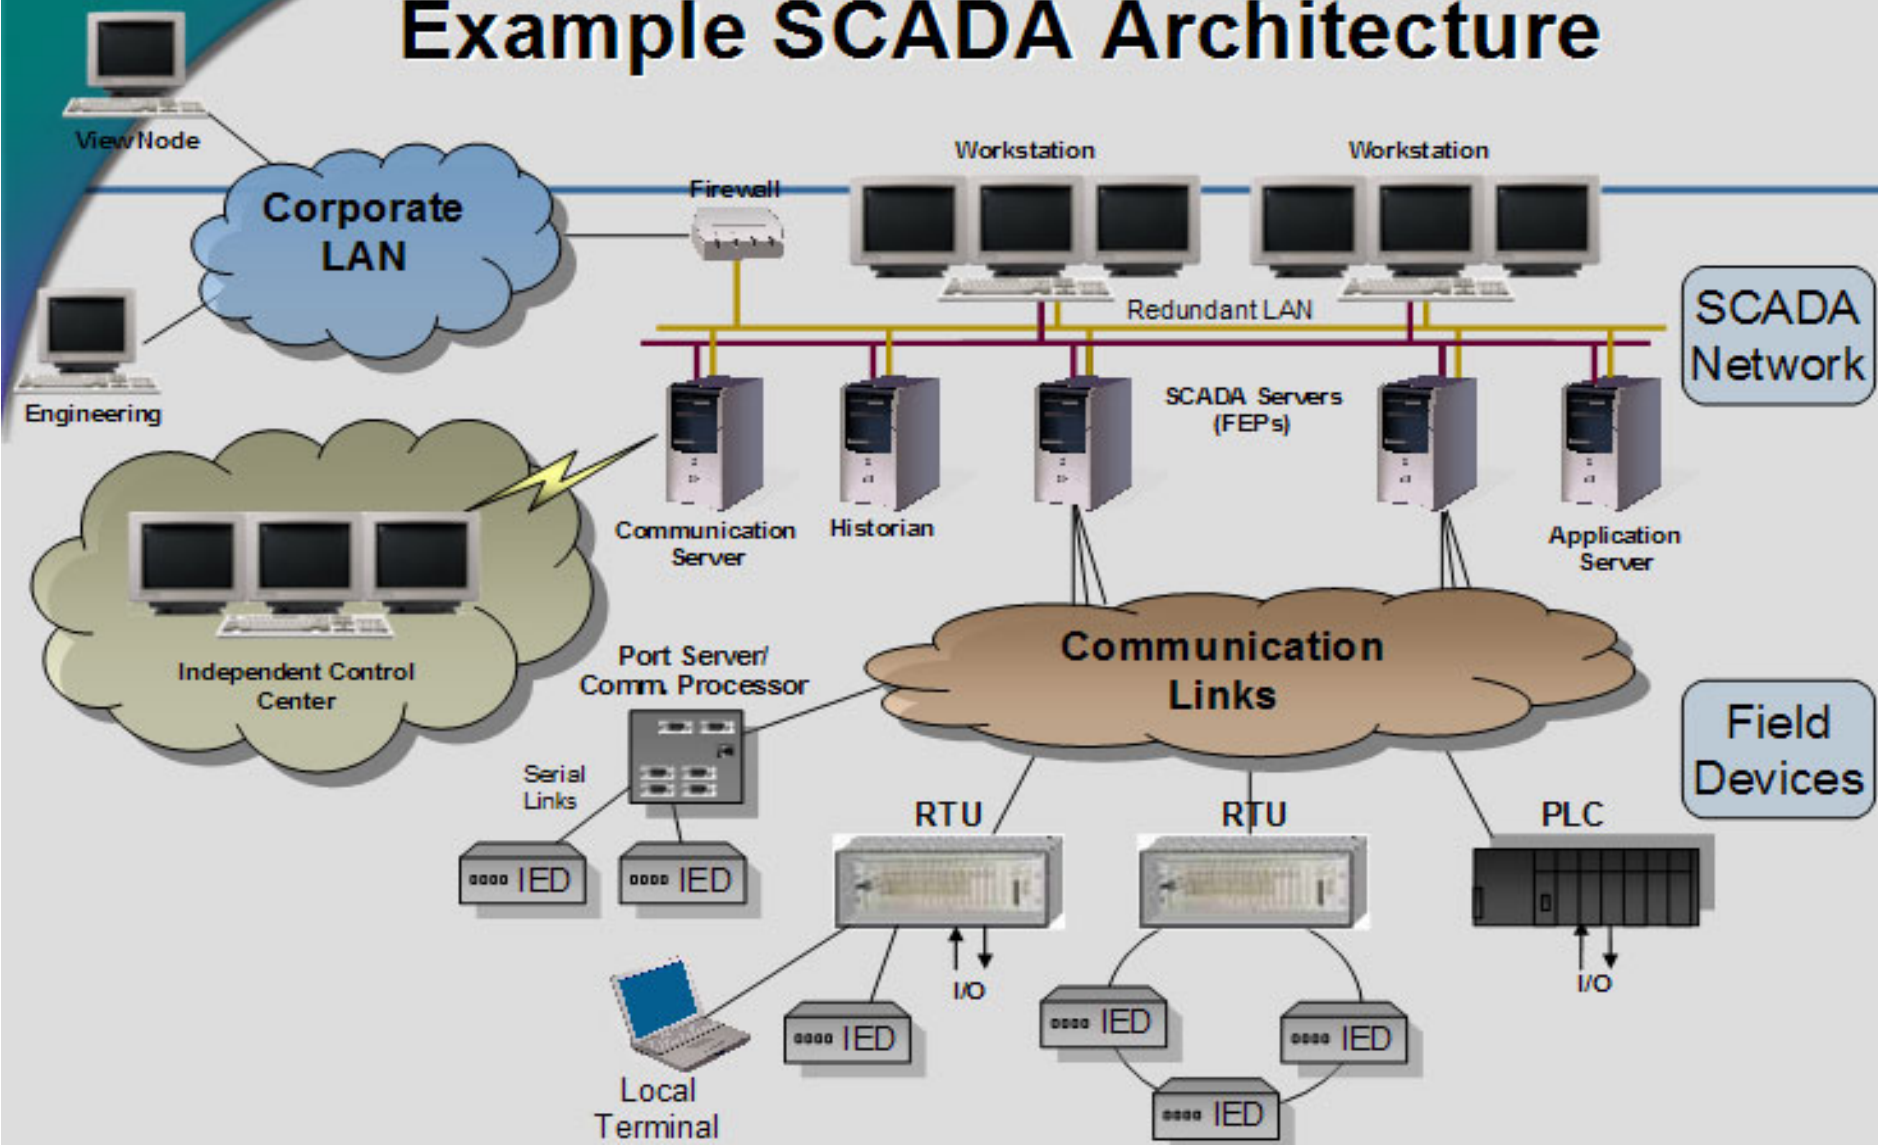

## What is SCADA?

**S**upervisory  
**C**ontrol  
**A**nd  
**D**ata  
**A**cquisition

Any application that gets data about a system in order to control that system is a SCADA application and a SCADA application will contain two elements.

- The process or system that you want to monitor and control.
- A network of intelligent devices that with the monitor and control the system through sensors and control outputs.

# Example SCADA Architecture

## How SCADA Systems Works....

- **Data Acquisition** – Refers to information received from sensors or transmitting devices.
- **Networked data communication** - The protocol means required to communicate between devices. This communication may be made up of several protocols.
- **Data presentation** - The SCADA system continuously monitors all sensors and alerts, with a comprehensive view of the entire managed system. (This can then be viewed by an operator through the SCADA operational interface)
- **Control** – A system that responds to inputs from your system or inputs initiated by and individual.

## Keys to a successful SCADA system

- Robust Network Communications and Infrastructure
- Network Security
- Database Configuration
  - Proper alarm configurations
  - Standardizing normal and emergency operation modes
  - Set up a standard for database tagging
  - Configure for possible future expansion of your system needs
- Integration of field devices
  - Communications strategy to the field devices
  - Flexibility to accommodate all the open protocols
- Historical Data information access to business users.
- Maintaining a development and Quality Assurance platform

- Disclaimer

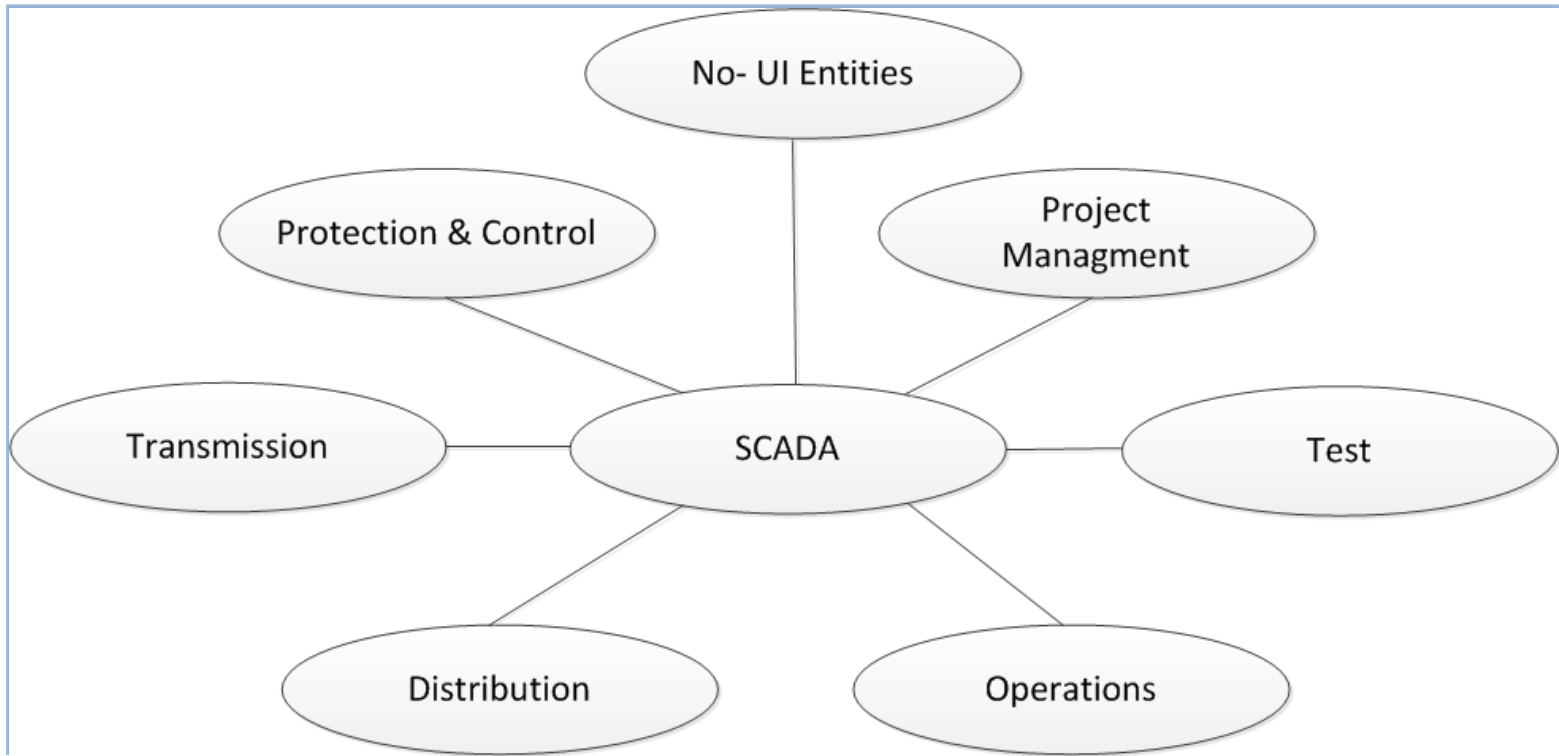

- Due to Regulatory requirements, United Illuminating is unable to share detailed information about our SCADA system.

**SCADA supports multiple groups within the United Illuminating company.**

# Protection & Control

- **Used for Fault Analysis**
- **Used for coordination Analysis of Equipment**
- **Primary Data used by this group is for information about.**
  - **Relay operations**
  - **Breaker operations**
  - **Disconnect Switches**
  - **Etc...**

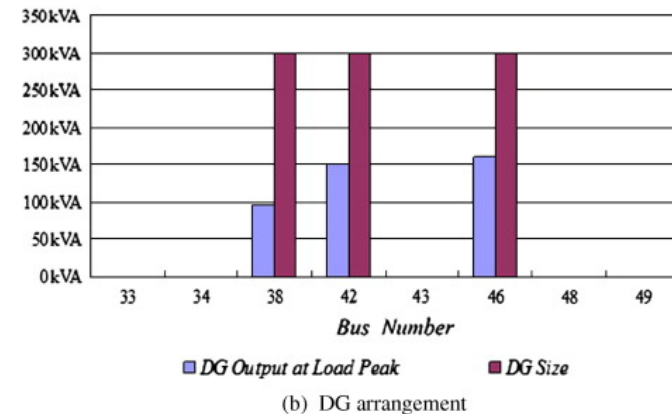

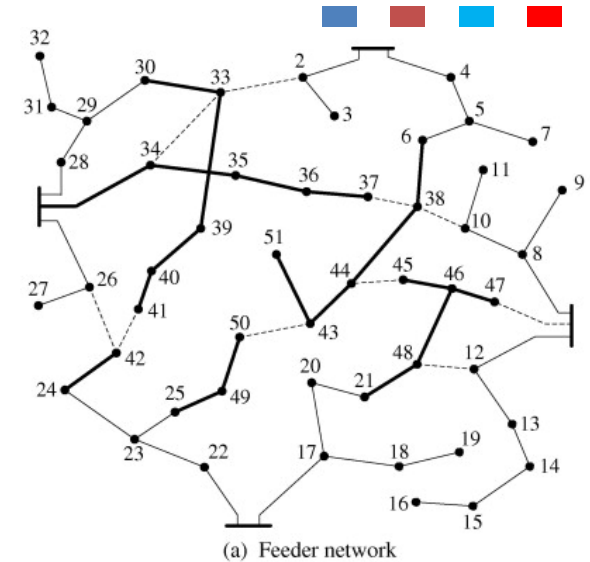

# Transmission

- Used for Transmission Planning Analysis
  - Line ratings calculation verifications
  - Historical data collected to perform cable and transformer degradation analysis (loss of life).
  - Historical data that support existing project schedules as well as verify future projects and prioritize appropriately.
- Primary Data used by this group is for information about.
  - Analog data reports various time intervals which may include values of the minimum and maximum values of the data.

## Distribution

- **Used for Distribution Planning Analysis**
  - Historical data collected to Correct overloaded feeder ratings
  - Historical data collected to Correct unbalanced load problems on feeders
  - Historical data collected to perform cable and transformer degradation analysis (loss of life).
  - Historical data that support existing project schedules as well as verify future projects and prioritize appropriately.
  - Historical data to maximize the operation of the Power Factor Correction Program.
  
- **Primary Data used by this group is for information about.**
  - Analog data reports various time intervals which may include values of the minimum and maximum values of the data.

## Operations

- **Primary use is the Real Time Operator Interface to SCADA**
  - Perform all switching and tagging functions
  - Monitoring the loading of lines and feeders during switching and abnormal circumstances.
  - 24/7 monitoring of the system
  - Responding to generated SCADA alarms and conditions, that may require dispatch of the proper work force to respond to the alarms.
  
- **Primary Data used by this group is Real Time Data**
  - Attribute reports shows the abnormal alarms on the system
  - Analog data reports various time intervals which may include values of the minimum and maximum values of the data.
  - Event data in order to respond to an alarm or system condition occurrence.

## TEST

- **Primary use is the Real Time Operator Interface to SCADA and Event data**
  - **Respond to Alarm conditions**
  - **Validate real time load flows on relay schemes**
- **Primary Data used by this group is:**
- **Real Time Database reporting for what is actually happening on the system as it happens.**
  - **Attribute reports shows the abnormal alarms on the system**
  - **Analog data reports various time intervals which may include values of the minimum and maximum values of the data is used by the Test department for historical data trending .**
  - **Event data in order to respond to an alarm or system condition occurrence.**

# Project Management

- Supporting them in identifying the SCADA tasks and estimated time along with the order the activities take place. Also identifying if other groups are needed in order for our activities to be completed.
- Specification review
- Definition of SCADA related activities associated with a project
- Time estimates for SCADA activities
- Identifying additional resources required to support SCADA activities.
- Providing direction to the Project Management team around regulatory compliance requirements.

# Stakeholder Benefits and Value Proposition

## Regulators

- Time of Day and Daylight Savings
- Net Metering
- Flexible Rate Options
- Demand Response
- Conservation and Load Management

## Customers

- Customer Empowerment
- Self Service Options
- Billing and Payment Preferences
- Real Time Energy Management

## Company Efficiencies

- Outage Management
- Theft Detection / Low Use
- Remote Turn On – Turn Off
- Meter Accuracy
- Improved Asset Utilization (Txfs)
- Operations - DR & ISO

## Savings

- Collections
- Field Visits
- Labor Efficiencies

## New Opportunities

- ▶ Notification / Monitoring Services
- ▶ Residential Interruptible Rates
- ▶ Threshold Alerts
- ▶ Consolidated Billing
- ▶ Advanced Distribution Automation, Outage & Work
- ▶ Prepayment

The United Illuminating Company

# AMI Network – Hybrid One & Two Way

- Distribution Automation
- Home Automation
- Load Management

L+G Host System

Other Applications

Take Out Point

Nth Take Out Point

Gridstream Two-way Meshes Net

- Transmit-Only
- Gas
  - Water

- Water/Wastewater Applications
- Reservoir Management

- Capacitor Bank

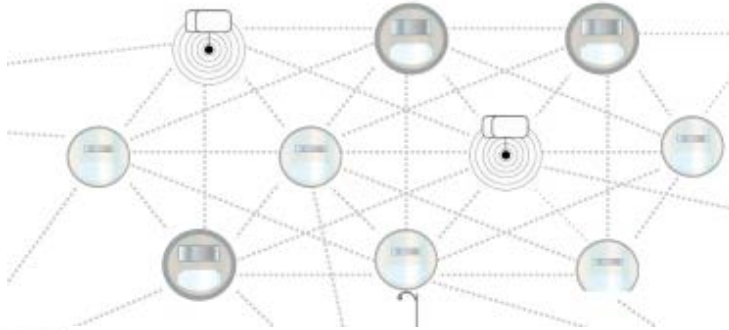

UIL HOLDINGS CORPORATION

- Over 337,000 total UI meters –
  - 100,000 two-way  ZigBee Smart Energy
  - Meters have
  - Meters read every day w/15Min interval data available
- 4100 Concentrators [2-way meters act like repeaters as well]
- 30 Collectors
- Mesh Network - RF, Fiber and...
- Master Data is stored in MDM - interface with SAP
- Robust billing process - electronic presentment to payment
- *Outage Management System* uses meter intelligence for restoration and communication
- Over 33% of our customers have Time-of-Day option

## COMMAND CENTER

## MDMS

- Enhanced Outage Management integrating MDMS**
- Real time notification and reporting of outages**
- Predict Transformer Outages based on meter reporting**
- Recognize Planned Work vs. Unplanned Outage (Future)**
- Voltage Monitoring**

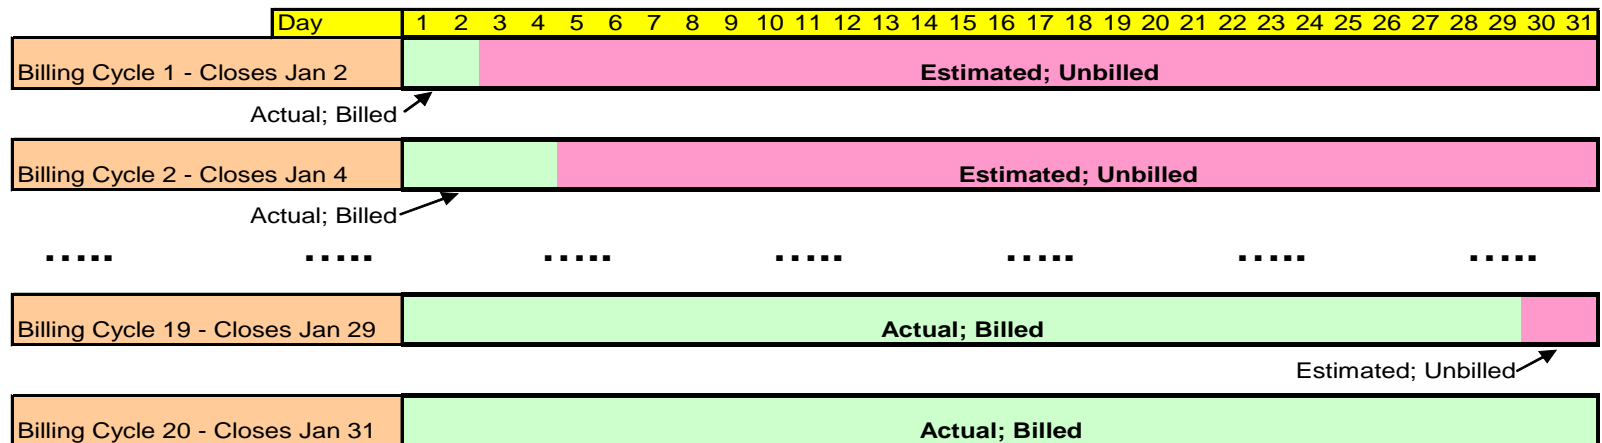

## Using the information from AMI meters:

- Improve Billing Accuracy
- Identify and reduce illegal usage
- Eliminate unbilled estimates by receiving actual reads at end of month for every meter.

## Unbilled Revenue

# Presentation Topics and Tips

- SAFETY FIRST – FR CLOTHING
- INSULATE AND ISOLATE
- RUBBER GLOVING
- RUBBER GOODS
- LINK STICK REQUIREMENTS
- LIVE LINE TOOL REQUIREMENTS
- EPZ GROUNDING
- FIELD PHOTOS

UIL HOLDINGS CORPORATION

## ***SAFETY FIRST – BEGINS WITH THE PROPER UTILIZATION OF ALL PPE – Personal Protective Equipment/FR Clothing***

- Flame resistant clothing shall be worn when an employee may be exposed to an electrical hazard.
- FR Clothing enhances employees' personal safety and is considered a component of personal protective equipment (PPE), but is not considered a replacement for any additional PPE that is required for specific tasks and operations, as specified in UI's Safety Manual.
- Frequent Users are those employees who have been determined to have the greatest exposure to electrical hazards and, as such, are required to wear approved FR garment at all times during the course of performing their regular job duties.
- Introduction: Line Worker First Class and Union Safety Officer Chris Jensen
- *Chris is modeling "some" of the FR Clothing items that may be used in an average workday.*

## BRIEF DEFINITION

- The worker is **“INSULATED”** by using approved and properly tested protective equipment, specifically rubber gloves, rubber sleeves, and insulating cover-up equipment.
- The worker is **“ISOLATED”** by using an approved insulating aerial device, which is also an additional layer of insulation.

## RUBBER GLOVING ABOVE 5kv

- Rubber glove work performed at voltages above 5Kv shall be done utilizing the principles of **“Insulate and Isolate.”**

## Rubber glove and sleeve requirements

When rubber glove work methods are employed for primary work, approved and properly tested rubber gloves and sleeves shall be worn.

# Direct Handling (Rubber Gloving) Procedures above 600 volts cont.

Inspections required before rubber gloving (applicable to ALL primary voltages)

- a. Rubber gloves – should be visually inspected AND air tested before beginning work.
- b. Rubber sleeves - should be visually inspected before work.
- c. Rubber insulation (blankets, line hose, hoods, etc.) should be visually inspected before use.
- d. Fiberglass boom(s) of insulated aerial device should be visually inspected and cleaned as necessary.

# Direct Handling (Rubber Gloving) Procedures

## Cover-up practices (applicable to ALL primary voltages)

- a. When working on energized conductors and equipment using rubber glove work methods, all energized conductors and equipment within maximum reaching distance of any part of the employee's body shall be covered with approved protective equipment, except that portion which is actually being worked on.
- b. When working on energized conductors and equipment, all other items, including conductors, equipment, guy wires, neutrals, telephone and/or CATV cables, grounds, possible grounds, and portions of poles and cross arms within maximum reaching distance of any part of the employee's body shall be covered with approved protective equipment.

# Direct Handling (Rubber Gloving) Procedures

## Cover-up practices (applicable to ALL primary voltages) cont.

- c. When an energized primary conductor is placed on a cross arm, bracket, or against the pole, the conductor shall first be covered with line hose, and in addition, the cross arm, bracket, or pole shall be covered with a rubber blanket or other approved insulation.
- d. Intentional contact with energized lines or rubber protective equipment shall be with rubber gloves only. Other parts of the body should be kept clear of energized lines or rubber protective equipment.
- e. Rubber protective cover-up equipment is to be used to provide protection against incidental contact with sources of potential, and is not intended for use as support, balance, leverage, or handholds.

# Direct Handling (Rubber Gloving) Procedures

## Cover-up practices (applicable to ALL primary voltages) cont.

- f. The insulated boom and/or bucket of an aerial device should not come in contact with unprotected conductors or grounded objects when rubber gloving work methods are being used.
  
- g. Work limited to one phase at a time - Work being performed on energized conductors and/or equipment in the same work area shall be confined to one phase of the circuit at a time. Simultaneous contact with multiple phases or a phase and any part of the structure is not permitted.

- When using approved hot line hoists (web jacks, blocks, rope, winch line or similar devices) an approved insulating link stick shall be installed between the hot line hoist and an attachment point with a different potential. Care should be exercised to maintain link sticks in good mechanical and electrical condition.
- Defective link sticks shall be turned in for testing, repair and/or replacement.
- Link sticks are required for 2.4 kV and 4 kV under similar conditions.

Specific operations requiring continued use of approved live line tools include, but are not limited to, the following:

1. Cutout/disconnect opening and closing.
2. Energizing of transformer primary connections.
3. Primary connection of lightning arresters.
4. Use of “load buster” tool.
5. Operating regulator bypass devices.
6. Whenever energizing equipment and/or conductors.
7. Attaching portable grounds.

## GROUNDS AND EPZ

**An Equal Potential Zone (EPZ) must be established around any and all workers before any conductor or line can be treated as dead and grounded. This equal potential zone must be set up in accordance with UI Company Procedure (OP-D72).**

- Under no conditions should anyone ever assume that a line or a piece of equipment is de-energized, unless it is properly tested, grounded, and tagged.**

### ***LOAD REDUCTION / SHEDDING***

*Ed Delmonte*

*Transmission Operations Lead Engineer*

# Transmission & Distribution Operations and Maintenance Department

Transmission System Abnormal Conditions and/or  
Capacity Deficiency Plan  
and how it relates to UI's distribution system

- Who are FERC, NERC , NPCC , ISO and CONVEX
- ISO Master/Local Control Center Procedure No. 2
- ISO OP 2,4,6, 7

# Who are they and what do they do?

## FERC- Federal Energy Regulatory Commission

- They define ISO's authority and the services it provides
- Approves and mandates rules that guide ISO responsibilities
- NERC-North American Electric Reliability Corporation
  - *Develops and ensures compliance with mandatory planning and operating power system standards*
  - *Can Levy fines of \$1,000.00 to 1 Million per day per violation*

## NPCC- Northeast Power Coordinating Council Inc.

- Develops , implements and enforces criteria for the design and operation of interconnected power system
- ISO New England- Independent System Operator
  - *Ensure that the regional Transmission system can reliably deliver power to consumers under a wide range of present and future system conditions*
  - *Develop and follow procedures to meet numerous stringent long term/ short term reliability standards*

*The United Illuminating Company*

# Definition of Abnormal Conditions

Judgment made by ISO or CONVEX when abnormal conditions exist (or anticipated) that will degrade the reliability of the bulk power supply such as:

- Forecast or actual shortage of Operating Reserves requiring implementation of ISO OP-4 or OP-7, CONVEX OI-4 , OI-7, UI OPE-04, OPE-07

- Low transmission voltages and/or low reactive reserves (OP-12 Appendix A)
- Inability to provide first contingency protection when undesirable post-contingency conditions might result (i.e., load shedding required post-contingency)
- Cold Weather Event declared
- Credible threats to power system security such as: SMD, sabotage or approaching storms
- Other conditions at ISO-NE or LCC discretion

- Master Local Control Center Procedure No. 2 (M/LCC 2) - Abnormal Conditions Alert, is used to alert applicable power system operations, maintenance, construction and test personnel as well as each applicable Market Participant (MP) when an abnormal condition affecting the reliability of the power system exists or is anticipated.
- Once notified of an M/LCC 2 Abnormal Condition Alert, these entities are expected to take precautions so that routine maintenance, construction or test activities associated with any generating station, Dispatchable Asset Related Demand (DARD), Real-Time Demand Response, Real-Time Emergency Generation, transmission line, substation, dispatch computer, and communications equipment do not further jeopardize the reliability of the power system.
- If a maintenance, construction or test activity could jeopardize the reliability of the power system such activity shall be stopped and/or postponed during the M/LCC 2 Abnormal Condition Alert.

# M/LCC 2 may be implemented by:

- ISO-NE for abnormal conditions affecting New England-wide reliability.
- Individual LCCs for abnormal conditions that affect a single LCC's reliability. If UI has a significant event, CONVEX will declare M/LCC2

This procedure establishes criteria and guides for actions during capacity deficiencies, as directed by ISO New England (ISO) and as implemented by ISO and the Local Control Centers (LCCs). This procedure may be implemented any time one or more of the following events, or other similar events, occur or are expected to occur:

## Examples of actions during OP-4 are:

- Voluntary load curtailment ( UI OP-E08)
- ISO Load response program
- 5% system wide voltage reduction( UI OP-E02)

The United Illuminating Company

# OP-07 - Action in an Emergency

This Operating Procedure (OP) establishes criteria to be followed in the event of an operating emergency involving unusually low frequency, equipment overload, capacity or energy deficiency, unacceptable voltage levels, or any other emergency that ISO New England (ISO) deems appropriate in an isolated or widespread area of New England. The objectives in establishing these emergency actions are:

1. *To protect reliable operation of the Eastern Interconnection.*
2. *To restore balance between customers' load and available generation in the shortest practicable time.*
3. *To minimize risk of damage to equipment.*
4. *To minimize interruption of customer service*

# OP-07 - Action in an Emergency

If we are experiencing a Transmission Line over load condition , UI will Manually shed load by supervisory . This is a special SCADA display that will shed load based on what is needed. The display shows the operator “blocks” of load that can be shed. The customer circuits for this procedure are reviewed each January based on previous year’s load.

- Automatic Under frequency Shedding for low frequency condition
- Goal is to return frequency to 58.5 Hz in 10 seconds and 59.5 Hz in 30 seconds for generator loss of up to 25% of load.

Stage 1	59.5 Hz	7%	300 ms
Stage 2	59.3 Hz	7%	300 ms
Stage 3	59.1 Hz	7%	300 ms
Stage 4	58.9 Hz	7%	300 ms
Stage 5 (anti-stall)	59.5 Hz	2%	10 s

The United Illuminating Company

# OP-6- System Restoration

- This procedure addresses restoration of the Bulk Electric System (115 kV and above) after a partial or complete system blackout. Expeditious restoration of the Bulk Electric System depends on independent actions and interactions by Market Participants, Local Control Centers (LCCs) and ISO New England (ISO). Depending on the expanse of the blackout (local area or widespread) numerous Market Participant and LCC restoration procedures, and this procedure, may need to be implemented simultaneously. NPCC Regional Reliability Directory #8 System Restoration provides more detailed information on how system operators should establish and maintain Inter-Area tie lines.
- During system restoration, a high priority must be given to the restoration and reliability of the Interconnection as well as restoration of off-site AC power sources to nuclear Generators. Also, technical aspects of system restoration (i.e. Generator startups, load pickups, switching surges, voltages, frequency, synchronization of islands, etc.) will be crucial. Recognizing these concerns, this procedure and all LCC restoration procedures have been developed in a coordinated fashion.

# How are we notified when we have a problem

- Phone Calls
  - ISO to CONVEX to UI Operations center to UI folks listed in OP's

- Text Messaging
  - ISO
  - CONVEX

- Email alerts
  - ISO
  - CONVEX

# UI Electric T & D

## Utility Exchange Program (*Pakistan Distribution Companies*)

### ***TRANSMISSION & ASSET PLANNING***

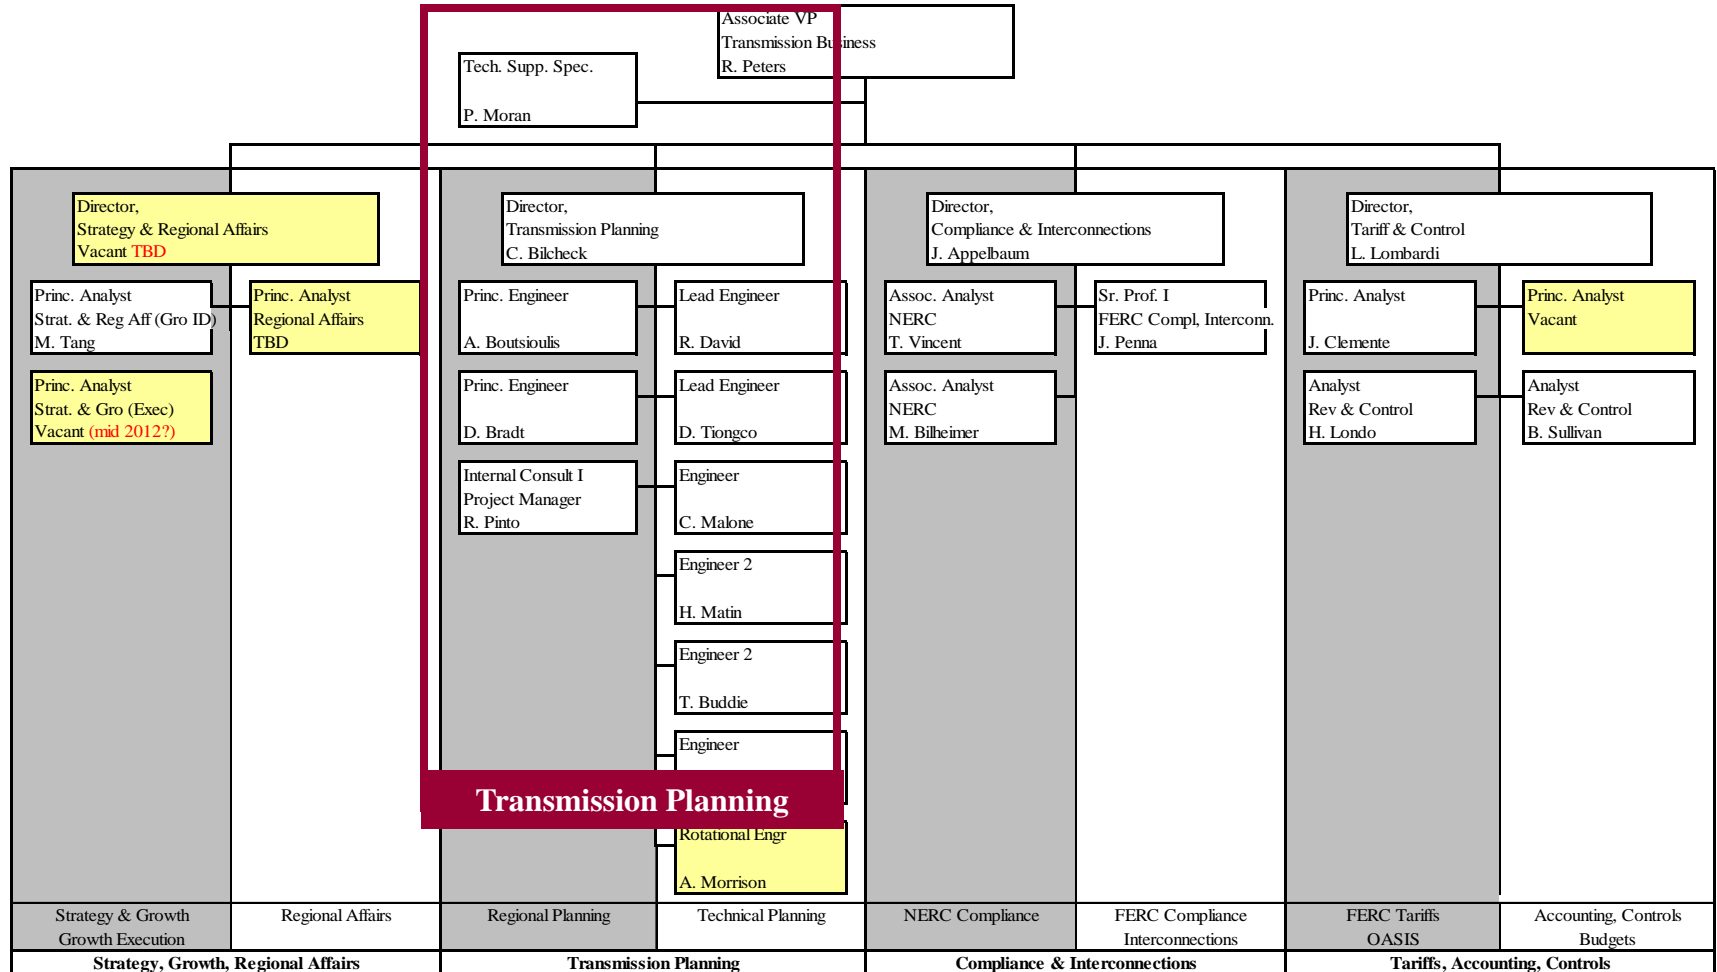

*Christian Bicheck*

*Director, Asset Planning Transmissions*

# The Transmission Business Organization

## The Planning Team

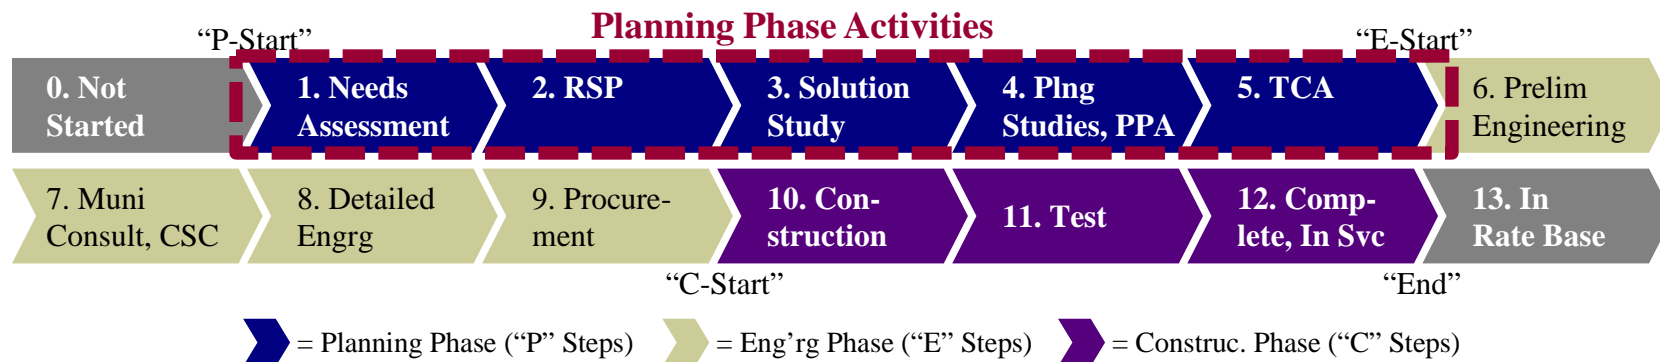

UI's Transmission Asset Planning Department is responsible for effectively planning the electric transmission system to assure its customers receive safe, reliable and cost-effective transmission service, in support and in compliance with NERC, NPCC, ISO-NE and UI reliability criteria, standards and procedures.

Front row left to right: Dave Bradt, Tonya Buddie, Hasan Matin  
Back row left to right: Richard David, Dindo Tiongco, Chris Malone, Chris  
Bilcheck,  
Rich Pinto, Alex Boutsoulis

# UI must follow NE's Planning Process

- (1) **Needs Assessment:** System needs must be studied and well-documented. Study scope, assumptions, procedures and findings are presented to ISO and the New England Stakeholder group (i.e., "PAC")
- (2) **RSP ("Regional System Plan"):** A transmission project that is being considered as a potential solution to meet the identified need, but for which there is little or no analysis available to support. As projects become more real/ defined, regular updates are made to the RSP (e.g., cost estimates, projected in-service dates) and to PAC.
- (3) **Solution Study:** Strive to identify the most cost-effective and reliable solutions for the region that meet the identified need. Findings and recommendations of this evaluation of alternatives is vetted through ISO and the PAC.
- (4) **Planning Studies, PPA:** System impact studies have been performed to show the transmission project has "no adverse impact" on the reliability or operability of the transmission system.
- (5) **TCA ("Transmission Cost Allocation"):** Formal process to seek New England-wide recovery of the costs for transmission projects that are part of the "pool" (i.e., "PTF")

# Needs Assessments are Initiated to Comply with Mandatory Reliability Standards

---

## **Federal Power Act (1935), Energy Policy Acts of 1992/2005:**

- **Federal oversight of Transmission**
- **Authorized FERC to ensure Transmission System reliability**
- **FERC authorized NERC to establish and implement standards**

## **Reliability is defined by resource adequacy and security**

- **Resource adequacy is to ensure sufficient supply**
- **Security is the ability of the power system to withstand contingencies and events**

## **NERC reliability standards are mandatory**

- **NERC has defined over 800 mandatory requirements**
- **Penalties for non compliance - reliability violations can result in fines up to \$1 million/day**

## **NPCC and ISO-NE**

- **Regional focus**
- **Includes NERC requirements**
- **Ensure adequate resources and transmission to meet electricity demand**

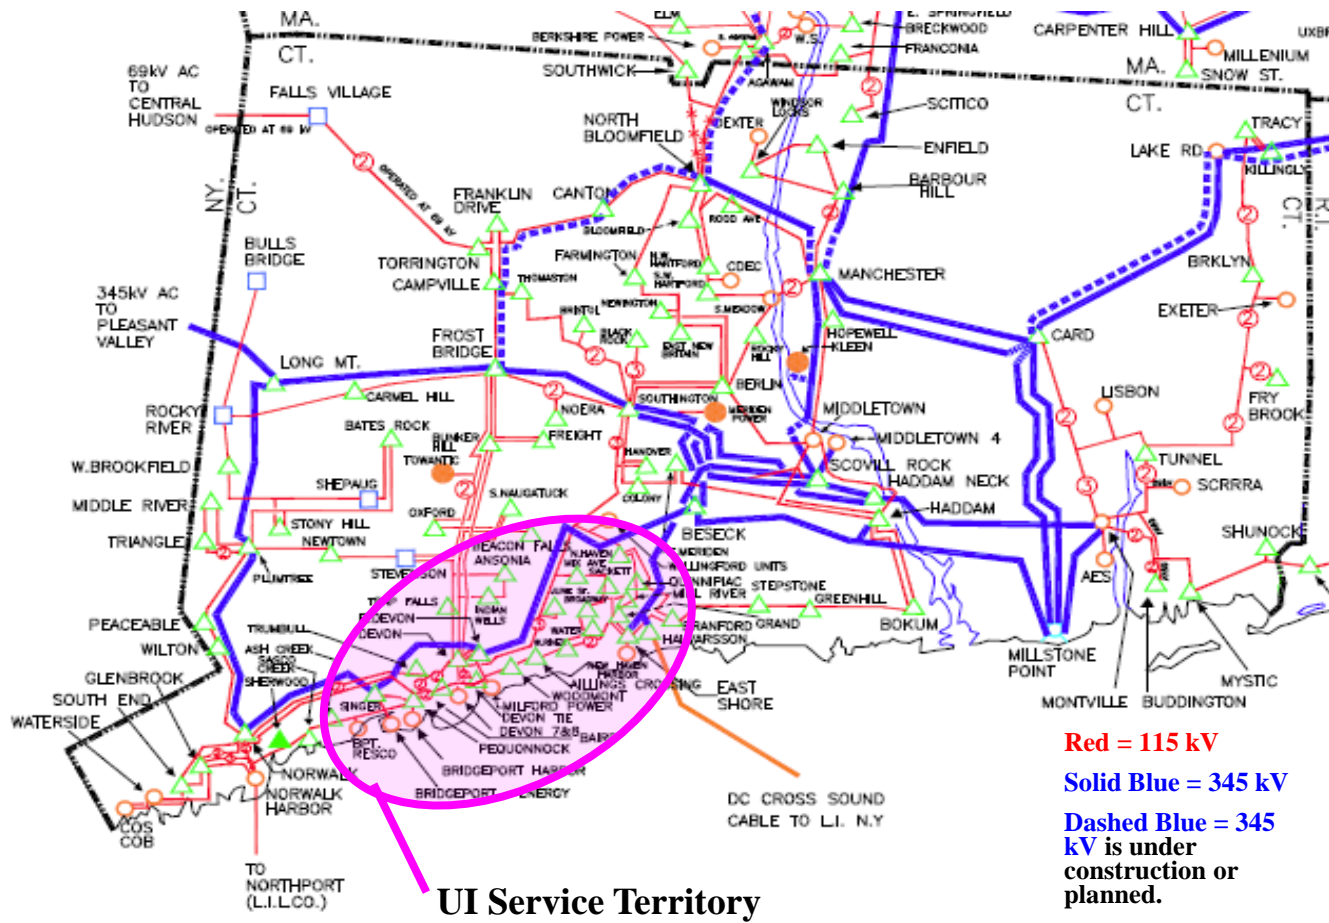

The United Illuminating Company

# Connecticut is Integrated as Part of the NE System; Coordinated studies with ISO-NE/NU are needed

# Needs Assessments also initiated from other concerns; Close coordination with D-Planning and T&S Engineering

## Customer Load Growth

## Aging Infrastructure

## System Additions/ Retirements

## Adequacy of Design

## Many Solution Studies are currently in progress

---

- SWCT II Coordinated Study; solutions are being developed for:
  - New Haven Area line overloads and voltage collapse concerns
  - Railroad line overloads
  - Bridgeport cable overloads
  - Old Town/ Hawthorne weak transmission voltage
  - Naugatuck Valley overloads and voltage collapse concerns
- Pequonnock Fault Duty Mitigation
  - Many years in development to get to preferred solution
  - Storm surge exposure/ risk impact
- Old Town and Baird Substation Upgrades or Replacement
  - Many upgrades (T&D) required at each substation
  - Evaluation of a complete station replacement vs. component upgrades

## Examples of Projects that have recently moved through the Planning Process

---

- **Water Street and West River Fault Duty Mitigation:** Bus system and ground grid upgrades completed in 2011
- **Capacitor Bank TRV Mitigation:** East Shore completed in 2011, North Haven to be completed in 2012
- **Devon Tie BPS Compliance:** Completed in 2011, met UI's implementation plan schedule to NPCC to comply with BPS design requirements
- **East Shore OCB/Switch Replacements:** Phase 1 completed in 2011, Phase 2 ISD summer 2014. Received approval for 100% regional cost allocation.
- **8300 Line Reconfiguration Project:** Construction to start this fall with summer 2014 ISD. Need identified from SWCT study. Currently in cost allocation approval process.
- **Shelton Substation:** Has received technical approval at ISO, currently in preparation for siting approval, planned 2014 ISD. Need driven by area load growth and voltage collapse concerns
