

# THE QUEST CCS PROJECT

US Energy Association  
Washington, DC  
September 26, 2012

Shell Upstream International  
Bill Spence – Manager Strategic Issues

# DISCLAIMER STATEMENT

- The companies in which Royal Dutch Shell plc directly or indirectly owns investments are separate entities. In this presentation the expressions “Shell”, “Group” and “Shell Group” are sometimes used for convenience where references are made to Group companies in general. Likewise the words “we”, “us” and “our” are also used to refer to Group companies in general or those who work for them. The expressions are also used where there is no purpose in identifying specific companies.
- The information contained in this presentation contains forward-looking statements, that are subject to risk factors which may affect the outcome of the matters covered. None of Shell International B.V., any other Shell company and their respective officers, employees and agents represents the accuracy or completeness of the information set forth in this presentation and none of the foregoing shall be liable for any loss, cost, expense or damage (whether arising from negligence or otherwise) relating to the use of such information.
- All copyright and other (intellectual property) rights in all text, images and other information contained in this presentation are the property of Shell International B.V. or other Shell companies. Permission should be sought from Shell International B.V. before any part of this presentation is reproduced, stored or transmitted by any means.

  - Location, Scope & Funding
  - 'Hardware'
  - Storage
  - Regulator & Stakeholders
- Adding 'Use' to CCS

# THE CORPORATE CONTEXT

The majority of the science community is in agreement that rising CO<sub>2</sub> levels will result in dangerous climate change

To a 'carbon based' company, this is more risk than opportunity

As a result it appears on the corporate risk matrix

We focus upon 4 Pillars in our response to the challenge – Natural Gas, CCS, Biofuels, Own Energy Efficiency

A short list of business controls have also been implemented

# HOW IS THE WORLD MOVING FORWARD?

## SHELL ENERGY SCENARIOS TO 2050

### SCRAMBLE

Policymakers pay little attention to more efficient energy use until supplies are tight. Likewise, ***greenhouse gas emissions are not seriously addressed until there are major climate shocks.***

OR

### BLUEPRINTS

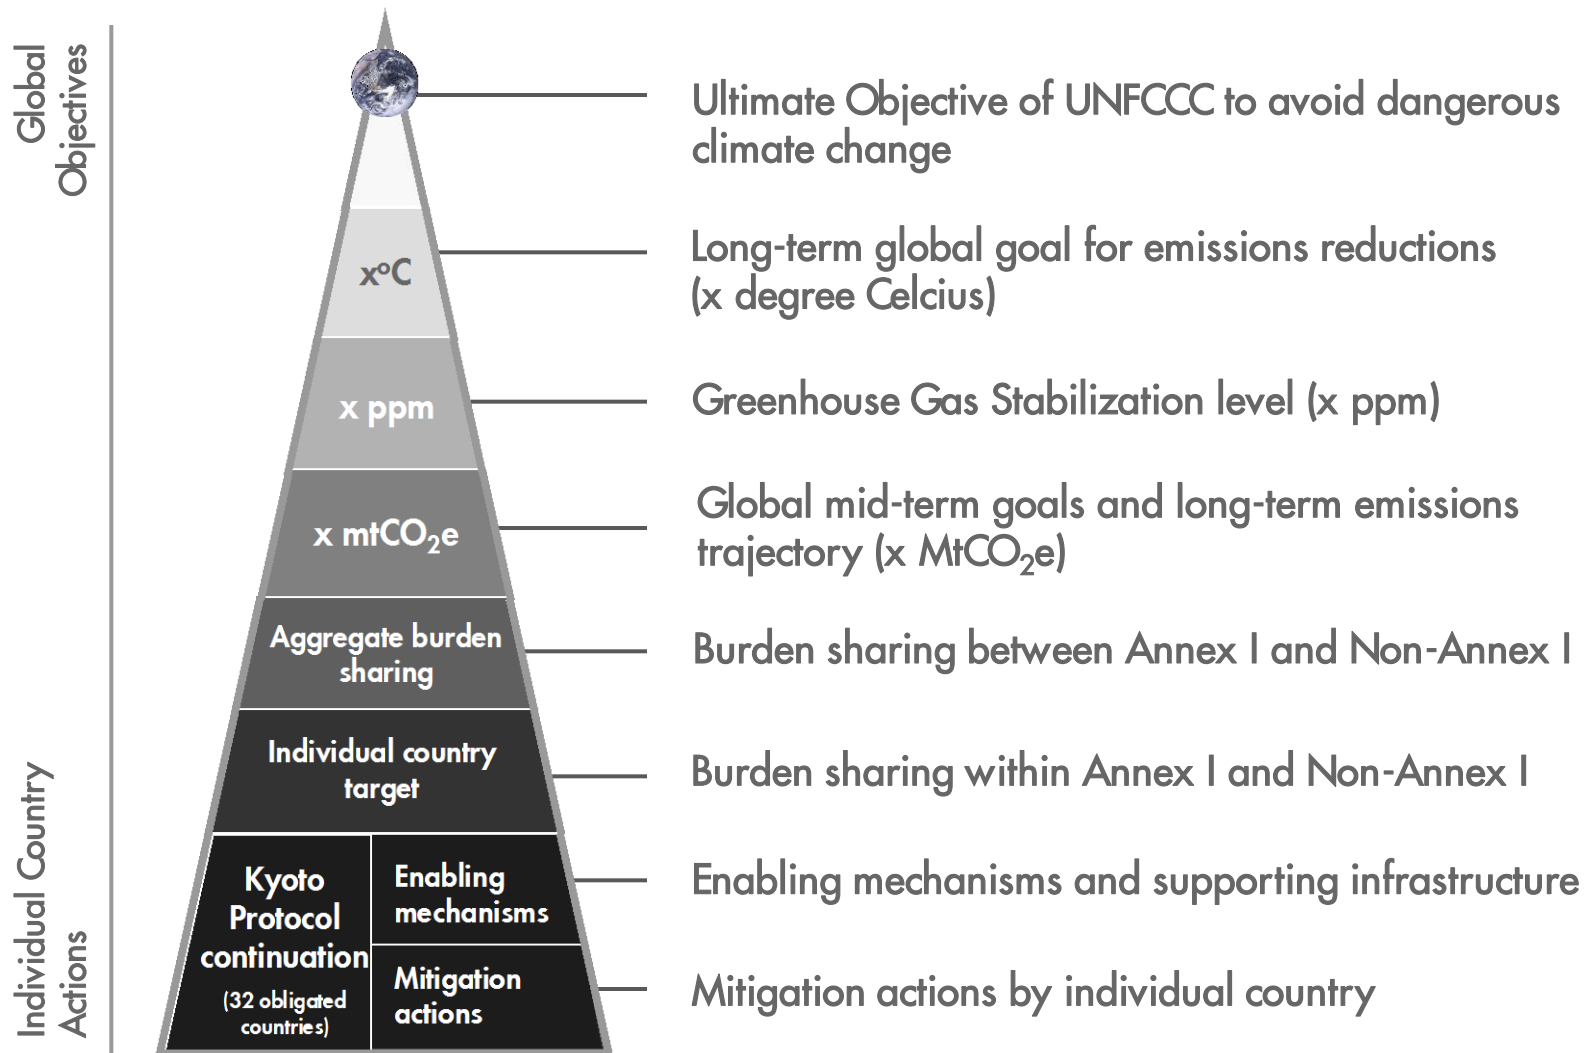

Local actions address the challenges of the economy, energy and environmental. A price is applied to CO<sub>2</sub> emissions giving a huge stimulus to the development of clean energy technologies, such as CCS, and energy efficiency measures. The result is far lower CO<sub>2</sub> emissions.

***Regulatory frameworks to encourage lower CO<sub>2</sub> emissions are in place early.***

# OVERVIEW

- The Corporate Context
- The Shell CCS Programme
- The Quest CCS Project
  - Location, Scope & Funding
  - 'Hardware'
  - Storage
  - Regulator & Stakeholders
- Adding 'Use' to CCS

# QUEST - LOCATION

# GENERAL FEATURES

- Quest CCS Project - fully integrated CCS (capture, transport & storage)
- JV among Shell (60%); Chevron (20%); and Marathon (20%)
- Located at Scotford Upgrader Complex
- 35% reduction of Upgrader CO<sub>2</sub> emissions
- Uses existing technology
- Capacity to capture over one million tonnes of CO<sub>2</sub> per year for 25 years
- Equiv to emissions from 175,000 cars

# COSTS/REVENUES AND FUNDING AGREEMENTS

Content

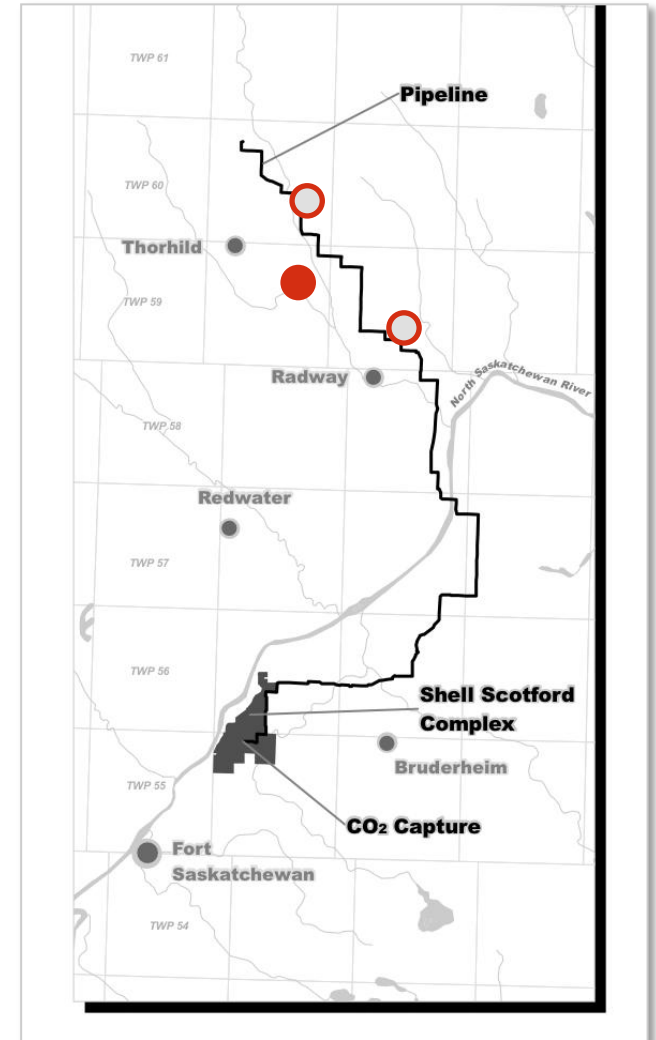

- Revenues – GHG offsets (credits)
  - Net amount – stored CO<sub>2</sub>, less direct and indirect emissions
  - Multiple credits assigned as a demonstration project
  - Credits to be used by Shell's Alberta assets for regulatory compliance
- Government Funding Support – Cdn\$865 million
  - Cdn\$120 million Canadian Federal Government (Pre FID)
  - Cdn\$745 million Alberta Province (Construction, Startup and 10 years operation)
  - Extensive knowledge sharing
  - Stringent monitoring (MMV) plan
  - NPV Zero commitment

SHALE SEALS

TARGET FORMATION

# HARDWARE

- Quest CCS Project CO<sub>2</sub> capture plant located in Fort Saskatchewan, approx 50 km N.E. of Edmonton, Alberta
- Capture at the Scotford Upgrader from 3 Hydrogen Units (SMR), Amine system
- CO<sub>2</sub> transported by 12 inch pipeline to storage, with 6 inch laterals
- The pipeline will travel approx. 65 km north of the Scotford Upgrader to the chosen injection locations
- Route selected to meet stakeholder requirements:
  - 28 km follows existing ROW
  - Drilled under North Saskatchewan River
  - 30+ re-routes to accommodate landowner wishes
- 3 injection wells

# CAPTURE 3D MODEL – HMU 1&2

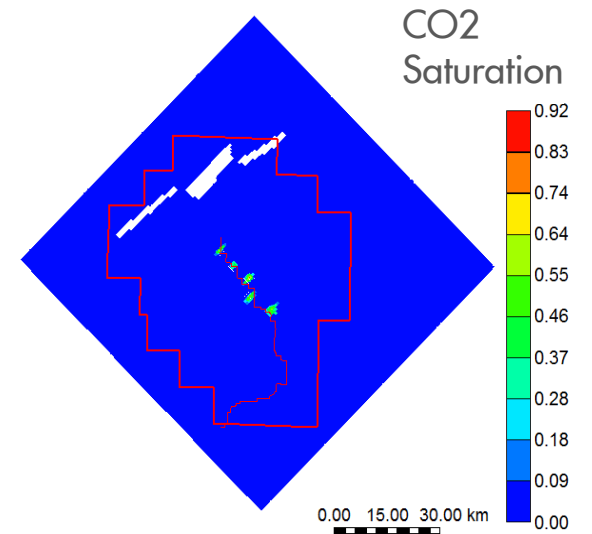

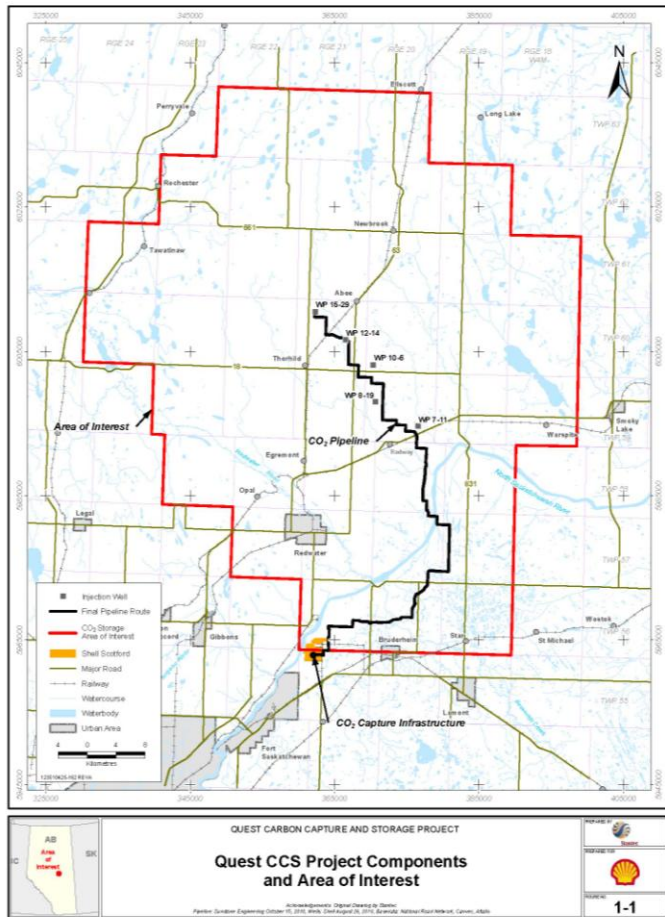

# STORAGE

- Saline aquifer storage
- Basal Cambrian Sands (BCS) selected
  - Storage zone is a formation called Basal Cambrian Sands (BCS) 2,300 m, Prairies deepest sandstone
  - Multiple caprock and salt seal layers, no significant faulting visible from wells or seismic
  - The BCS is well below hydrocarbon bearing formations and potable water zones in the region
  - Relatively few wells drilled into the BCS, none within 10 km of the proposed storage site
- Wells and Drilling
  - 3 well plan, 5 more if required
  - Conventional drilling methods
  - Multiple steel casings for wells, 3 in freshwater zone, all cemented to surface

# GEOLOGICAL FORMATION AREA OF INTEREST (AOI)

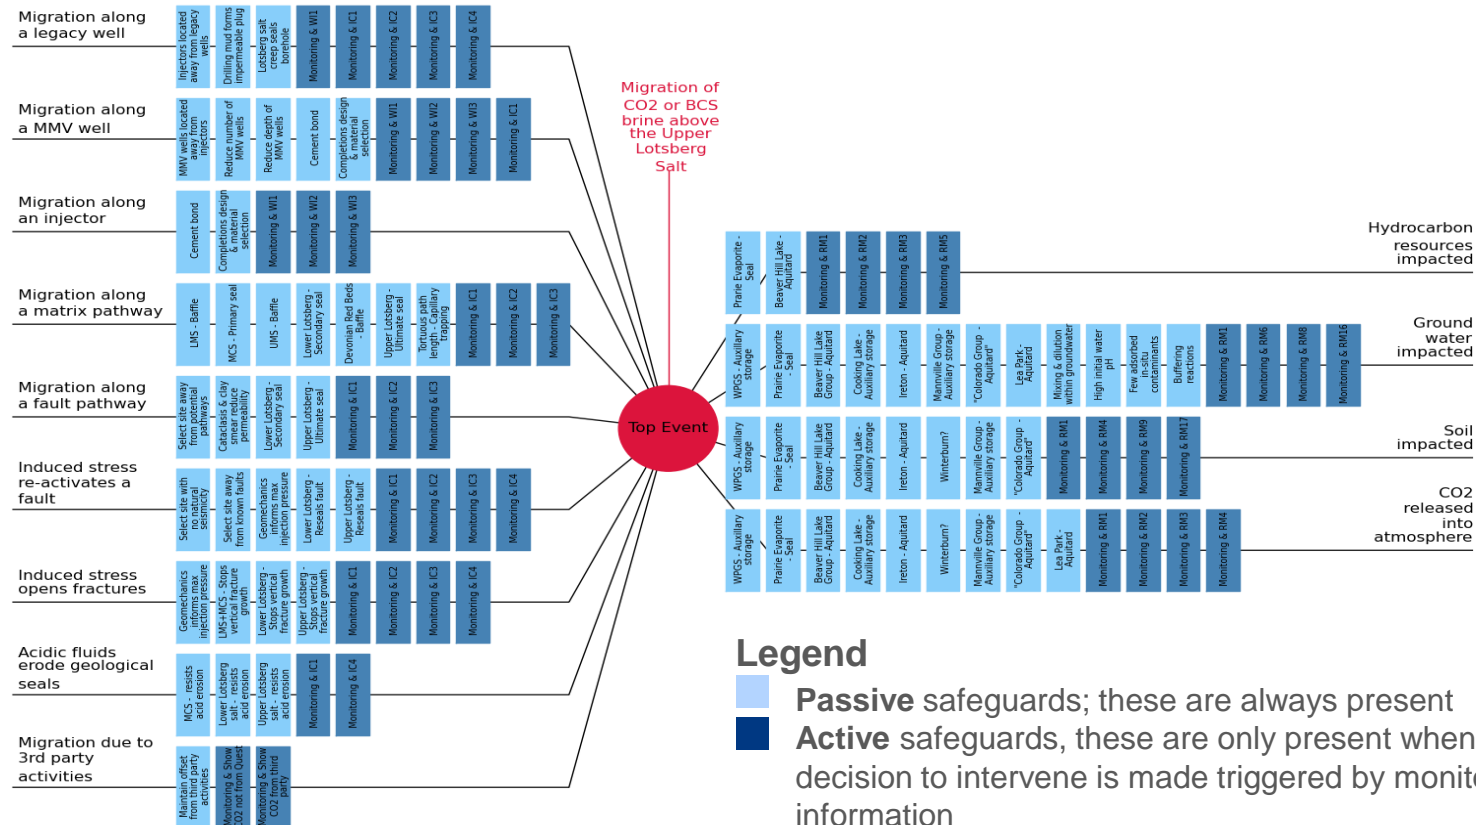

- Pore space area required to ensure no pressure front interference

# CCS RISK MITIGATION PLAN FOR THE WORST BUT OPERATE TO YOUR BEST

Measures to  
avoid a loss of  
containment

Measures to  
manage a loss of  
containment

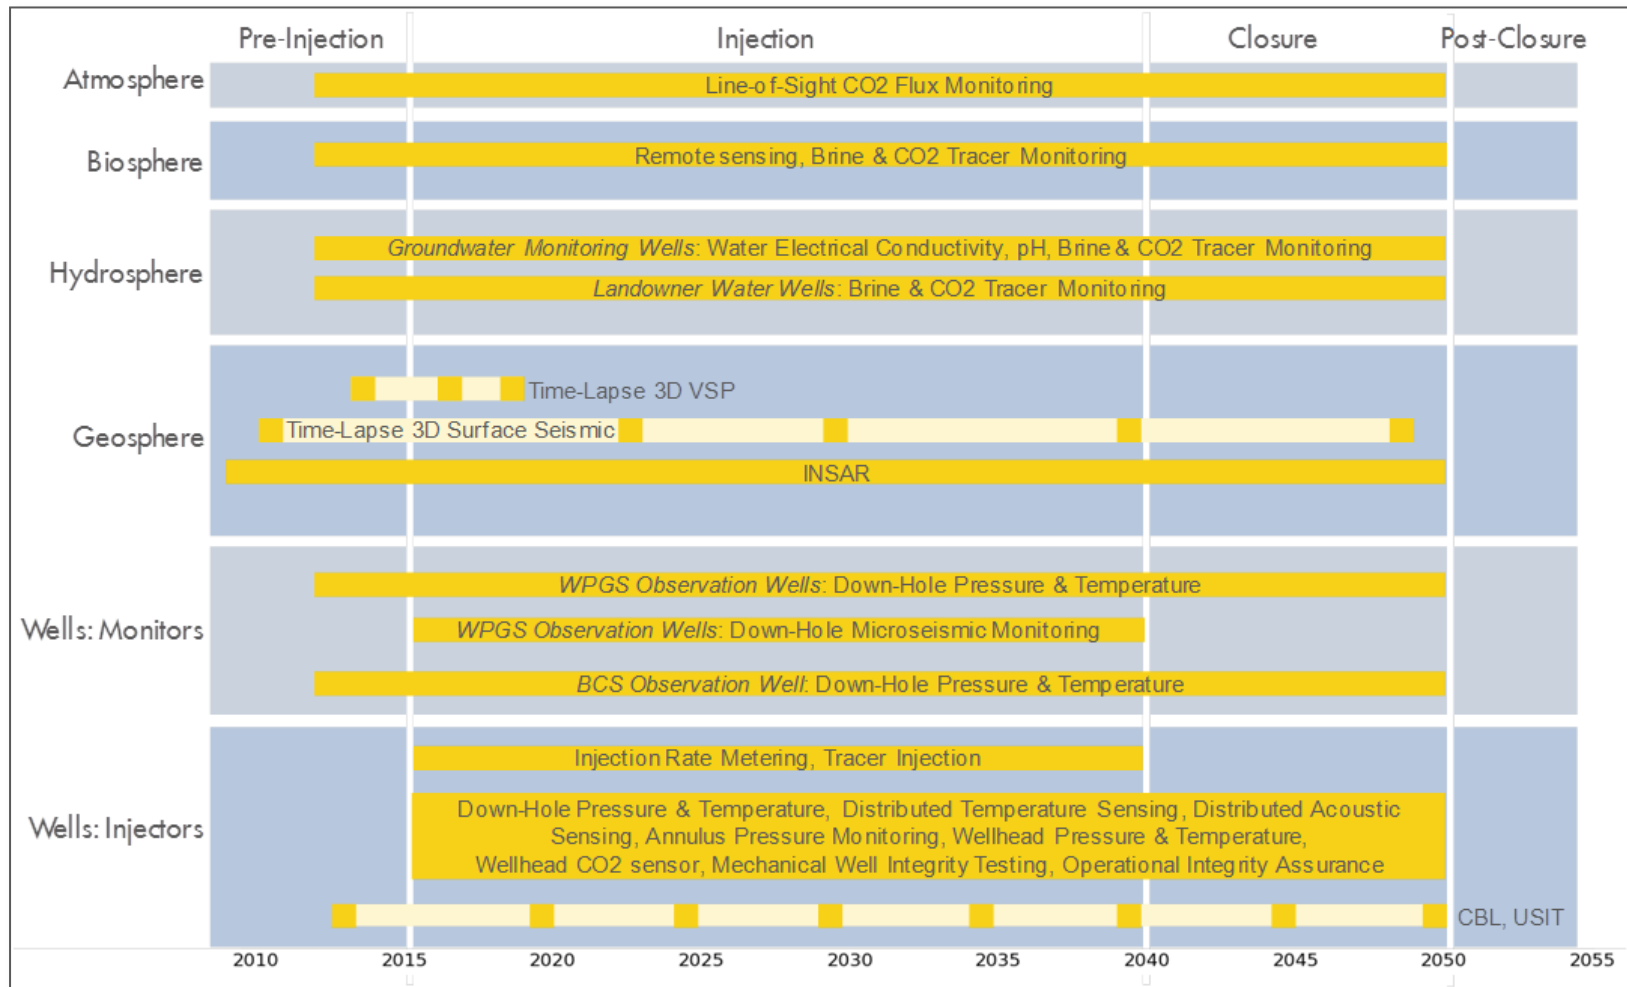

# CCS RISK MITIGATION WHEN HAVE YOU DONE ENOUGH

- Based on collective expert judgement
- Informed by appraisal data and feasibility studies

# MEASUREMENT, MONITORING AND VERIFICATION (MMV PLAN)

- Comprehensive plan developed – entire biosphere and lifecycle
- Independently (DNV) certified MMV and storage plan

# REGULATORY FRAMEWORK

- Provincial GHG framework established
  - CCS Act passed in Nov 2010, establishing overall structure
  - Pore space regulations in place with Quest successfully acquiring required area in May 2011
  - Participation in Regulatory Framework Assurance (RFA) process and GHG Offset Protocol revisions
  - No Federal framework to date – possible 2013
- Regulatory approvals near complete
  - Federal compliance required – EIA submitted, completed internal and public review
  - Bundled provincial application submitted – Upgrader amendment, Pipeline, Well and Storage
  - 3 rounds of Information Requests (200+) by provincial regulator, the ERCB
  - ERCB public hearing March 2012
  - Regulatory approval Q3 2012

# STAKEHOLDER ENGAGEMENT

- Extensive and continuous public engagement
  - 1<sup>st</sup> public project disclosure: Oct 2008 (booklet, news release and open house)
  - Stakeholder consultation program initiated Jan 2010
    - All landowners within 450 meters of either side of pipeline right of way
    - All landowners in storage AOI
    - All Landowners within 5 km of Scotford
    - Municipal districts/local authorities
    - Industry stakeholders
    - Provincial / Federal regulators
    - Aboriginal communities
  - Open Houses: March, November 2010 and September 2011
  - Quest Café's: June, October 2011
  - Bi-annual County and Town Council updates
  - Quest phone line, e-mail address and web site available for project questions

# STAKEHOLDER ENGAGEMENT RESULTS

## ■ General positive public response

- Large majority of open house visitors and comment cards positive
- Minimal public objections to project at ERCB hearing

## ■ Issues management

### ■ Issues raised by stakeholders:

- Pipeline /well / storage failure
- Pipeline routing
- Containment / leakage
- Groundwater contamination
- Perception; relatively new technology, unknown in the area
- Land use conflicts/ value
- Incident Management / emergency preparedness and safety

### ■ Face to face resolution where possible with concerned stakeholders

### ■ Project adjustments where possible (>30 pipeline re-routes)

### ■ All issues addressed at ERCB hearing

# CARBON CAPTURE USE & STORAGE (1/2)

## CO<sub>2</sub> EOR – TAKING A GAME WE KNOW INTO THE FUTURE

- Proven Technology
  - 30+ years experience
- Difference for the Future:
  - CCS support/integration
  - Use CO<sub>2</sub> from industry
  - Recovery improvements
  - Maximise CO<sub>2</sub> sequestration
- CO<sub>2</sub> EOR = storage ;
  - Pursue where possible
  - Note: significant upfront testing and capital required, especially offshore
  - Storage space limited compared to alternatives

# CARBON CAPTURE USE & STORAGE (2/2)

Shell Pernis Refinery CO<sub>2</sub> is captured and piped to green houses in The Netherlands.

Mineralisation technology combines CO<sub>2</sub> with natural minerals create stable marketable products.

CO<sub>2</sub> pure or flue gas

+

Minerals Ca or Mg
